1 Introduction

Questions that do not prime global solidarity show that this topic is not a salient concern for most people, which may explain why global redistribution proposals receives little attention in public debate, despite widespread acceptance.

Literature

2 Data and design

Samples. I conducted an original survey on 12,000 respondents representative of the adult population in eleven high-income countries (see Figure 1). The countries have been chosen to span the diversity of high-income countries and the sample sizes to be commensurate to these countries' population sizes.¹ The survey was fielded online in 2025 using the companies *Yandex* (for Russia), *Kantar* (for Saudi Arabia), and *Bilendi* (for the other countries).²

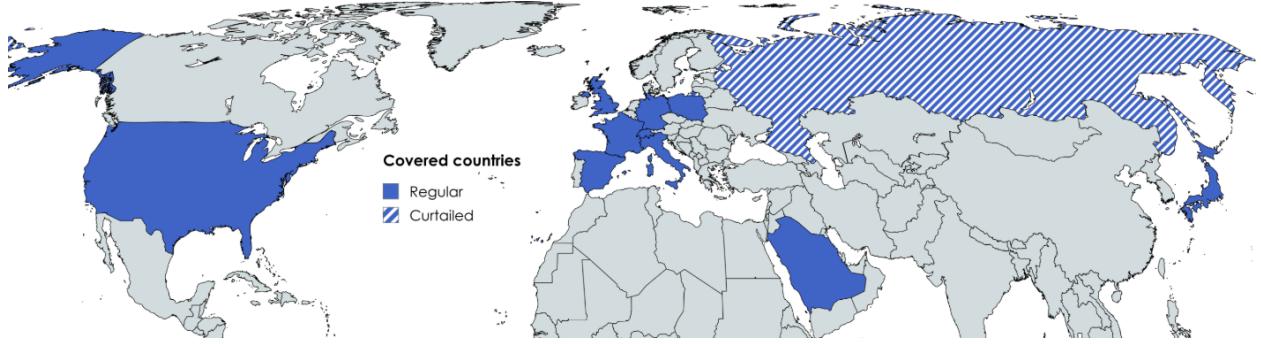

In Russia, the questionnaire was curtailed as I could not ask the same questionnaire as in the other countries, for two reasons. First, I could not use the platform *Qualtrics*, which prevented me from asking some question formats (such as constant sum scales) or from embedding Javascript (used to design an interactive question). Second, I had to cut or reword some questions due to preventive censorship by the survey company. In the

¹The sample sizes are as follows: U.S.: 3,000; Japan: 2,000; Russia: 1,000; Saudi Arabia: 1,000; Europe: 5,000, split in proportion to the countries' adult population size (except for Switzerland), that is France: 798; Germany: 1,048; Italy: 756; Spain: 603; Poland: 500; Switzerland: 469.

²For all countries but Russia, responses were collected between April 15 and July 3, 2025. For Russia, responses were collected between September 19 and TODO, 2025. Each complete response is rewarded around €3 in gift points.

other countries, the questionnaires are almost identical, though the figures in questions are adapted to the country context (e.g. when informing about the cost of the Global Climate Scheme to the average person of the country). Appendix ?? lists the specificities of the questionnaire in each country.

Figure 1: Country coverage of the survey.

Representativeness. The samples are stratified to be representative of the country's adult population along the following quota variables (with some exceptions³): gender, age (5 brackets), income (4), diploma (3), region (2 to 5), and urbanicity (2 to 3). Tables S1-S4 in Appendix C show that our samples match the actual population frequencies along these dimensions, except for Saudi Arabia (where non-Saudis and non-high-school-educated people are underrepresented) and Russia (where TODO). All our results are reweighted to be fully representative of the population along our quotas (with weights trimmed between 0.25 and 4). Results aggregated at the global or European levels weigh each country in proportion to its adult population size.

Appendix Figure S59 shows that 11% to 17% of the variance of our main attitudinal outcomes is explained by sociodemographic variables, and this share falls below 5% after accounting for country and vote. In other words, even though variables such as age or diploma are sometimes significantly correlated with attitudes (see Tables S5-S6), difference in average acceptance of a policy between (say) age groups rarely exceeds a dozen percentage points.

Appendix J shows how our main attitudinal outcomes vary by political leaning. Non-voters exhibit attitudes close to the center of the political spectrum. Besides, attitudes are much less polarized in Japan compared to Europe and the U.S. Appendix Figures

³In the U.S., I also use race (4 categories) as a quota variable. In Saudi Arabia, I do not use urbanicity, but I use citizenship (Saudi vs. non-Saudi). In Russia, I do not use region nor urbanicity.

[S57-S58](#) show how our samples compare to reality in terms of vote in the last election. While the share of declared non-voters is lower than in reality, votes along the three main political leanings are close to reality. Appendix [K](#) shows that our main results are robust to reweighting by vote.

Data quality. The median survey duration is 17 minutes (13 min in Russia). Best practices have been used to ensure top-notch data quality. The questionnaire has been worded in a neutral and informative way;⁴ tested on random people in public spaces to make sure it is correctly understood; translated by professional translators, with figures converted into national currencies, and double-checked by native speakers.

Of all respondents who started the questionnaire, only TODO % dropped out. TODO respondents were allowed to pursue the survey (as their quotas were not full) and did not drop out. The final sample is obtained after excluding of this extended sample TODO % of respondents for suspicion of low quality: % for failing an attention test and % for answering the questionnaire in less than 6 min (including % for both reasons). Appendix [G](#) checks for differential attrition and Appendix [L](#) shows that our main results replicate on the extended sample.

Whenever possible, the order of question items is randomized. Appendix [M](#) studies the effect of item order on answers. The item order generally has a significant but small effect (2 to 10 p.p.). The size of the effect help identify questions for which opinions are strongly held (e.g. the preference of a sustainable scenario over the status quo) *versus* weakly held (e.g. the preferred amount of climate finance).

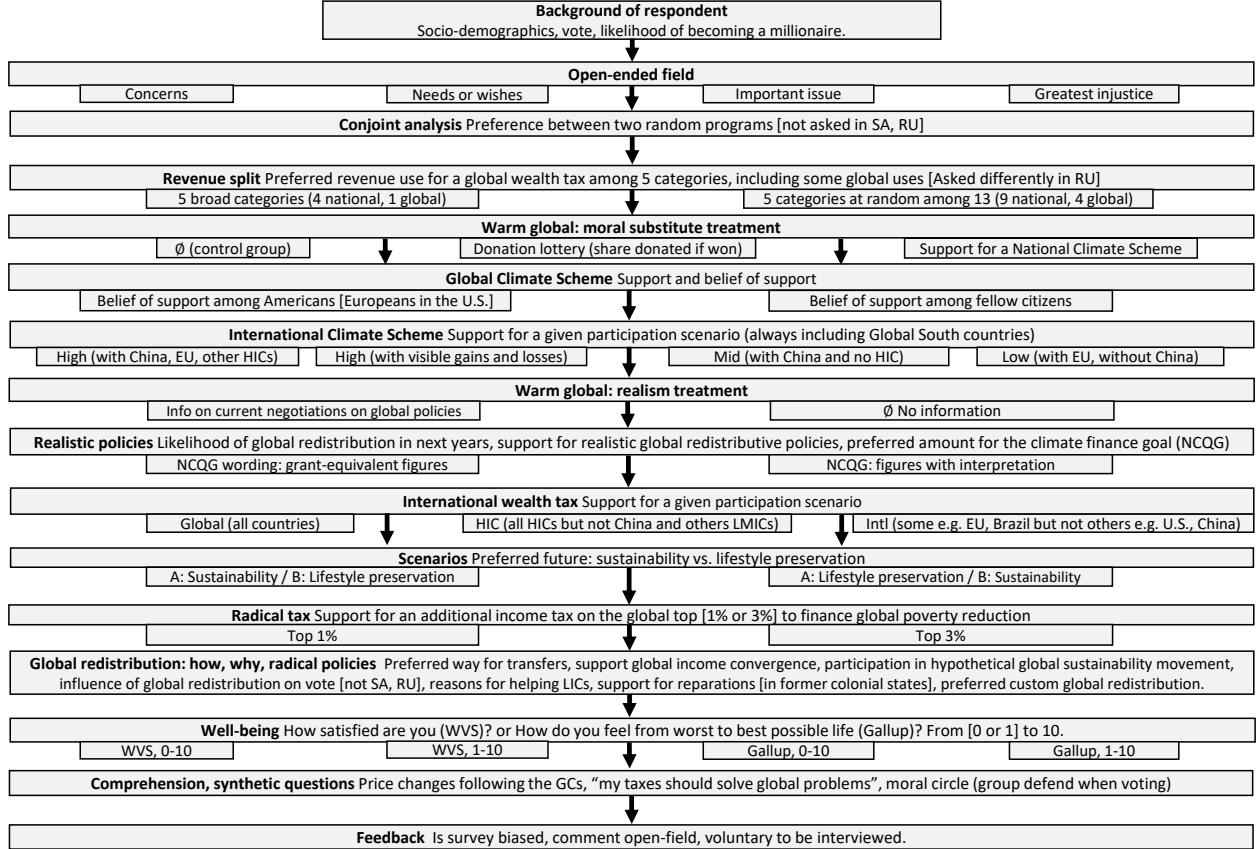

Appendix [F](#) compares the answers of two attitudinal questions asked in other surveys: the overall averages differ by 2 to 4 p.p. and their cross-country correlation is high: .70 ([Global Nation 2023](#)) to .86 ([Cappelen et al. 2025](#)).

Incentives. The questionnaire includes three incentivized questions, each awarded with a \$100 prize for one randomly drawn winner. First, a comprehension question on the Global Climate Scheme (GCS) checks whether respondents have understood the policy's cost. Second, a donation lottery where respondents choose what part of the prize they would donate to a reforestation NGO, should they win the lottery. Third, a question on the perception of the actual support for the GCS, which rewards a correct guess.

⁴At the end of the survey, 70% of the respondents find it politically unbiased (Appendix Figure [S54](#)).

Survey structure. While Appendix B provides the full questionnaire, Figure 2 depicts the survey flow with all random branches. The various treatments are all independent and uniformly distributed. Whenever there is a treatment, the acceptance levels reported are computed on the control group. Appendix I runs placebo tests to check whether earlier treatments have an effect on unrelated outcomes.

Figure 2: Survey flow.

After sociodemographic characteristics, the questionnaire starts with broad questions to grasp the prioritization and salience of global solidarity before the respondents can understand the survey's topic. First, open-ended fields on either their main concerns, wants, issues of interest, or perceived injustices. Second, a conjoint experiment where respondents have to select their preferred political program, or abstain. Both programs are random: each policy (or absence of policy) in five policy domains is taken at random from a pool of policies prominent in the country's public debate. Third, respondents are asked to allocate the revenue of a global wealth tax between five (national or global) spending items.

Then come attitudinal questions on the main policies studied: a *Climate Scheme* at the national, global, or international level; an international wealth tax funding low-income countries; and ten plausible global solidarity policies. These questions include treatments that vary the international coverage of policies or test for warm glow.

The last part of the questionnaire explores attitudes towards more radical global redistribution scenarios and include more sophisticated questions, such as an interactive task where respondents can choose their preferred custom redistribution of global incomes by manipulating sliders.

Finally, the survey concludes with a comprehension question, synthetic questions (e.g. on moral circle) and a feedback field.

Pre-registered hypotheses and data availability. The project is approved by the CIRED institutional review board (IRB-CIRED-2025-2) and was preregistered in the Open Science Foundation registry (osf.io/7mzn4). The study did not deviate from the registration: the questionnaires and the hypotheses tests used are the ones *specified ex ante*. All data and code as well as figures of the paper are available on github.com/bixiou/robustness_global_redistr.

3 Salience and prioritization of global solidarity

In this Section, I analyze the salience of global solidarity in undirected open-ended fields; and the prioritization of global programs in a budget allocation task.

3.1 Top-of-mind considerations

At the beginning of the survey, respondents are randomly assigned one open-ended question among four: their main concerns, their needs or wishes, an issue important to them but neglected in public debate, or the greatest injustice of all. The questions are deliberately broad and vague to let respondents express their top-of-mind considerations without any priming.

To analyze the answers, I automatically translated each field into English.⁵ Then, I used AI and my own reading of a few hundreds answers to identify the most common concepts, from which I selected 27 categories. Then, I classified each answer into one or more of these categories, both manually (Figures S3-S6) and automatically using AI

⁵I used onlinedoctranslator.com, which is powered by *Google Translate*.

(Figure S2). Finally, I manually defined a list of 47 (conjunction of) keywords and used it to automatically classify all answers.⁶ I report occurrences of the 24 most common keyword matches in Figure S1.

The three different classification methods yield consistent results but differ in accuracy. While the keyword classification allows an exact and reproducible search, the automatic search is not bound to specific words and captures more matching responses. Overall, it seems that the manual classification provides the most accurate results, with a number of matches generally between the two other methods. For example, to the *injustice* question, 1.3% of answers match the keywords for *global inequality* and ChatGPT identifies this category in 8.5% of answers, *versus* 3.7% according to my manual coding.⁷ Indeed, the AI incorrectly classifies unspecific answers like “poverty” in this category,⁸ while the keyword search misses answers like “inequality among humans”. Given this observation, I use the manual classification as the benchmark and the two other methods as robustness checks.

While less accurate than the classifications, wordclouds (Figure 3) provide a simple visualization of the most common concepts in each question. By far, the most frequent *concerns* or *wishes* of respondents relate to their purchasing power, with concepts such as “money”, “inflation”, the “cost of living”, or “financial stability” mobilized in 30% of these fields. Within country, the share of people concerned with money decreases with income: it ranges from 21% in the top income decile to 36% in the bottom one. The next most frequent *concerns* are health (or the healthcare system), far right governments (or related concepts such as “Trump” or “trade tariffs”), and war (either in general or a specific one such as the Gaza war). Most *wishes* are personal, with the next frequent ones related to the health or peace of mind of oneself or one’s relatives. Interestingly, almost none of the responses mention relational considerations such as love, friendships, loneliness, intimate life, or the desire to have children (except for Saudi Arabia for the latter). Further research is needed to test whether the predominance of materialistic considerations stems from the context (an impersonal survey) or truly reflects people’s primary thoughts.

Asked about the greatest *injustice*, the most frequent answers relate to “inequality” or “poverty”, with 19% of occurrences (28% in Europe but only 9% in the U.S.). It is unclear

⁶The list of keywords is given in Appendix TODO.

⁷The keyword matching searches the regular expression “global poverty—global inequality—hunger—drinking water—starv”, ignoring case. The automatic and manual classification is based on the class definition “Inequality at the international level / Hunger or poverty in poor countries”.

⁸Interestingly, out of the 45 (one-word) answers “poverty”, ChatGPT-4.1 coded only 42 of them as *global inequality*, showing the lack of consistency of this classifier.

Figure 3: Most common concepts in open-ended fields. (Questions 19-21)

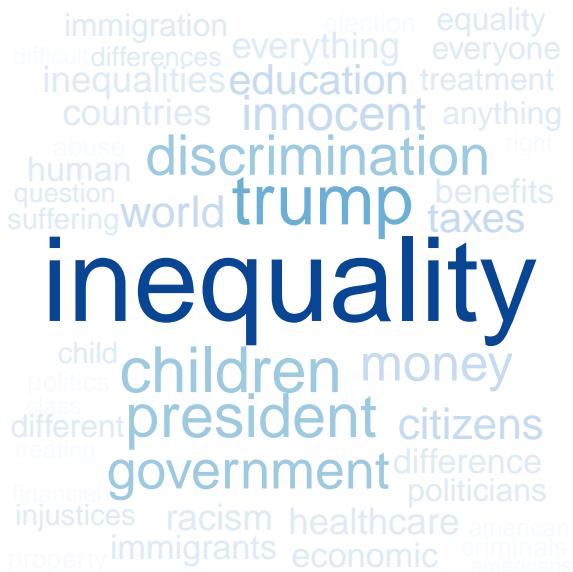

(a) "What are your main concerns these days?"

(b) "What are your needs or wishes?"

(c) "What according to you is the greatest injustice of all?" (d) "Can you name an issue that is important to you but is neglected in the public debate?"

- (d) "Can you name an issue that is important to you but is neglected in the public debate?"

whether these respondents think about inequality in their own country or at the global level, as only 13% of them mention a geographical scope. A hint is that, among them, 2% mention their own country *versus* 11% the global level (or Global South issues such

as “clean water” or “starvation”), with Italians and Poles the most prone to mention the global level and Japanese the least. The next most common answers relate to “discrimination” (based on gender, race, or sexual orientation), “violence” or “wrongful convictions” (many respondents denounce unjustly sentenced innocents), or their country’s “welfare State” (with people either criticizing the lack of public services or excessive welfare for underserving people).

Asking people for “an issue important to them but neglected in the public debate” fails to uncover unusual topics. 20% of respondents are not able to find such an issue. Although “immigration” is the most frequent word according to the wordcloud, only 5% of respondents refer to this issue, which comes after “public services”, the “cost of living”, or the “environment”. That most topics mentioned are already highly publicized suggests that the public debate either reflects or shapes what people have in mind.

Reading and coding each field one by one took about 30 hours, but it was worth it: not only does it result in an arguably more accurate classification; it also helped me grasp people’s ways of thinking first hand. For example, most people reason from their own perspective (e.g. “my pension is too low”, “I want to buy a house”) and do not refer to the broader picture or to political reforms. To get a sense of people’s own words, a random display of responses can be found on bit.ly/fields2025.

Interestingly, the topics vary significantly across countries. Here are my impressions of each country’s slant. Compared to other countries, the concepts overrepresented in France are: insecurity, holidays or free time, the public deficit, equality, or gender equality; in Germany: old age poverty, immigration, the return of growth or the economic situation, free time, war (in Europe), and bureaucracy; in Italy: health, serenity or peace of mind, war, work stress and free time, world hunger, and feminicides; in Poland: war, inequality, holidays, honesty, and disabled people; in Spain: “health, money and love”, housing, corruption, water access, global poverty, and squatters; in the UK: the cost of living, immigration, having a comfortable life, mental health, the holocaust, roads dangerous for driving, being unjustly imprisoned, and cut in winter fuel allowance; in Switzerland: equality, immigration, and gender equality; in Japan: the level of pensions, a cut on the consumption tax, the price of rice, the declining birth rate, childcare support, reducing the number of parliament members, foreigners’ preferential treatment, excessive social assistance or the lack of reward for hard work, and stock prices; in Saudi Arabia: hobbies such as sports or soccer, the willingness to become millionaire (or billionaire), one’s business project, buying a house, their car, that they are satisfied with their income,

“self-injustice” or sin, raising children, Palestine, orphans’ oppression, and travels; in the U.S.: the economy, Donald Trump, breaches to the Constitution, abortion, and gun control.

Our topic of interest, *global inequality*, does not emerge as an issue salient to most people. Indeed, most considerations relate to issues that directly affect oneself or one’s family, and political considerations (regarding e.g. public services, pensions or taxes) are often framed at the national level. *Global redistribution* almost never appears as a *wish*. Furthermore, *global inequality* is rarely mentioned as a neglected *issue* or as a *concern*, contrary to international issues such as war, climate change, or the rise of the far right. However, it is mentioned as frequently as these other international issues in terms of *injustice*. To sum up, the low salience of global solidarity may explain why this topic fails to mobilize political forces despite it being referred to as a just cause and it being accepted by majorities (as shown below).

3.2 Prioritization of public spending items

[Fabre et al. \(2025\)](#) finds that 58% of US-Americans and 71% of Western Europeans would support a global tax on millionaires funding low-income countries (LICs), with only 26% and 14% opposing it; that around half of them would prefer to allocate half (rather than none) of the revenue from a global wealth tax to LICs; and that, on average, respondents prefer to allocate 33.4% of such revenue to LICs (*versus* domestic healthcare and education). In other words, while most people would prefer a globally redistributive tax to the status quo, the more leeway they are granted to allocate the revenue from such a tax, the less they would allocate to LICs. The greatest leeway tested by [Fabre et al. \(2025\)](#) let the respondents select their preferred share for LICs *versus* one alternative spending item, and the average preference was 33.4%, that is 67% of an equal split. Naturally, one expects respondents to split the revenue between all desirable spending items, so that the revenue allocated to one item depends on the number of items. Therefore, if LICs compete with not one but several national items, the share allocated to LICs is expected to diminish. If this share is less than 67% of the equal split, it would mean that ([Fabre et al. 2025](#)) overestimated the prioritization of LICs, e.g. or due to an excessive salience of LICs when only one alternative is proposed, or due to the domestic alternative –healthcare and education– not being the most desired. Conversely, if several items relate to a global issue, the total of “global spending” should increase. If global spending increases by less than the proportionate amount for the number of global items, it could mean that people

view global items as a single entity, but that some domestic issues were missing from the binary version.

To test whether results from (Fabre et al. 2025) gave an accurate picture of the prioritization of global spending as well as to uncover the prioritization of different global causes, I conduct a revenue allocation task with five spending items. In each of the two variants of this task, respondents use sliders to allocate the revenue of a fictive global tax of wealth (in excess of \$5 million, at a rate of 2%), after being informed of the revenue the tax would collect in their country (from \$1 billion in Poland to \$514 in the U.S.) *versus* in all LICs combined (\$1 billion).

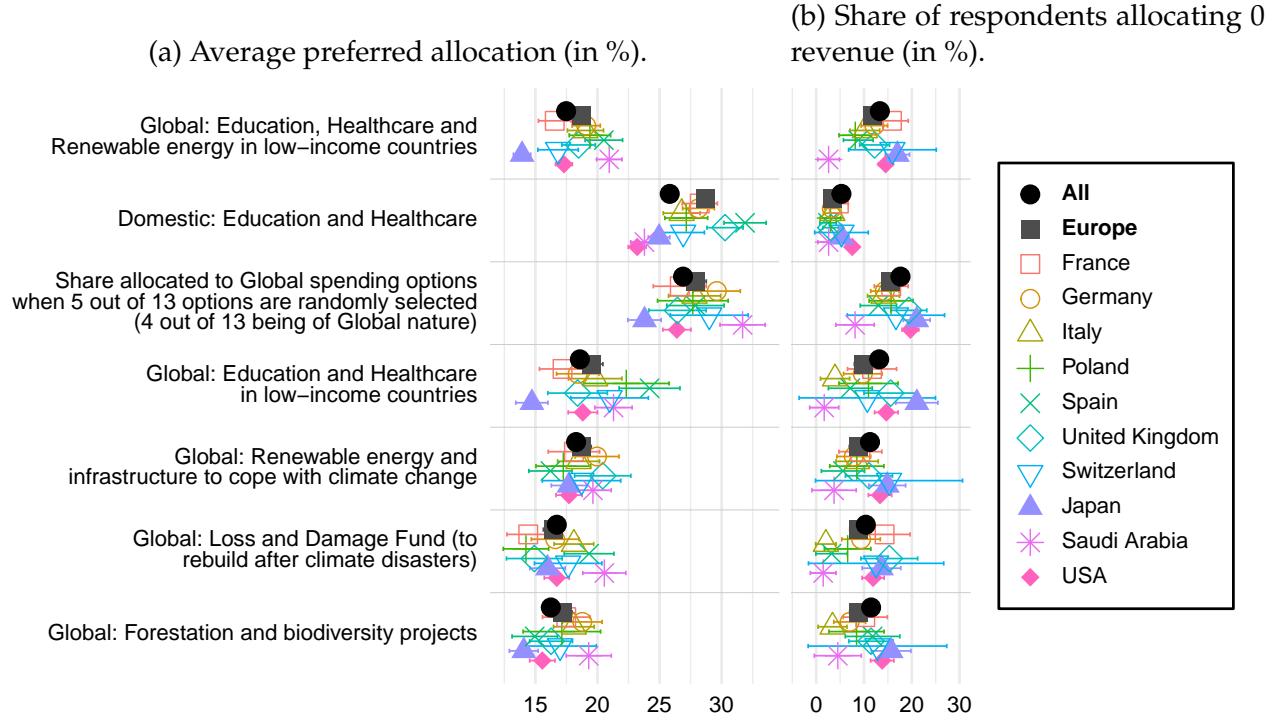

In the variant *Few*, one global item (“Education, Healthcare and Renewable energy in LICs”) competes with four domestic ones. In every country, the most prioritized item is “Domestic: Education and healthcare”, with an average preferred share of 26% (Figures S24, S25). The global item is the least prioritized overall, at 17.5% (from 14% in Japan to 21% in Saudi Arabia and Spain). However, global spending is 31% higher than the expected 13.4% (that is 66.8% of 20%)⁹ and only 13% of the respondents do not allocate any revenue to it (Figure 4).

In the variant *Many*, five items are selected at random among a pool of four global and nine domestic items. While domestic healthcare (27%) and education (23%) are the most prioritized items, global ones obtain an average ranging from 17% for “Forestation and biodiversity projects” to 19% for “Education and Healthcare in LICs” (Figures 4, S26-S27). On average, there are 1.5 global items and they are allocated 26.9% of the revenue, which again corresponds to 17.5% per global item. Interestingly, there is no significant correlation between the number of global items and the average allocation per global item.

In other words, the revenue allocation tasks validate and confirm the results from (Fabre et al. 2025). Most people would like to use a substantial share of the revenue from a global wealth tax to financing sustainable development in LICs, even though global spending is somewhat less prioritized than domestic spending.

⁹If one restricts the comparison to the countries surveyed by (Fabre et al. 2025), the global item is allocated 17.8%, that is 34% more than expected. The most credible explanation for outperforming expectations is that the domestic item chosen by (Fabre et al. 2025) was the preferred one. Indeed, the global item is allocated 68% of the “Domestic: Healthcare and Education” share, almost exactly as expected.

Figure 4: Preferred split of revenue of an international wealth tax. The first two items are from the variant *Few* with 5 fixed items (the *Global* one and the most preferred one are displayed); the last four items are from the variant *Many* with 5 items taken at random out of 13 (the 4 *Global* ones are displayed). (Questions 24-25)

4 Acceptance of international policies in function of country coverage

While acceptance of global climate or redistributive policies is widespread (Capelen et al. 2025; Fabre et al. 2025), acceptance may drop if policies are not truly *global* but only *international*, i.e. if key countries such as China, Russia or the U.S. do not participate. Indeed, people may be concerned by a domestic loss of competitiveness that could result from the expatriation of taxpayers to low-tax jurisdictions; or by an unfair burden-sharing if non-cooperating countries free-ride on decarbonization or funding sustainable development. In this Section, I uncover the acceptance of globally redistributive policies depending on the coalition of countries that would implement them. I study in turn a carbon price and a wealth tax.

4.1 International Climate Scheme

Presentation of the schemes. “Cap and dividend” is a reference climate policy, whereby fossil fuel companies at the source of emissions must buy emission permits on a carbon market, with the revenue from carbon pricing rebated equally to individuals. The limited and declining number of emission permits guarantees that emissions are capped according to the climate objective. As polluting companies pass the cost of emission permits down the value chain, the carbon price is ultimately paid by consumers, in proportion to their carbon footprint. Meanwhile, the equal cash transfer (or “dividend”) offsets price increases for the average consumer. Those with a carbon footprint higher than average financially lose and those with a lower carbon footprint (who are on average poorer) financially gain.

Using simple Yes/No questions, I test the acceptance of three types of “cap and dividend” (or “Climate Scheme”) policies, that differ by the geographical scope: the National, Global, and International Climate Schemes (Figures 6, S29). While average consumers in a high-income country are financially unaffected by the National Climate Scheme (NCS), they lose out in the Global and International versions, since their carbon footprint is larger than the world (or climate coalition) average.

The National Climate Scheme (NCS) is accepted by 66% of respondents (ranging from 56% in Poland to 88% in Saudi Arabia).

The Global Climate Scheme. Before presenting the Global Climate Scheme (GCS), respondents are prompted to be attentive with the incentive that they may win a \$100 lottery prize if they correctly answer a comprehension question at the end of the survey. When presented the Global Climate Scheme (GCS), respondents are informed that the \$20 per month cash transfer would lift out of extreme poverty 600 million people, and the cost to them is made salient. Respondents are informed of the price increases and the net cost to the average person in their country (e.g. 2% price increases and a net cost of \$90 per month in the U.S., or 2% and €45 per month in Germany).¹⁰ The GCS is accepted by 57% of respondents (from 48% in Russia to 85% in Saudi Arabia). The salience of costs in the GCS question may explain the somewhat lower support for the GCS compared to the

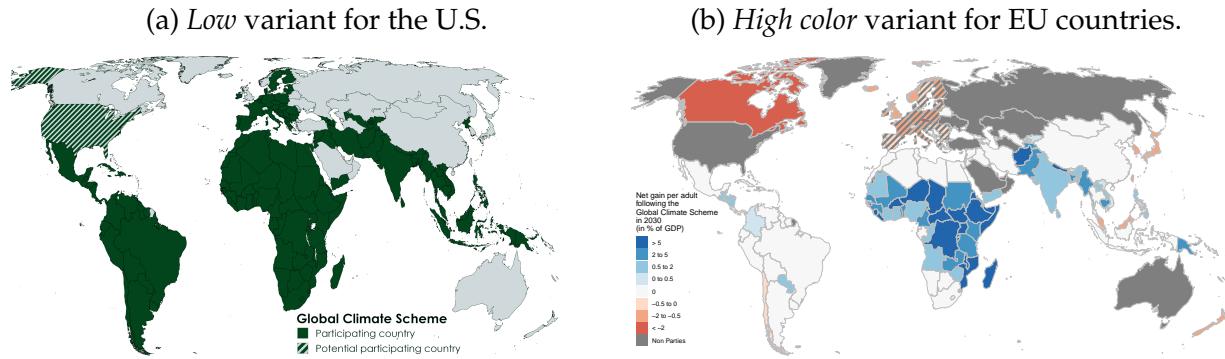

¹⁰The computations use a carbon price of \$95/tCO₂. For Russia, Saudi Arabia, and the U.S., computations assume universal country coverage. For Europe and Japan, the net loss is computed in a non-universal but *High* participation scenario, which implies a higher net loss (by about \$10 per month) since the coalition’s average carbon footprint is lower than the world average.

NCS.¹¹

Pluralistic ignorance. After the support for the GCS, respondents are asked in an incentivized way about their belief concerning the actual support, either in their country or in the U.S. (Figure S29)¹² In every country, for any variant of the question, actual support is underestimated. On average, the support in one's own country is underestimated by 14 p.p. and the support in the U.S. by 18 p.p. In Japan and in European countries, the underestimation is more severe, in the sense that most people wrongly believe that the GCS does not garner majority support in their country. Such pluralistic ignorance might explain why politicians do not dare proposing global climate justice policies.

International Climate Scheme. To test how country coverage influences the support for the International Climate Scheme (ICS), respondents are randomly assigned to one of four variants. Respondents can visualize the country coverage on a map (see examples in Figure 5), where their own country is stripped to denote its potential participation. They are also informed of the number of countries that would participate in the assigned scenario, their share of world emissions, and the list of these countries or world regions.

Figure 5: Example maps of the International Climate Scheme question. (Question 35).

The *Mid* scenario covers 56% of world emissions, with the participation of China and Global South countries. The *Low* replaces China by the EU and covers 33% of emissions. The *High scenario* adds various high-income countries to the *Mid* scenario, including the

¹¹Support for the GCS is also around 10 p.p. lower than in (Fabre et al. 2025). There may be different reasons for that: attitudes may have changed in the two years interval; I added the information on the price increases, which allows respondents to make an estimate of the cost to them (rather than to their average fellow citizen).

¹²US-Americans are asked about either their country or the EU. In Russia, I was not allowed to enquire about beliefs in a foreign country.

EU, Japan, Canada, and South Korea; covering 72% of emissions. The last variant, *High color*, combines the *High* scenario with a colored map that displays not only the country coverage, but also the net gain or cost for each country.

As expected, the wider the coverage, the higher the support. However, this effect is relatively small, as the support is only 4 p.p. higher in the *High* compared to the *Low* variant. Interestingly, among Europeans, the support significantly increases when China is added to coalition, but not significantly more when other HICs are also added. Conversely, for US-Americans and Japanese, the participation of the EU or China yield similar levels of support, and only the combined participation of China, the EU, and other HICs significantly increase the support.

The support is 6.5 p.p. lower in the *High color* compared to the *High* variant. Two reasons may explain this effect. First, with the colored map, respondents learn how their own country fares compared to other countries. Interestingly, countries that appear with darker colors on the map exhibit a larger effect.

Figure 6: Support for the National, Global, and International Climate Schemes (Yes/No question). (Questions 26-35).

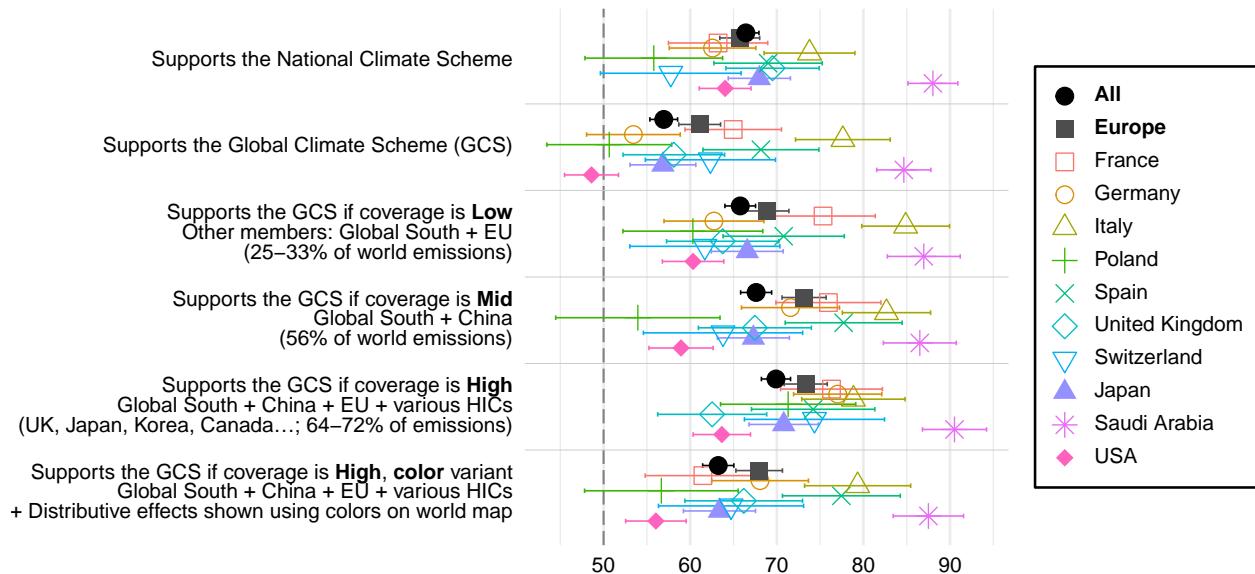

Figure 7: Support for an international wealth tax with 30% of revenue funding LICs, depending on the country coverage (Yes/No question). (Questions 41-43).

	All	Europe	France	Germany	Italy	Poland	Spain	United Kingdom	Switzerland	Japan	Saudi Arabia	USA
Minimum tax of 2% on billionaires' wealth, in voluntary countries	81	84	87	83	89	79	81	85	77	81	86	77
Bridgetown initiative: MDBs expanding sustainable investments in LICs, and at lower interest rates	79	82	81	81	88	72	81	85	75	80	87	74
L&D: Developed countries financing a fund to help vulnerable countries cope with climate Loss and damage	73	75	72	73	84	72	77	72	67	73	89	70
Expand Security Council to new permanent members (e.g. India, Brazil, African Union), restrict veto use	72	76	72	76	80	73	76	78	72	68	84	67
Raise global minimum tax on profit from 15% to 35%, allocating revenues to countries based on sales	71	75	75	74	85	66	70	74	63	72	77	66
International levy on shipping carbon emissions, returned to countries based on population	70	73	78	70	78	61	74	75	72	59	81	67
Debt relief for vulnerable countries, suspending payments until they are more able to repay	69	70	64	60	81	79	72	72	65	68	88	67
At least 0.7% of developed countries' GDP in foreign aid	68	69	66	67	79	59	77	65	64	62	86	67
NCQG: Developing countries providing \$300 bn a year in climate finance for developing countries	65	69	68	69	76	63	73	67	65	59	86	61
International levy on aviation carbon emissions, raising prices by 30%, returned to countries based on population	53	55	62	54	56	53	54	54	51	46	70	51

Figure 11: Support for broad action or radical proposals of global redistribution. (Questions 44-46, 49-51, 53, 61).

	All	Europe	France	Germany	Italy	Poland	Spain	United Kingdom	Switzerland	Japan	Saudi Arabia	USA
Supports tax on world top 1% to finance global poverty reduction (Additional 15% tax on income over [\$120k/year in PPP])	69	72	72	72	84	69	74	67	61	69	81	62
Supports tax on world top 3% to finance global poverty reduction (Additional 15% tax over [\$80k], 30% over [\$120k], 45% over [\$1M])	63	65	70	63	70	70	66	67	41	55	82	58
Prefers sustainable future	68	70	72	70	76	57	74	68	67	76	71	62
"Governments should actively cooperate to have all countries converge in terms of GDP per capita by the end of the century"	71	77	77	75	87	84	84	66	66	70	92	56
Could sign a petition and spread ideas	52	55	53	53	57	54	57	55	48	51	40	50
More likely to vote for party if part of worldwide coalition for climate action and global redistribution	68	72	71	71	82	64	77	69	57	56	NA	67
Supports reparations for colonization and slavery in the form of funding education and technology transfers	46	50	44	44	69	NA	51	46	NA	NA	NA	40
"My taxes should go towards solving global problems"	61	61	43	62	76	62	71	58	53	58	88	55
"My taxes ... global problems" (Global Nation, 2023)	56	59	43	65	76	58	60	52	NA	76	NA	44

Figure 12: “Which group of people do you advocate for when you vote?” (Question 62).

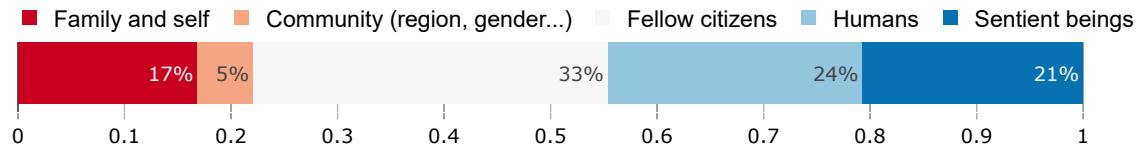

Figure 13: “How do you evaluate each of these channels to transfer resources to reduce poverty in LICs?”

Percentage of *Right* or *Best* way (other options: *Wrong* or *Acceptable* way). (Question 48).

	All	Europe	France	Germany	Italy	Poland	Spain	United Kingdom	Switzerland	Japan	Saudi Arabia	USA
Targeted cash transfers (child allowances, disability & elderly pensions)	46	48	43	46	57	45	54	44	47	36	73	45
Development aid agencies	40	42	42	47	39	32	44	43	44	36	57	37
Government, conditional on financing poverty reduction	37	40	39	43	48	33	41	37	35	27	62	35
Local NGOs with democratic processes	31	33	39	33	34	33	33	29	32	22	53	29
Unconditional cash transfers to each household	30	30	31	27	31	30	34	27	32	24	62	31
Local authorities	22	23	25	22	22	30	23	19	19	18	47	22
Government, unconditional	18	18	21	14	18	22	21	16	14	14	50	18

Figure 14: Average custom global redistribution. (Question 55).

Examples of income changes after your proposed redistribution:

Now	After
0 \$/year	2 215 \$/year
10 000 \$/year	10 115 \$/year
60 000 \$/year	55 793 \$/year
100 000 \$/year	90 965 \$/year
Your <i>individual</i> income	
40 000 \$/year	38 206 \$/year

Proportion of winners: 60%

Proportion of losers: 20%

Degree of redistribution: 2

jChartFX

I am satisfied with my custom redistribution.

I want to skip this question.

Figure S8: Effect by vote at the last election on the likelihood that a political program is preferred of containing the following policy (compared to no foreign policy in the program). (See Figure S62 for the simple figure). (Question 23)

(a) Cut development aid.

(b) Int'l tax on millionaires with 30% financing health and education in low-income countries.

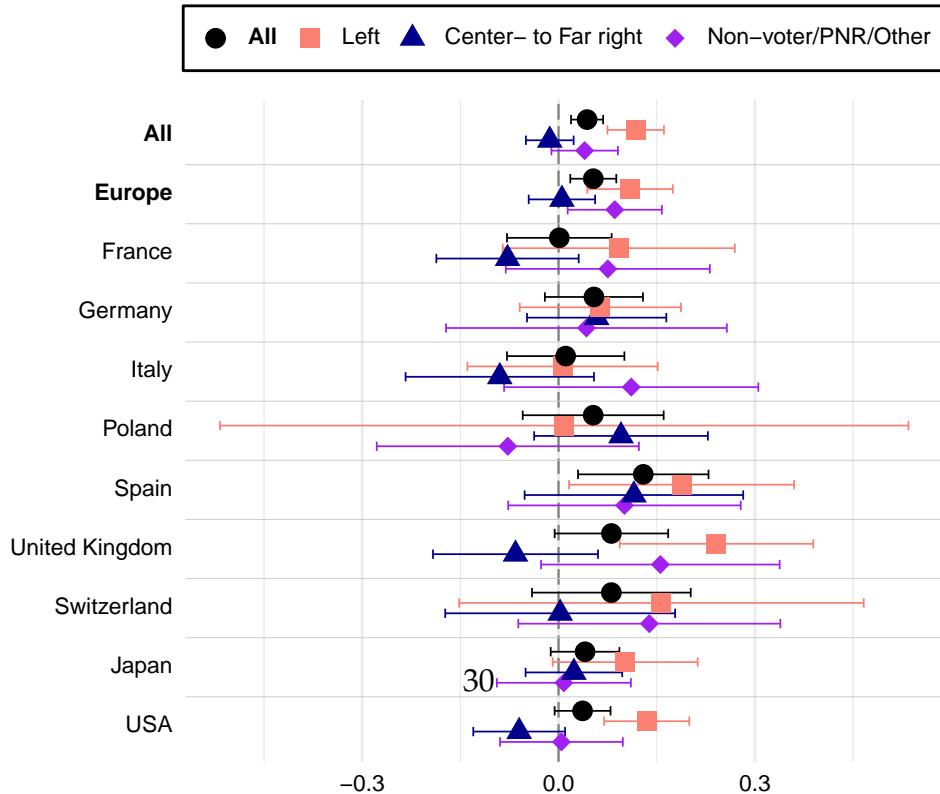

Figure S9: Conjoint analysis in France (Average Marginal Component Effect). Cf. Figure S18 for French. (Question 23).

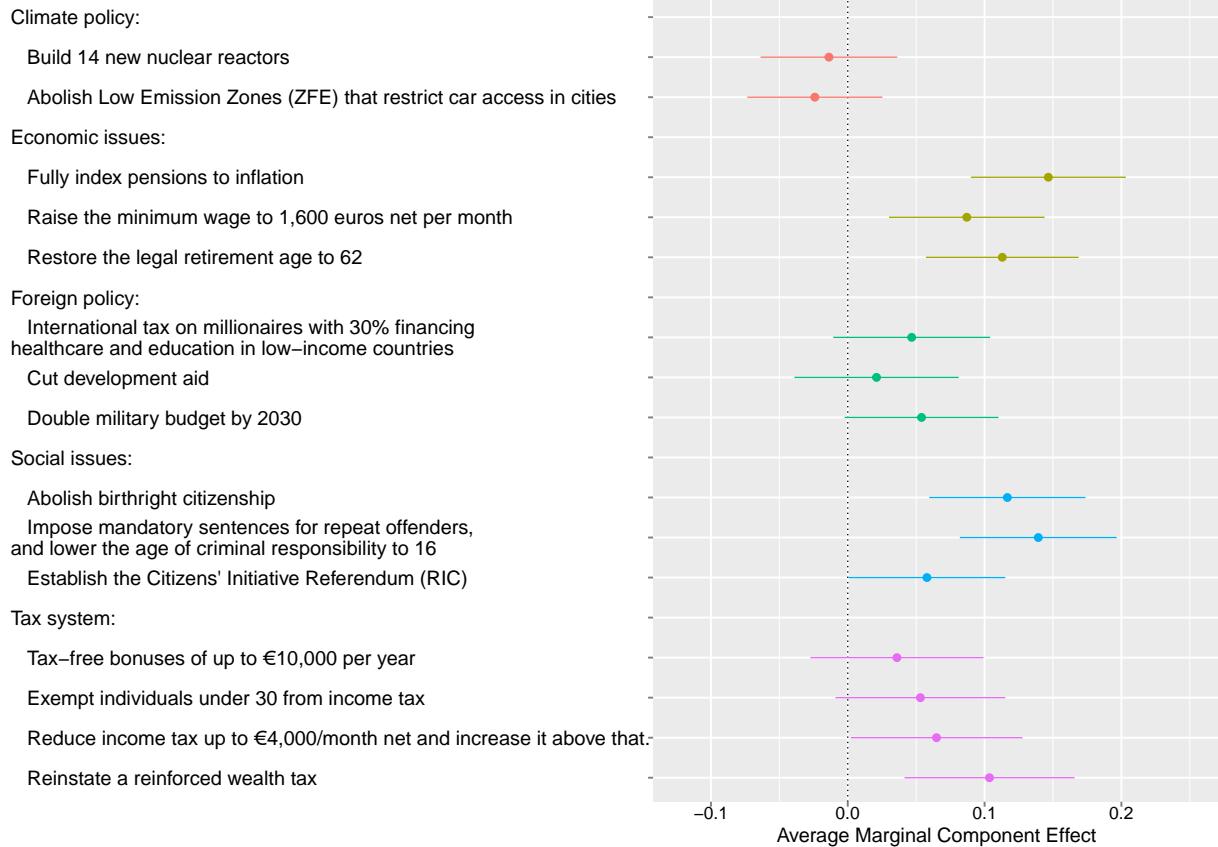

Figure S10: Conjoint analysis in Germany (Average Marginal Component Effect). Cf. Figure S19 for German. (Question 23).

Climate policy:

- Repeal the heating law that requires renewable energy
- Ban new combustion-engine cars from 2035

Economic issues:

- Lower electricity prices by 12% through tax reductions
- Raise the minimum wage to €15 by 2026
- Invest €500 billion in strategic industries like steel, automotive, and defense

Foreign policy:

- International tax on millionaires with 30% financing healthcare and education in low-income countries
- Cut development aid
- Support Ukraine militarily and financially

Social issues:

- Use electronic ankle monitors to track violent offenders against women
- Offer a birth grant of €20,000 for newborns
- Restrict the fast-track path to German citizenship

Tax system:

- Exempt from taxes overtime work and work of retired people
- Abolish the inheritance tax
- Fully reinstate the debt brake
- Higher taxes for the richest 1% to finance higher child benefit, citizen's income and minimum pension

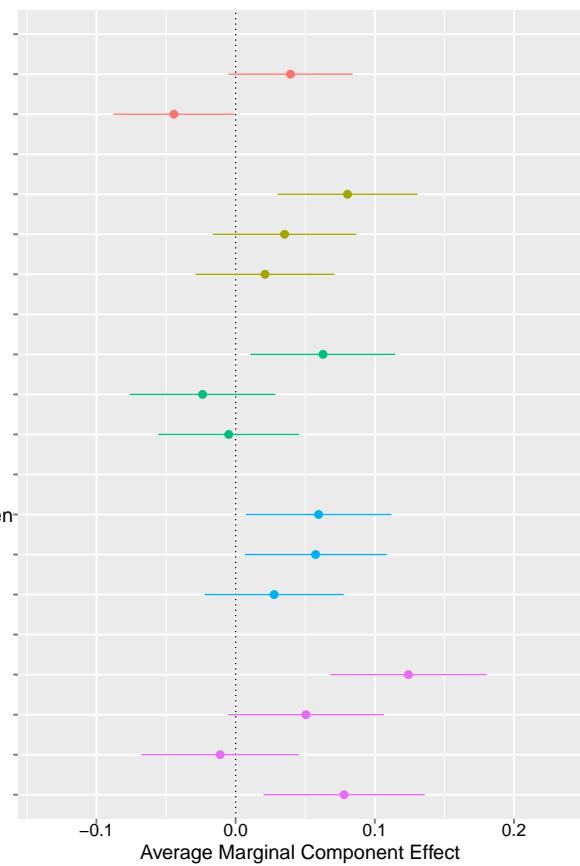

Figure S11: Conjoint analysis in Italy (Average Marginal Component Effect). Cf. Figure S20 for Italian. (Question 23).

- Climate policy:
- Cancel the ban on new combustion–engine cars from 2035
 - Double the capacity of renewable energy by 2030
- Economic issues:
- Increase the birth grant to up to €3,600 for newborns
 - Use unspent EU funds to exempt hiring companies from taxes
 - Introduce a legal minimum wage at 10€ per hour
 - Reduce working hours without reducing salaries
- Foreign policy:
- International tax on millionaires with 30% financing healthcare and education in low–income countries
 - Cut development aid
 - Develop a common EU defense
- Social issues:
- Legal limit on migration and process asylum requests outside the EU
 - Recognize same–sex marriage
 - Introduce free and mandatory early education (until 3 years old)
- Tax system:
- Reduce the income tax on low–income households
 - Replace the income tax by a 15% flat tax

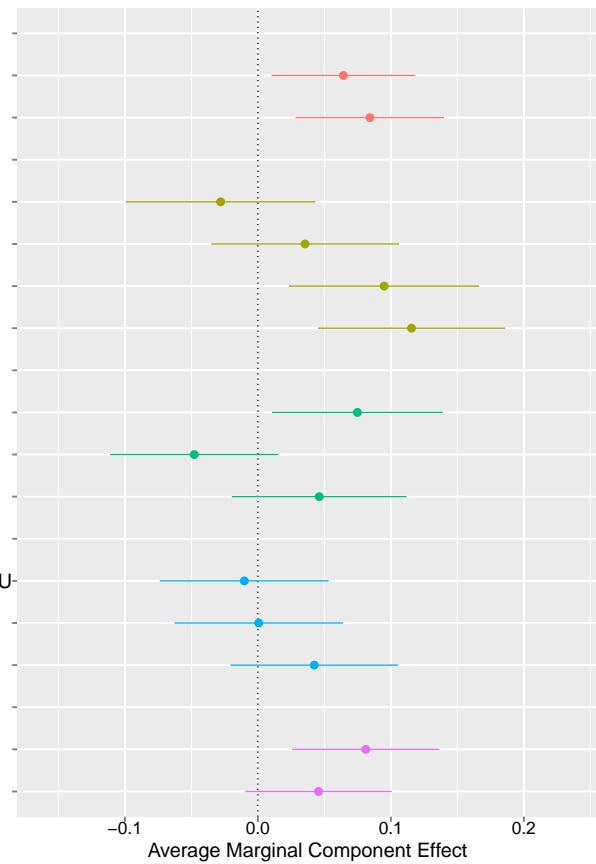

Figure S12: Conjoint analysis in Poland (Average Marginal Component Effect). Cf. Figure S21 for Polish. (Question 23).

Climate policy:

- Phase out coal by 2035
- Ban the sale of new combustion-engine cars by 2035

Economic issues:

- Expansion of rail production and infrastructure investment
- Allocate 5% of GDP to military expenditures by 2030

Foreign policy:

- International tax on millionaires with 30% financing healthcare and education in low-income countries
- Cut development aid
- Detention of rejected asylum seekers until they can be deported

Social issues:

- Restoring abortion rights
- Relax restrictions on public assembly and protest
- Extended parental leave, tax benefits for children, and remote work option

Tax system:

- Reduce taxes on low-income households by increasing the tax-free income allowance
- Taxes on the profits of large digital corporations and fossil fuel companies
- Income tax exemption for seniors delaying retirement

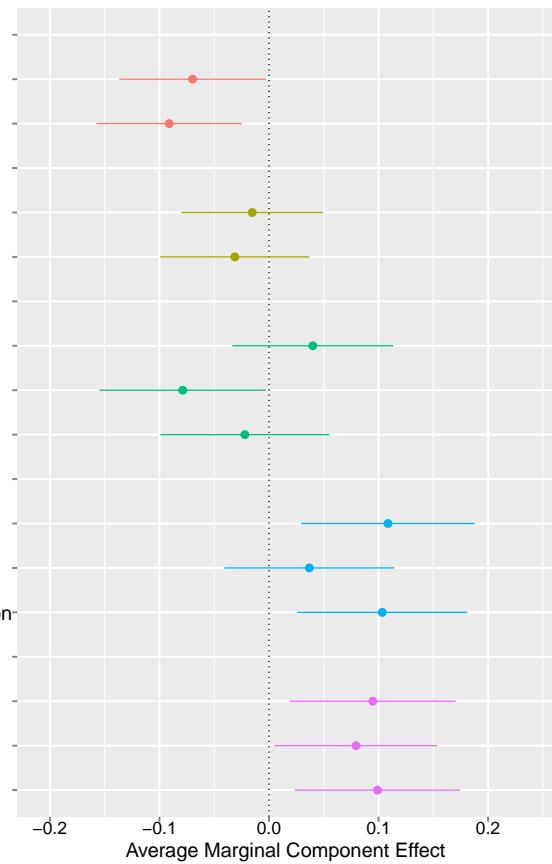

Figure S13: Conjoint analysis in Spain (Average Marginal Component Effect). Cf. Figure S22 for Spanish. (Question 23).

Climate policy:

Extend the social electricity voucher

A national investment plan to enhance water management

Economic issues:

Set the minimum wage at 1350€/month

Reduce the workweek to 36 hours by 2030 without salary cut

Promote flexible working hours through a time bank

Foreign policies:

International tax on millionaires with 30% financing healthcare and education in low-income countries

Cut development aid

Increase support for Ukraine and maintain sanctions on Russia

Social issues:

Strengthen social media regulation for transparency, misinformation control, and verified identity

Free early education (from 0 to 3 years)

Create centers outside the EU to process asylum requests

Tax system:

Lower the income tax on the middle class and increase it on rich households

Abolish the wealth tax and lower corporate tax rates

Reduce taxation in rural areas through the Agricultural Taxation Act

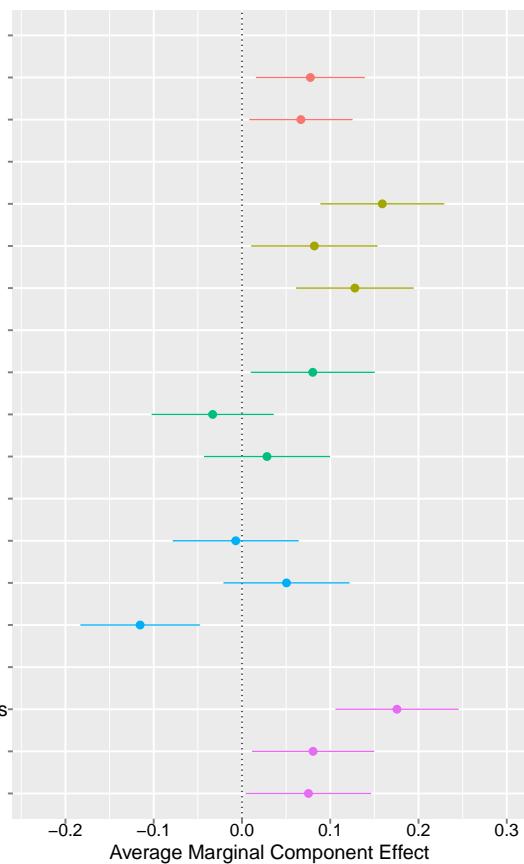

Figure S14: Conjoint analysis in the UK (Average Marginal Component Effect). (Question 23).

Climate policy:

Investment in renewables and nuclear to achieve zero-emissions electricity in 2030

A ban on domestic flights for trips under three hours by train

Economic issues:

30 hours of free childcare per week for working parents

Healthcare plan: more appointments by utilising overtime employment, recruitment in mental care and dentistry coverage

Raising the minimum wage to £15 per hour

A 4-day working week

Foreign policy:

International tax on millionaires with 30% financing healthcare and education in low-income countries

Cut development aid

Deepen Brexit by removing or reforming EU-inherited laws

Social issues:

Legal limit on migration and deportation to Rwanda

Enforce neighbourhood policing through recruitment and new equipment

Increase the Universal Credit for low-income households

Tax system:

Fight tax avoidance by abolishing the non-domiciled tax status

Abolish the inheritance tax for estates under £2 million

Abolish business rates

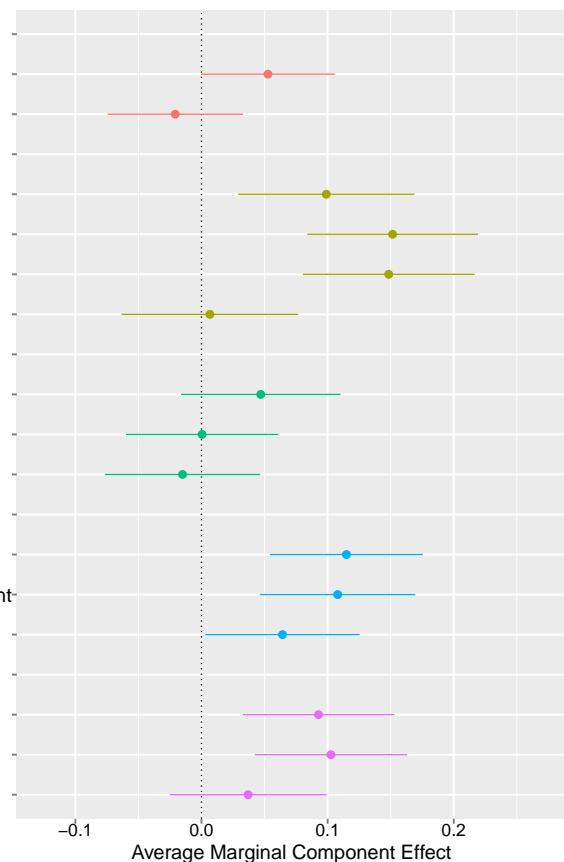

Figure S15: Conjoint analysis in Switzerland (Average Marginal Component Effect). (Question 23).

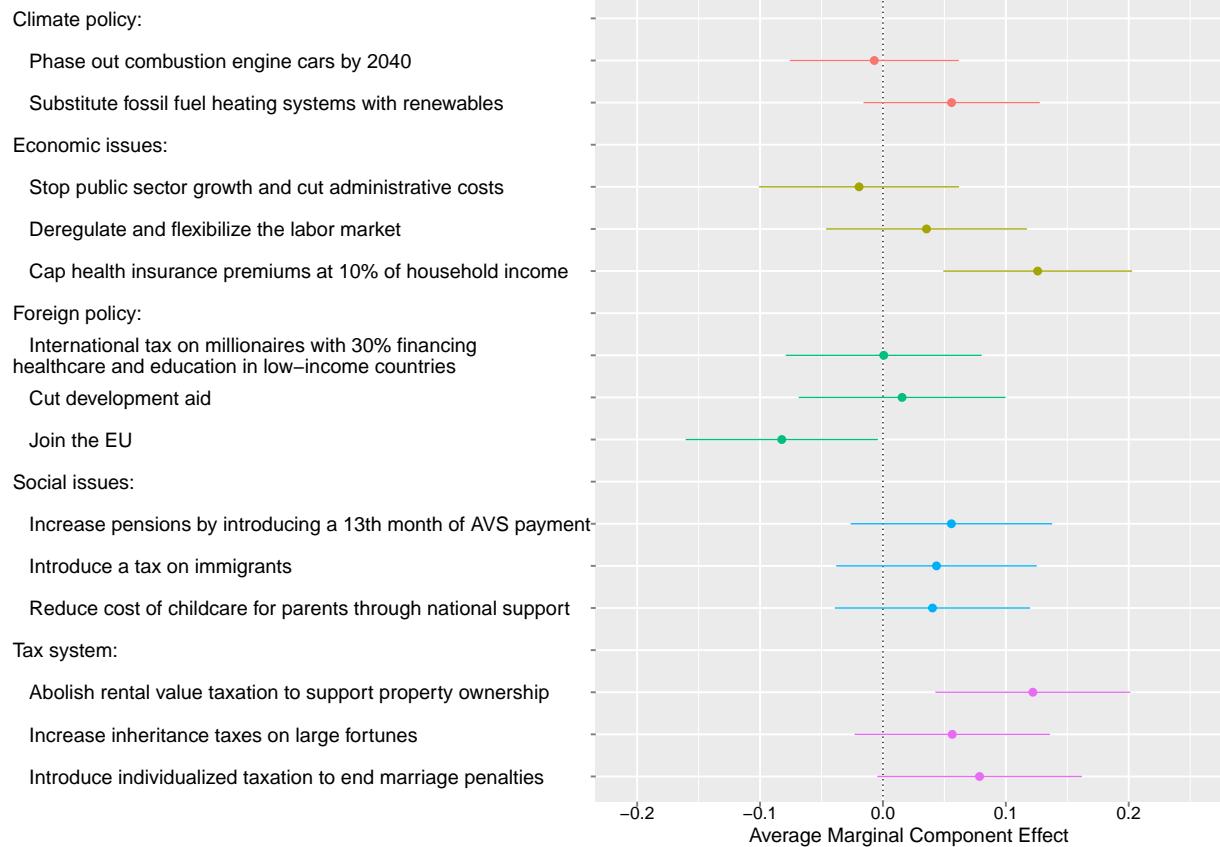

Figure S16: Conjoint analysis in Japan (Average Marginal Component Effect). (Question 23).

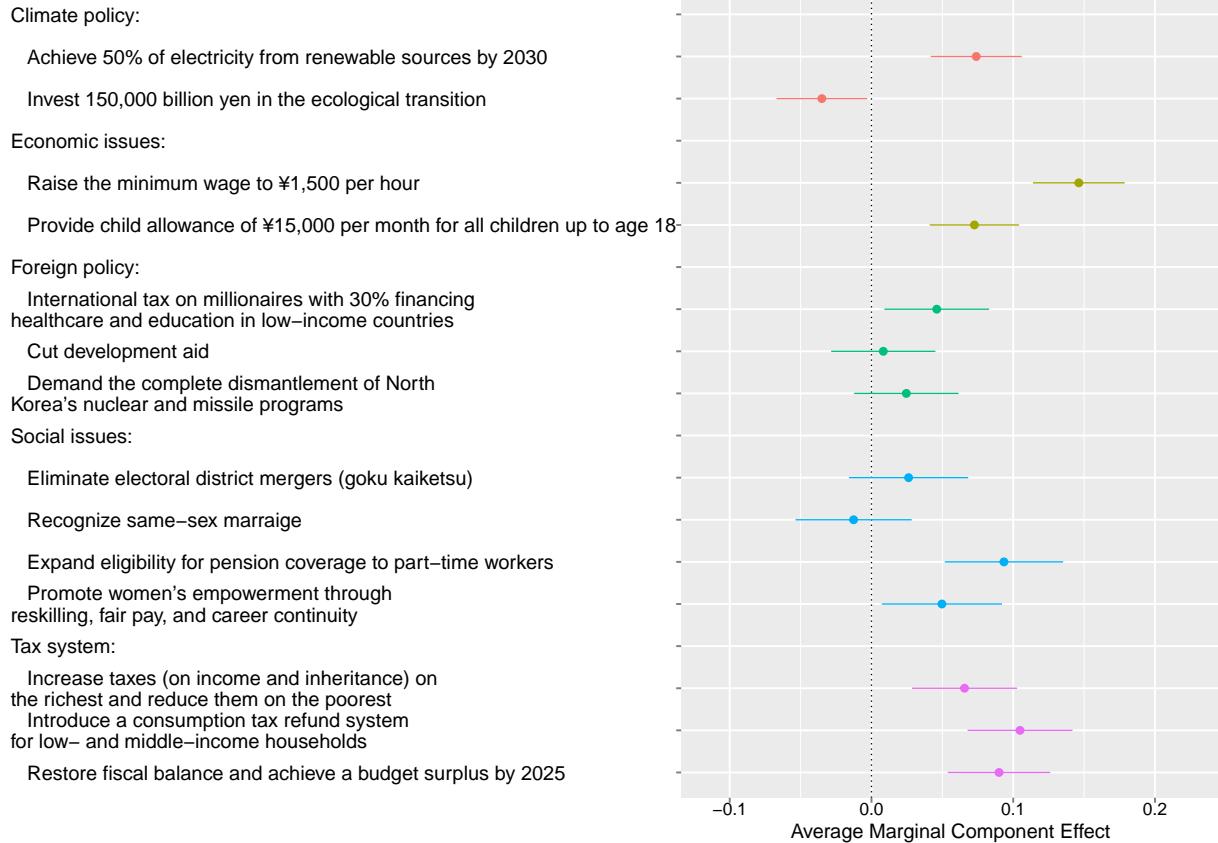

Figure S17: Conjoint analysis in the U.S. (Average Marginal Component Effect). (Question 23).

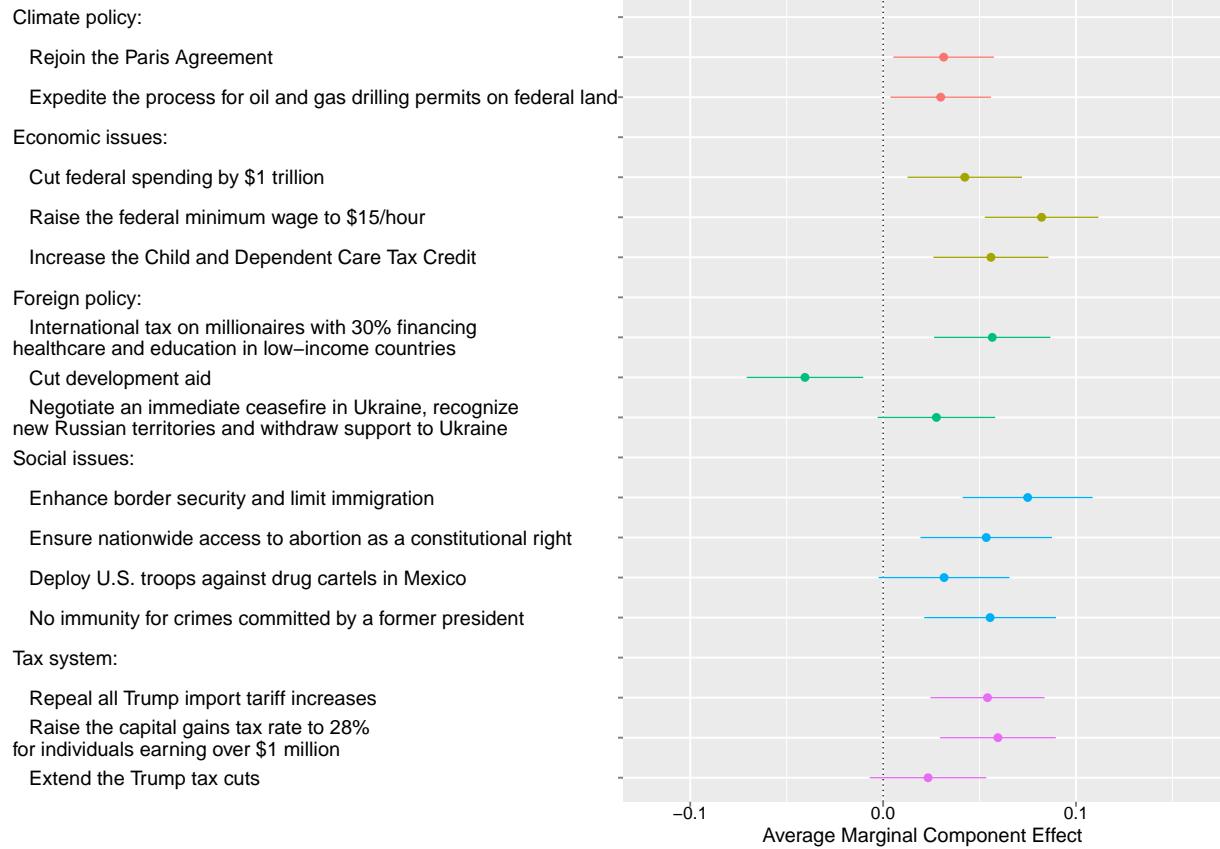

Figure S18: Conjoint analysis in France (in French, cf. Figure S9 for English). (Question 23).

Climat:

- Construire 14 nouveaux réacteurs nucléaires
- Supprimer les Zones à Faibles Émissions (ZFE)

Économie:

- Indexer totalement les retraites sur l'inflation
- Augmenter le SMIC à 1600€ net par mois
- Restaurer l'âge légal de départ à la retraite à 62 ans

Politique étrangère:

- Taxe mondiale sur les millionnaires, dont 30 % financerait la santé et l'éducation dans les pays à bas revenus
- Réduire l'aide au développement
- Doubler le budget militaire d'ici 2030

Société:

- Supprimer le droit du sol
- Peines planchers pour les récidivistes et responsabilité pénale à 16 ans
- Instaurer le Référendum d'Initiative Citoyenne (RIC)

Fiscalité:

- Défiscaliser les primes jusqu'à 10 000 € par an
- Exonérer d'impôt sur le revenu les jeunes de moins de 30 ans
- Baisser l'impôt sur le revenu jusqu'à 4000€/mois net et l'augmenter au-delà
- Rétablissement un impôt sur la fortune (ISF) renforcé

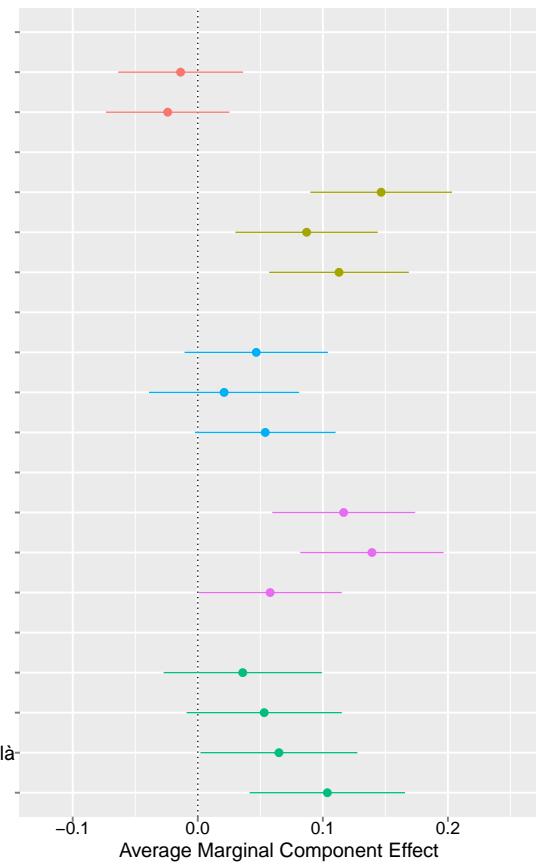

Figure S19: Conjoint analysis in Germany (in German, cf. Figure S10 for English). (Question 23).

Klimaschutz:

- Aufhebung des Heizungsgesetzes, das erneuerbare Energien vorschreibt
- Neuwagen mit Verbrennungsmotor ab 2035 verbieten.

Wirtschaftspolitik:

- Strompreise durch Steuersenkungen um 12 % senken
- Mindestlohn bis 2026 auf 15 € erhöhen
- 500 Milliarden Euro in strategische Sektoren wie Stahl, Automobilindustrie und Verteidigung investieren

Außenpolitik:

- Internationale Millionärssteuer mit 30 % zur Finanzierung von Gesundheit und Bildung in Ländern mit niedrigem Einkommen
- Kürzung der Entwicklungshilfe
- Die Ukraine militärisch und finanziell unterstützen

Gesellschaft:

- Einsatz elektronischer Fußfesseln zur Verfolgung von Gewalttätern gegen Frauen
- 20.000 € staatlicher Zuschuss bei Geburt eines Kindes
- Beschleunigte Verfahren zur Erlangung der deutschen Staatsangehörigkeit einschränken

Steuerpolitik:

- Keine Steuern auf Überstunden und Arbeit im Rentenalter
- Abschaffung der Erbschaftssteuer
- Komplette Wiedereinführung der Schuldenbremse
- Höhere Steuern für die reichsten 1% zur Finanzierung von höherem Kindergeld, Bürgergeld und Mindestrente

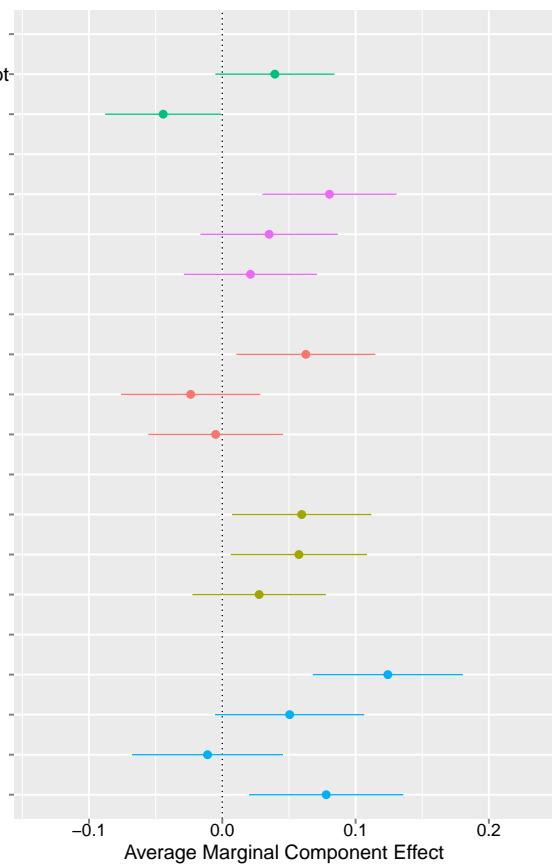

Figure S20: Conjoint analysis in Italy (in Italian, cf. Figure S11 for English). (Question 23).

Politica climatica:

Annnullare il divieto di nuove auto con motore a combustione a partire dal 2035

Raddoppiare la capacità di energia rinnovabile entro il 2030

Politica economica:

Incrementare l'assegno di nascita fino a 3.600 euro per i neonati

Destinare i fondi UE non utilizzati all'esenzione fiscale per le aziende che assumono

Introdurre un salario minimo a norma di legge di 10€ all'ora

Riduzione dell'orario di lavoro senza ridurre gli stipendi

Politica estera:

Tassa internazionale sui milionari, il cui 30% finanzierebbe l'assistenza sanitaria e l'istruzione nei Paesi a basso reddito

Tagliare gli aiuti allo sviluppo

Sviluppare una difesa militare comune europea

Politica sociale:

Imporre un limite legale della migrazione in Italia e trattare le richieste di asilo al di fuori dell'UE

Riconoscere il matrimonio tra persone dello stesso sesso

Introdurre l'istruzione in età della prima infanzia gratuita e obbligatoria (fino ai 3 anni)

Politica fiscale:

Riduzione dell'imposta sul reddito per i nuclei familiari a basso reddito

Sostituire l'imposta sul reddito con una flat tax del 15%.

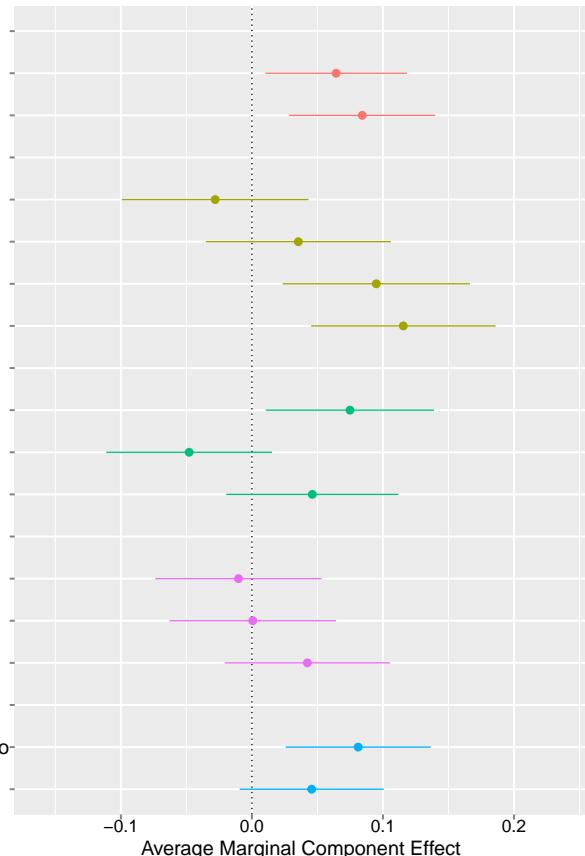

Figure S21: Conjoint analysis in Poland (in Polish, cf. Figure S12 for English). (Question 23).

Polityka klimatyczna:

Rezygnacja z węgla do 2035 r.

Zakaz sprzedaży nowych samochodów z silnikiem spalinowym do 2035 r.

Kwestie ekonomiczne:

Rozwój produkcji kolejowej i inwestycje w infrastrukturę

Przeznaczenie 5% PKB na wydatki wojskowe do 2030 r

Polityka zagraniczna:

Miedzynarodowy podatek od milionerów, z 30% finansowaniem opieki zdrowotnej i edukacji w krajach o niskich dochodach

Ograniczenie pomocy rozwojowej

Zatrzymanie osób, którym odmówiono azylu, do czasu ich deportacji

Kwestie społeczne:

Przywrócenie praw reprodukcyjnych, w tym prawa do aborcji

Zlagodzenie restrykcji w zakresie zgromadzeń publicznych i protestów

Wydluzony urlop rodzicielski, ulgi podatkowe na dzieci i możliwość pracy zdalnej

System podatkowy:

Obniżenie podatków dla gospodarstw domowych o niskich dochodach poprzez zwiększenie kwoty wolnej od podatku

Zwiększenie podatków od zysków dużych korporacji cyfrowych oraz firm zajmujących się paliwami kopalnymi

Zwolnienie z podatku dochodowego dla seniorów opóźniających przejście na emerytury

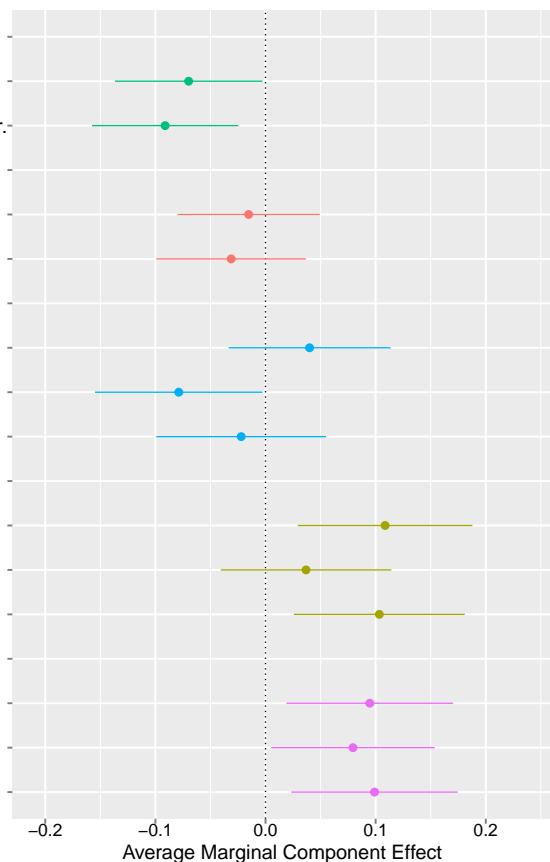

Figure S22: Conjoint analysis in Spain (in Spanish, cf. Figure S13 for English). (Question 23).

Políticas climáticas:

- Ampliar los bonos sociales térmico y eléctrico
- Un plan nacional de inversiones para mejorar la gestión del agua

Asuntos económicos:

- Fijar el salario mínimo en 1350€/mes
- Reducir la semana laboral a 36 horas antes de 2030 sin merma salarial
- Fomentar la flexibilidad horaria mediante un banco de horas

Política exterior:

- Impuesto internacional a los millonarios con un 30% para financiar la sanidad y la educación en países de renta baja
- Reducir la ayuda al desarrollo a los países de renta baja
- Aumentar el apoyo a Ucrania y mantener las sanciones a Rusia

Asuntos sociales:

- Reforzar la regulación de las redes sociales en materia de transparencia, control de la desinformación e identidad verificada
- Educación de 0 a 3 años gratuita
- Crear centros fuera de la UE para tramitar las solicitudes de asilo

Sistema fiscal:

- Bajar el impuesto sobre la renta a la clase media y aumentarlo a los hogares ricos
- Suprimir el impuesto sobre el patrimonio y bajar los tipos del impuesto de sociedades
- Reducir los impuestos en zonas rurales mediante la Ley de Fiscalidad Agraria

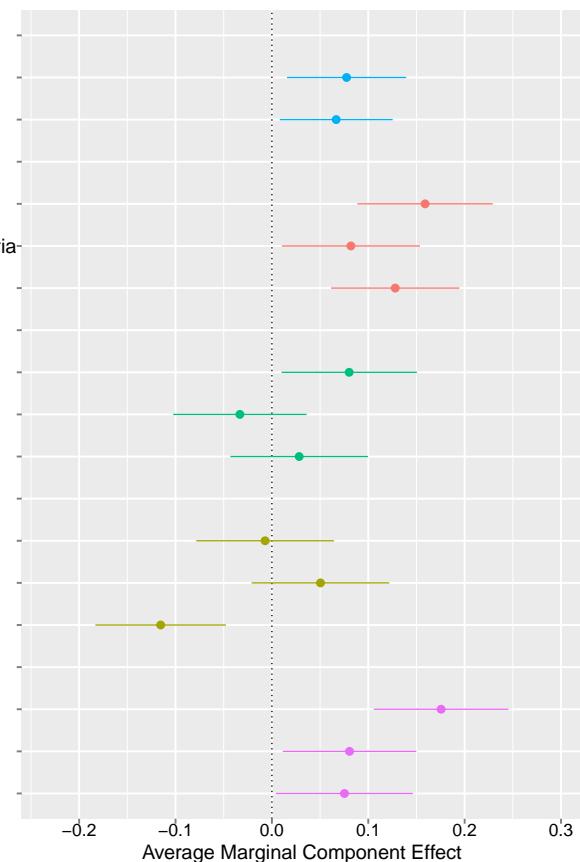

Figure S23: Conjoint analysis in Japan (in Japanese, cf. Figure S16 for English). (Question 23).

気候政策:
 2030年までに再生可能エネルギーによる電力50%を達成
 エコロジカル・トランジションに150兆円を投資

経済問題:
 最低賃金を時給1,500円に引き上げる
 18歳までの子ども全員に月額15,000円の子ども手当を支給する

外交政策:
 富裕層への国際課税を実施し、その30%を低所得国の医療・教育に充てる
 政府開発援助を削減する
 北朝鮮の核・ミサイル計画の完全な廃棄を要求する。

社会問題:
 選挙区合併の廃止
 同性婚を認める
 パートタイム労働者への年金受給資格の拡大
 リスキル、公正な賃金、キャリアの継続性を通じて女性のエンパワーメントを促進する

税制:
 最富裕層への(所得税と相続税の)増税と最貧困層への減税
 中低所得世帯への消費税還付制度の導入
 財政均衡を回復し、2025年までに財政黒字を達成する。

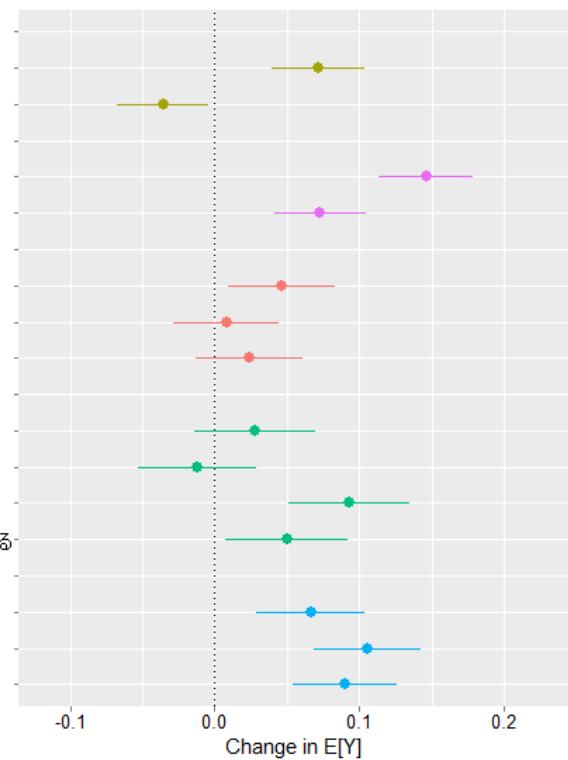

Figure S24: Average preferred revenue split for a global wealth tax (variant *few*). (Question 24).

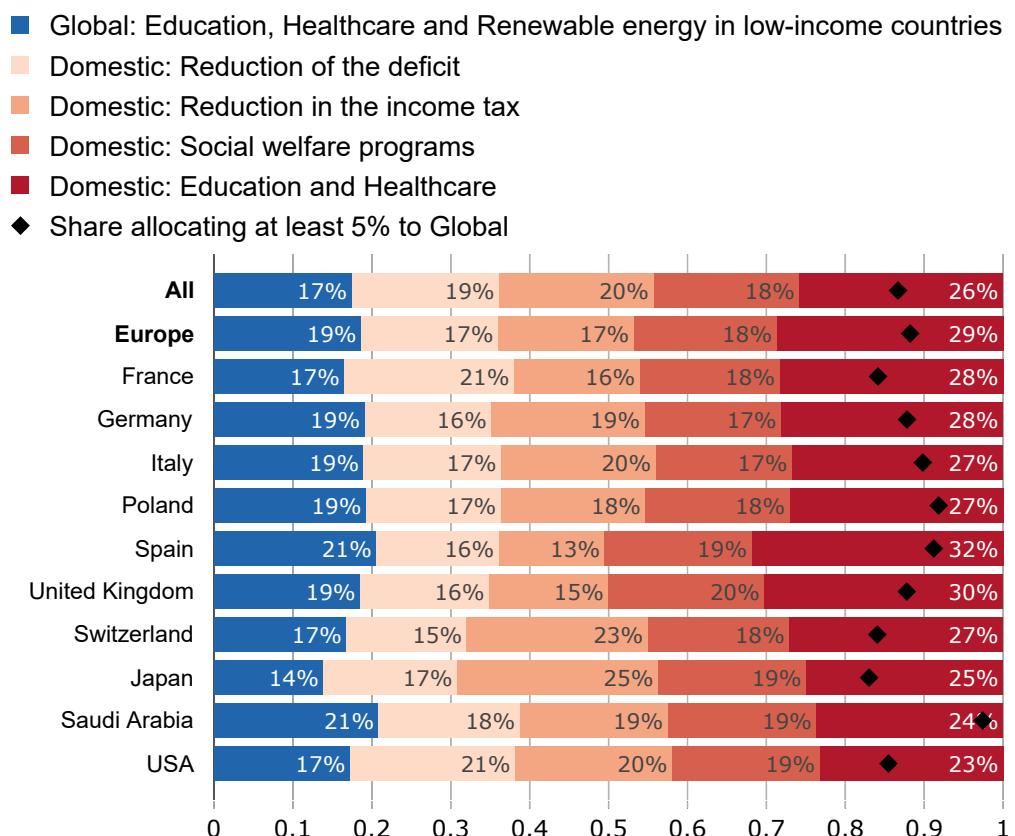

Figure S25: Decomposition of preferred shares for each spending item in the revenue split (All countries together; variant *few*). (Question 24).

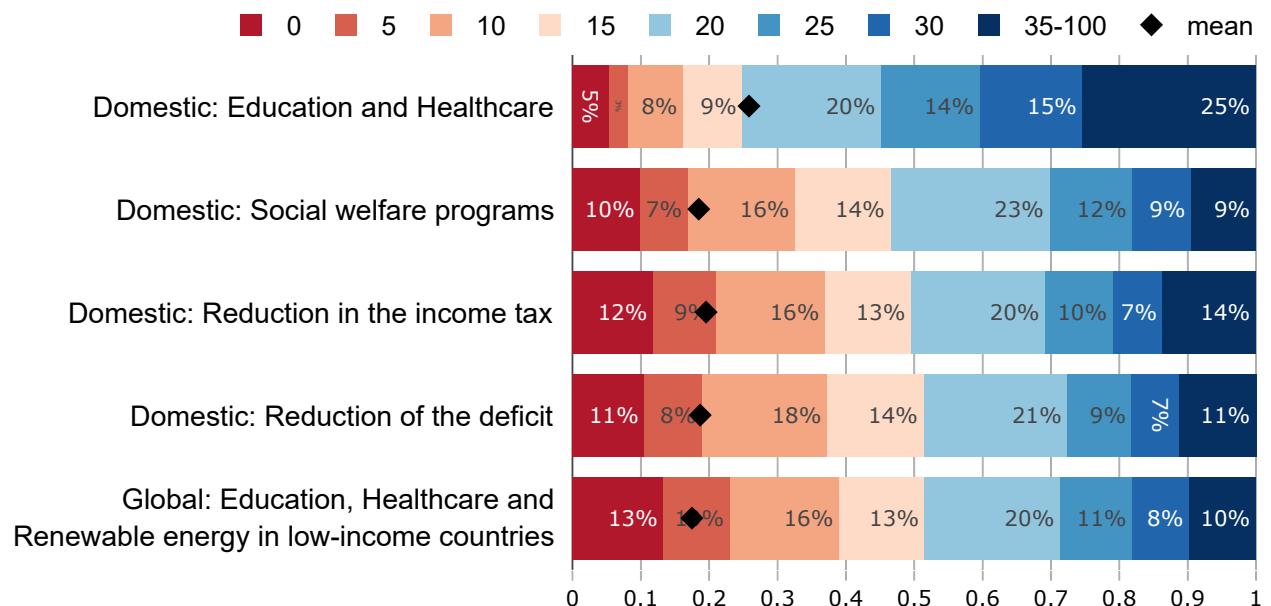

Figure S26: Decomposition of preferred shares for each spending item in the revenue split (All countries together; variant *many*). (Question 25).

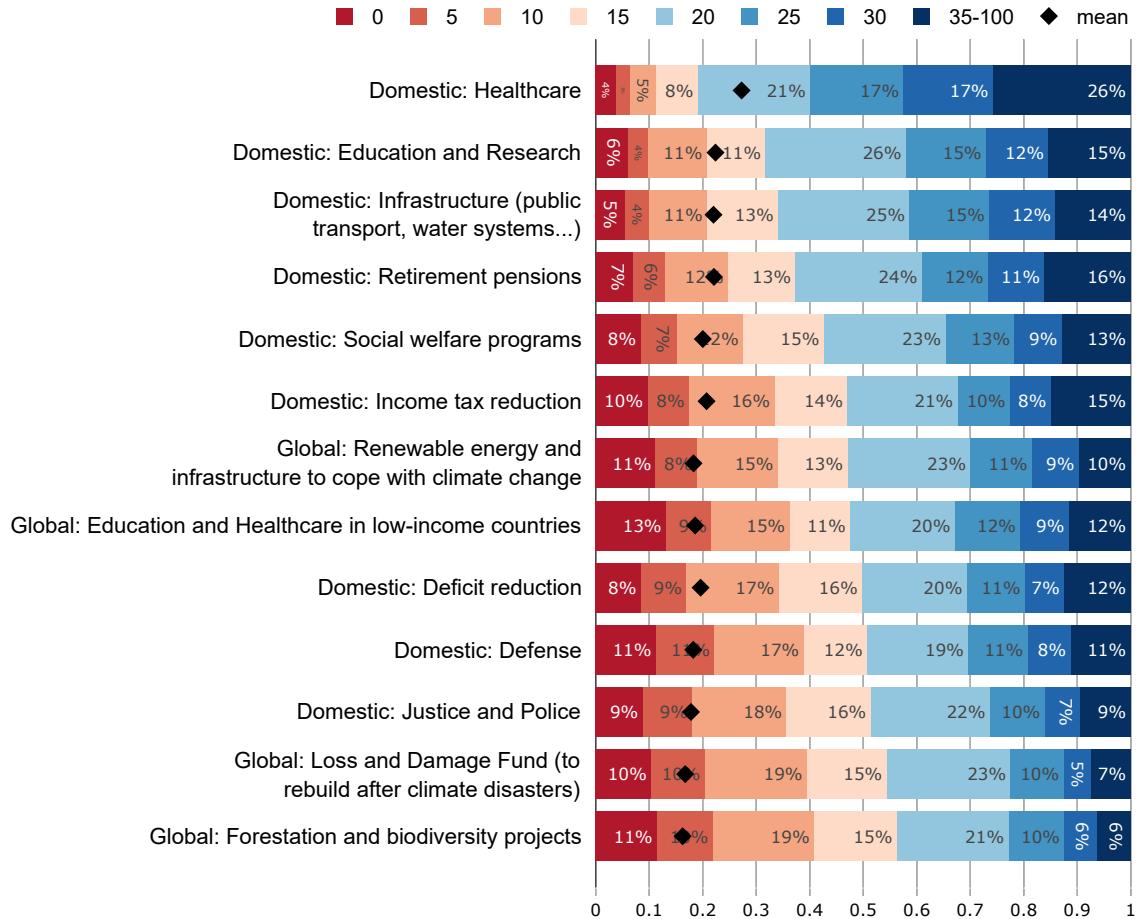

Figure S27: Average preferred revenue split for a global wealth tax (variant *many*). (Question 25).

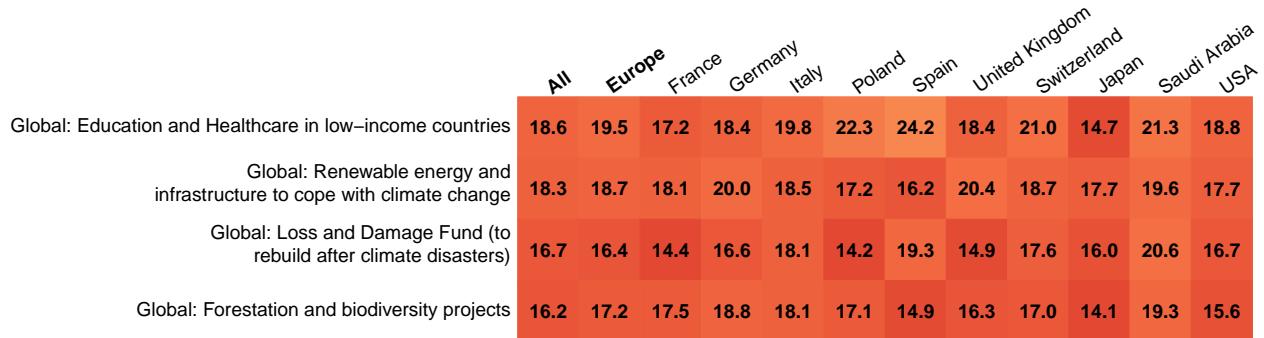

Figure S28: “By taking this survey, you will be automatically entered into a lottery to win up to [amount_lottery: \$100].

Should you be selected in the lottery, you will have the option to channel a part of this additional compensation to the charity *Just One Tree* to plant trees.

In case you win the lottery, what share of the [amount_lottery: \$100 prize] would you donate to plant trees?” (Question 27).

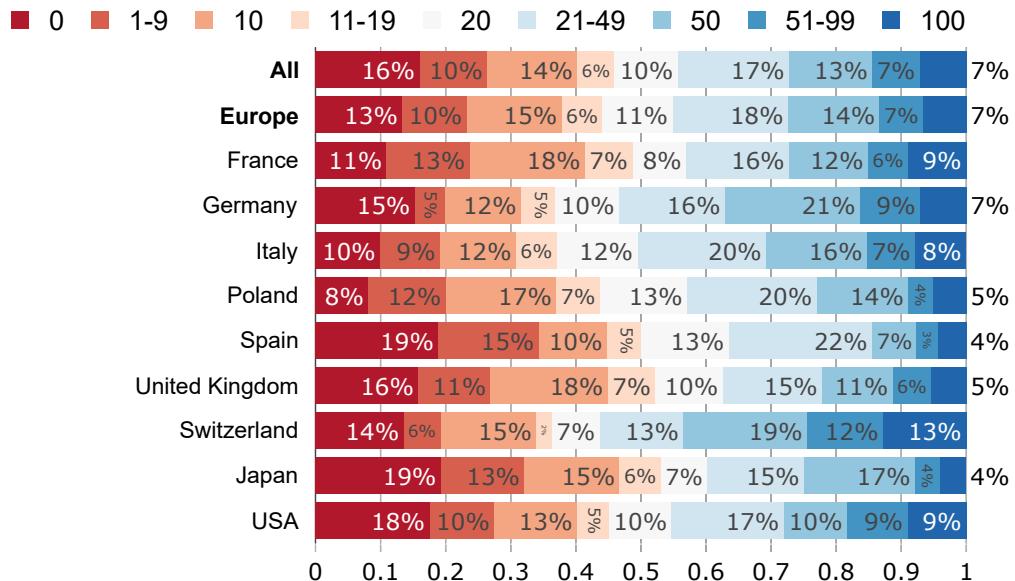

Figure S29: Support for the National, Global, and International Climate Schemes, and average belief regarding the support for the GCS. (Questions 26-35).

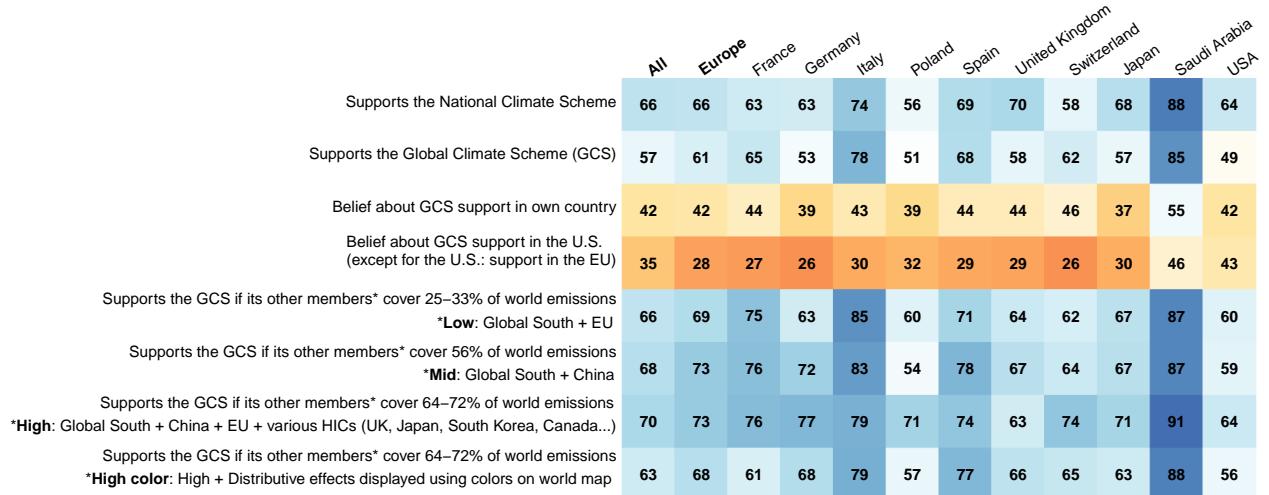

Figure S30: Absolute support for plausible global redistribution policies (Percentage of *Somewhat or Strongly support*). (Question 38).

	All	Europe	France	Germany	Italy	Poland	Spain	United Kingdom	Switzerland	Japan	Saudi Arabia	USA
Minimum tax of 2% on billionaires' wealth, in voluntary countries	64	70	75	71	73	63	66	70	64	54	67	61
Bridgetown initiative: MDBs expanding sustainable investments in LICs, and at lower interest rates	56	60	56	61	72	47	57	63	61	45	70	54
L&D: Developed countries financing a fund to help vulnerable countries cope with climate Loss and damage	54	58	55	55	68	55	61	56	52	44	75	52
Raise global minimum tax on profit from 15% to 35%, allocating revenues to countries based on sales	51	58	58	57	70	47	50	58	51	42	53	46
Debt relief for vulnerable countries, suspending payments until they are more able to repay	49	52	48	44	64	53	55	54	52	38	70	48
Expand Security Council to new permanent members (e.g. India, Brazil, African Union), restrict veto use	48	56	54	54	64	50	55	55	54	35	63	44
International levy on shipping carbon emissions, returned to countries based on population	47	54	59	49	62	45	54	53	56	30	60	46
At least 0.7% of developed countries' GDP in foreign aid	47	51	50	48	59	42	58	50	51	33	69	47
NCQG: Developing countries providing \$300 bn a year in climate finance for developing countries	47	53	51	54	62	46	54	52	53	32	67	44
International levy on aviation carbon emissions, raising prices by 30%, returned to countries based on population	38	43	47	42	45	39	42	41	42	26	53	36

Figure S31: Share of plausible global redistribution policies supported (*somewhat or strongly*). (Question 38).

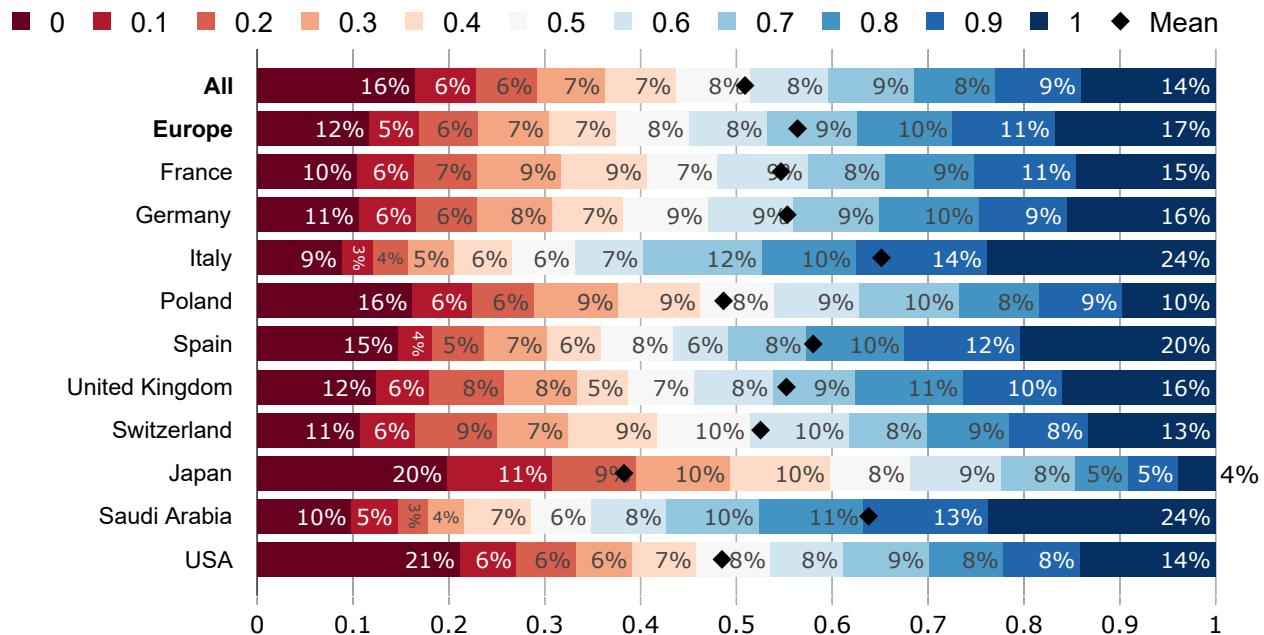

Figure S32: Share of plausible global redistribution policies opposed (*somewhat* or *strongly*). (Question 38).

Figure S42: "Should governments actively cooperate to have all countries converge in terms of GDP per capita by the end of the century?" (Question 49).

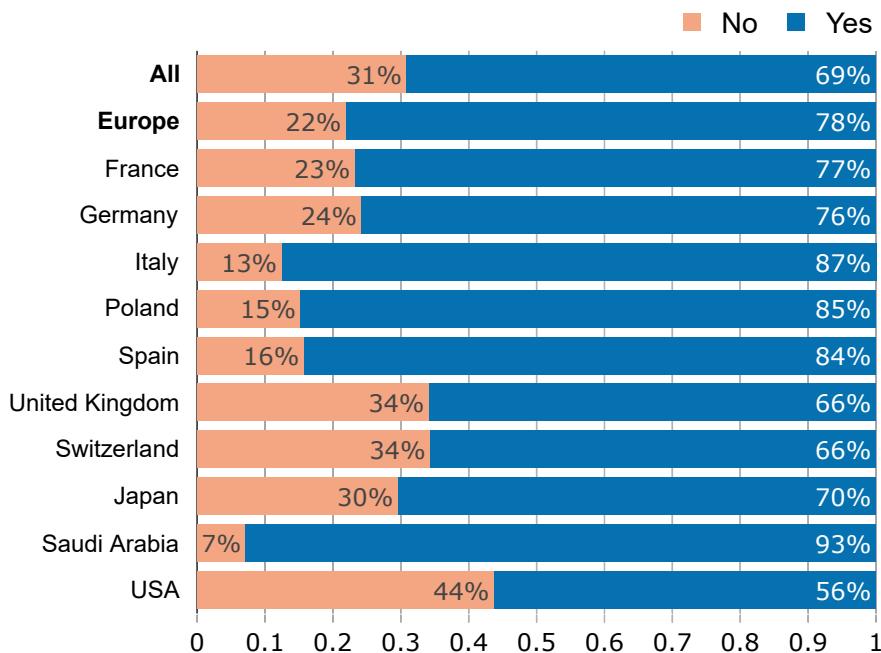

Figure S43: “If there was a worldwide movement in favor of a global program to tackle climate change, implement taxes on millionaires and fund poverty reduction in low-income countries, to what extent would you be willing to be part of that movement? (Multiple answers possible)” (Question 50).

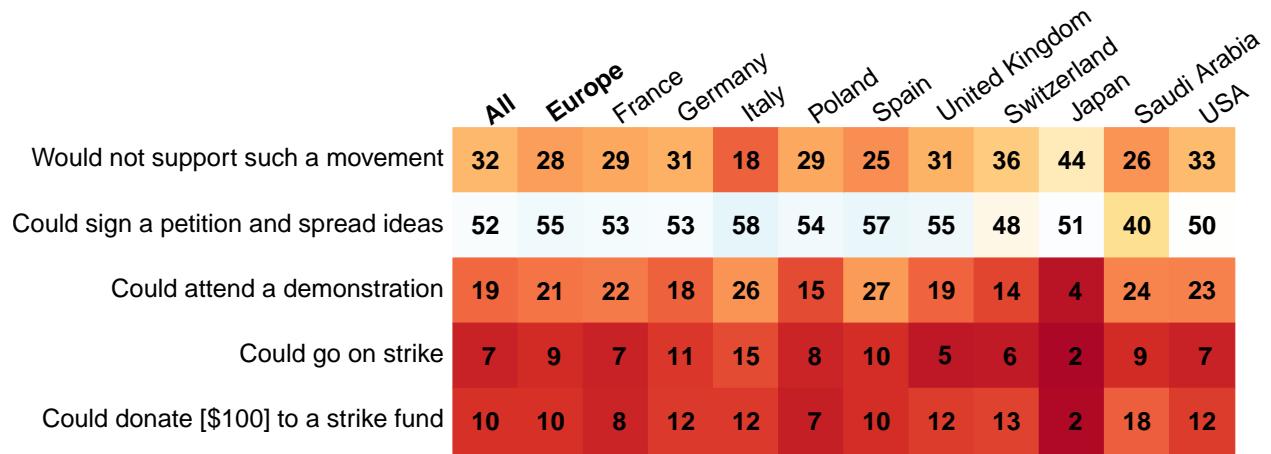

Figure S44: "Let us call "your political party" the party you voted for in the last election, or the party that represents your views most closely.

Imagine there was a worldwide coalition of political parties in favor of a common program to tackle climate change, implement taxes on millionaires and fund poverty reduction in low-income countries.

Would you be more likely to vote for your party if it were part of that coalition?"
(Question 51).

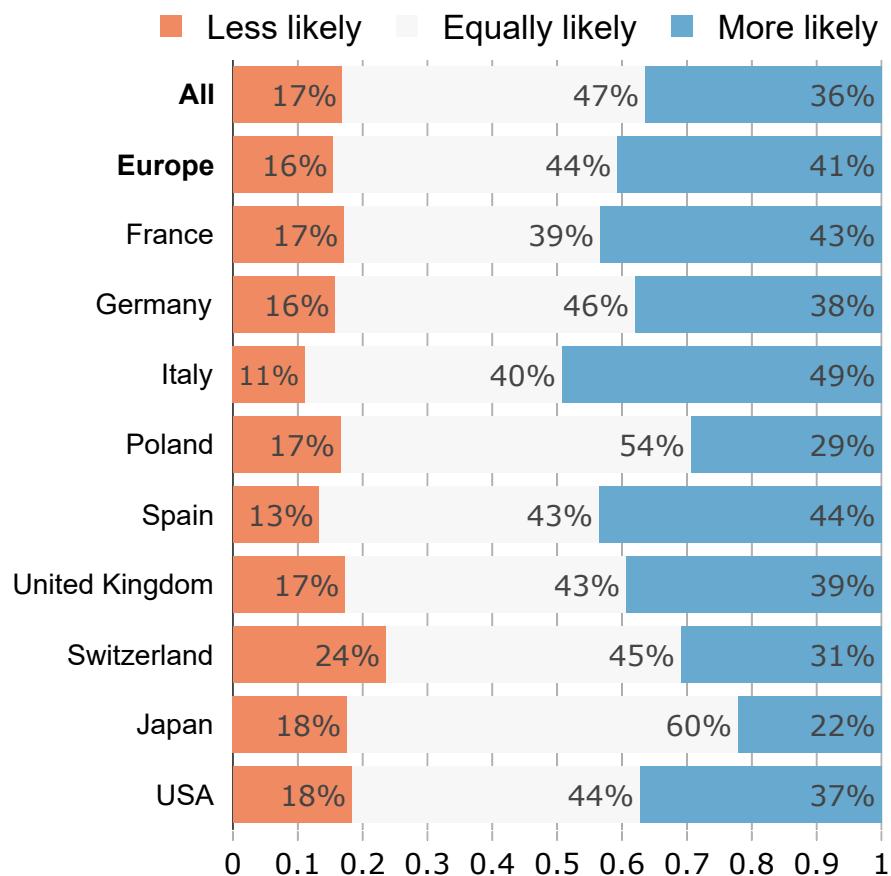

Figure S45: "Some people think that high-income countries should support low-income countries.

Among the different reasons given, which ones do you agree with? (Multiple answers possible)" (Question 52).

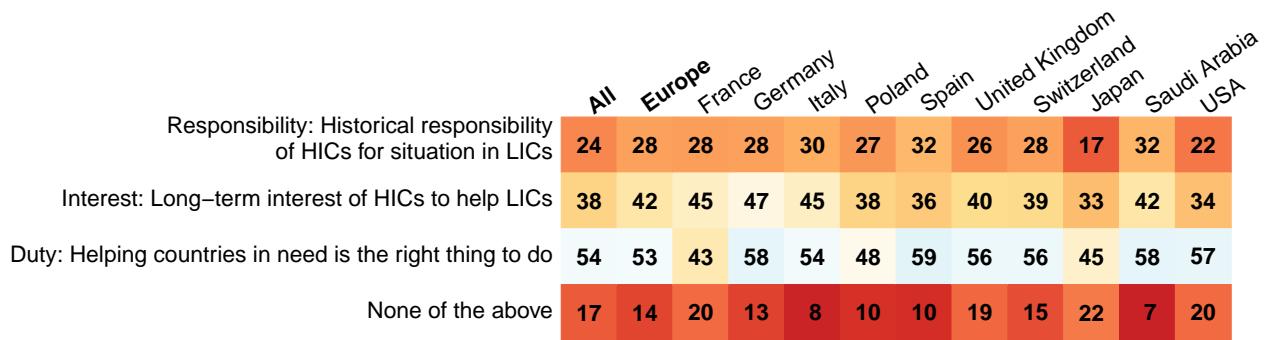

Figure S46: "Some people argue that Western countries owe reparations for colonization and slavery to former colonies and descendants of slaves.

Reparations could take the form of funding education and facilitating technology transfers, to address unequal opportunities passed down from the past.

Do you support or oppose reparations of this kind for colonization and slavery?" (Question 53).

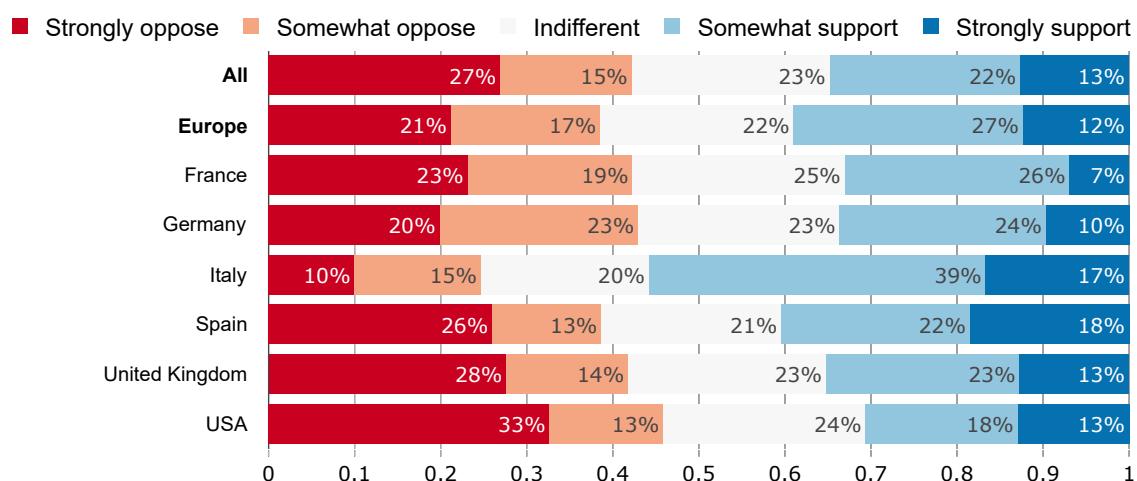

Figure S47: Average custom global redistribution. (Question 55).

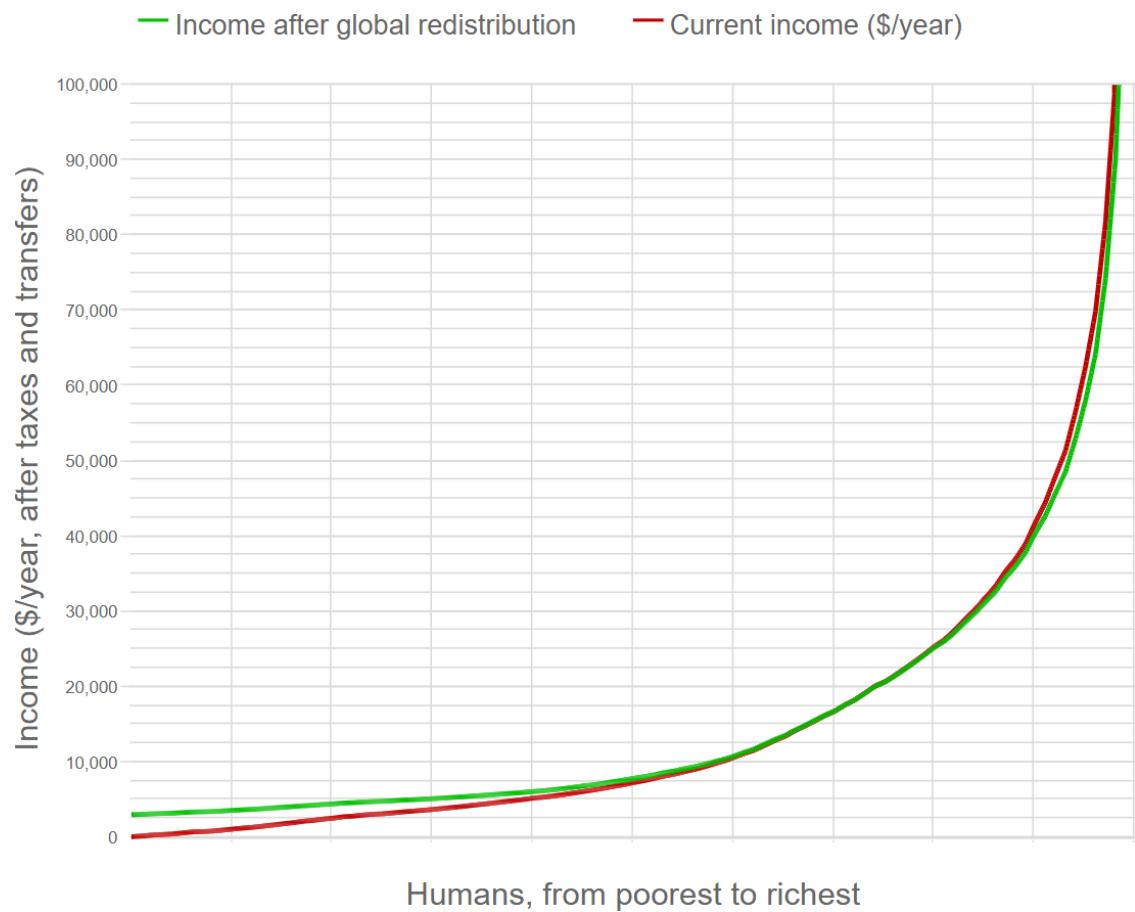

Figure S48: Global redistribution obtained from median custom parameters: 49% of winners; 18% of losers; degree of redistribution of 5 (out of 10). (Question 55).

Figure S50: “Comprehension question: one respondent with the expected answer will get [amount_lottery: \$100].

How would gasoline prices change as a result of the Global Climate Scheme?
Gasoline prices would...” (Correct answer: *increase*) (Question 60).

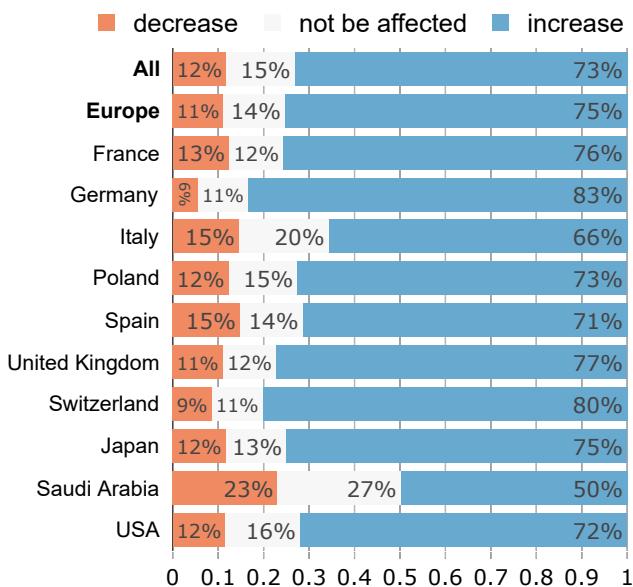

Figure S51: Relative agreement for: "To what extent do you agree or disagree with the following statement? "My taxes should go towards solving global problems."'" (Percentage of *Agree* or *Strongly agree* among non-*Neither agree nor disagree* responses). (Question 61).

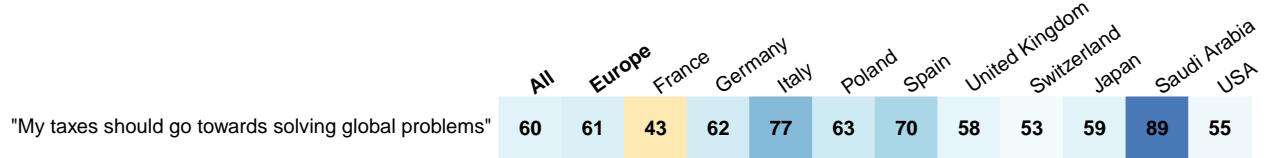

Figure S52: Absolute agreement for: "To what extent do you agree or disagree with the following statement? "My taxes should go towards solving global problems."'" (Percentage of *Agree* or *Strongly agree*). (Question 61).

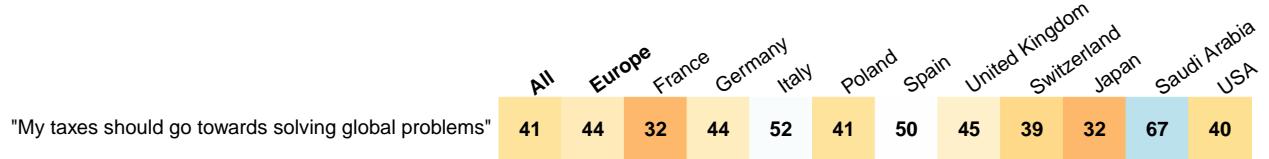

Figure S53: "Which group of people do you advocate for when you vote?" (Question 62).

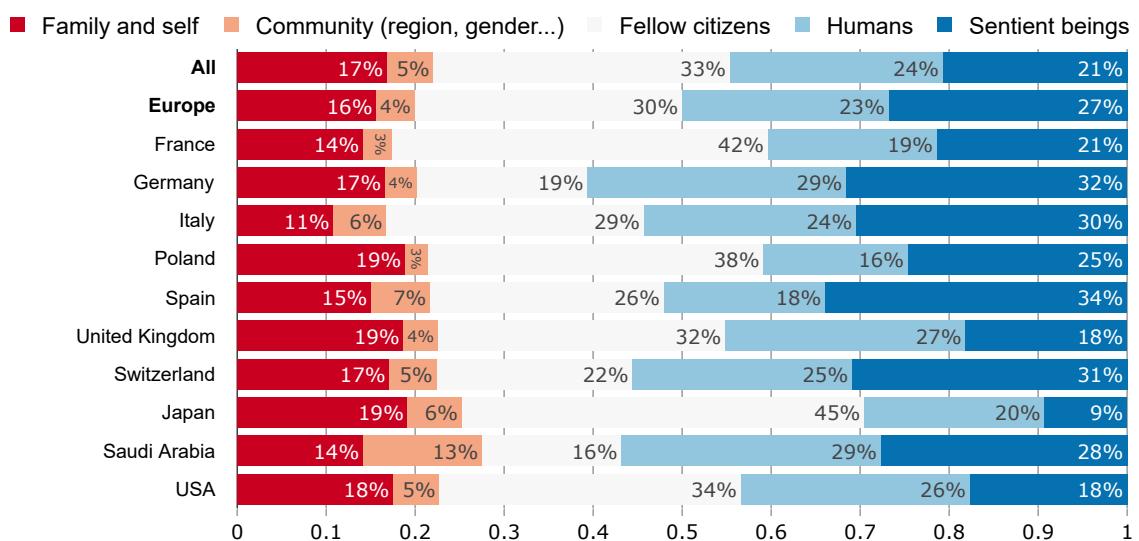

Figure S54: “Do you feel that this survey was politically biased?” (Question 63).

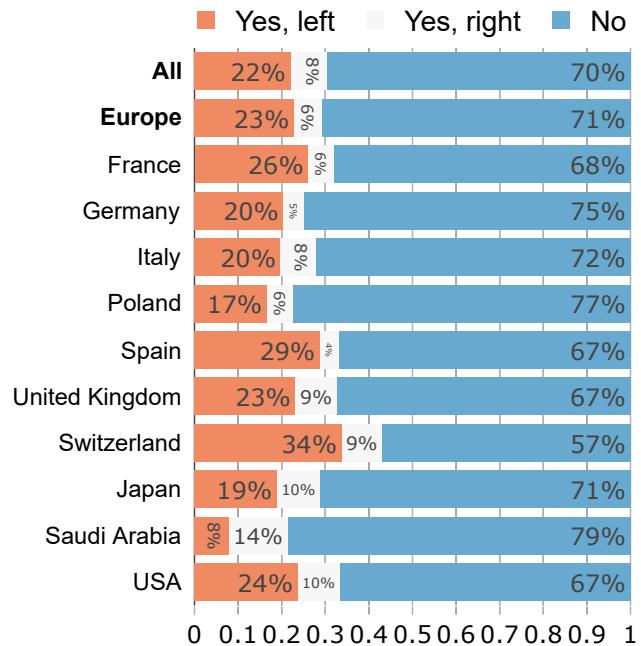

Figure S55: “How likely are you to become a millionaire at some point in your life?” (Question 15).

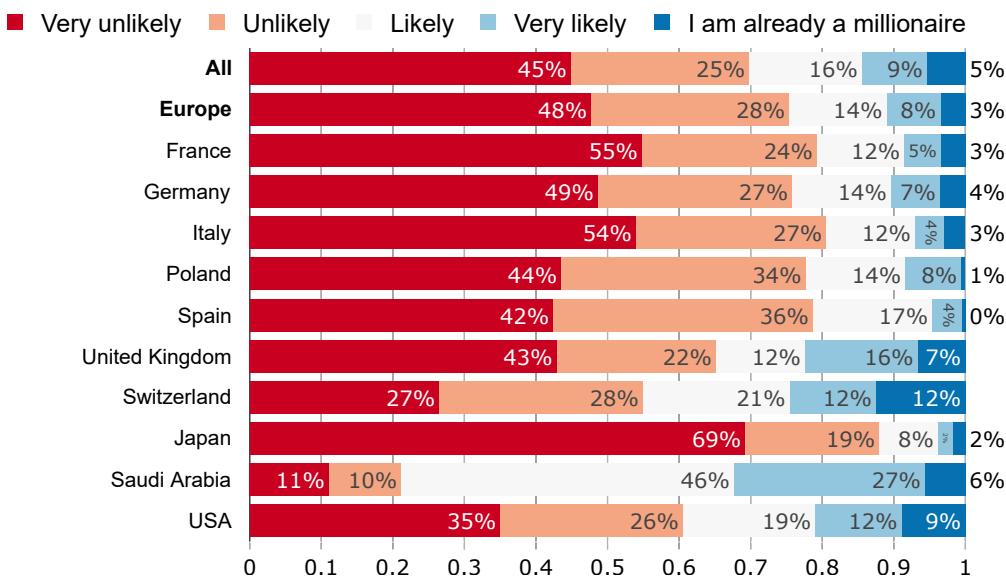

Figure S56: "Were you or your parents born in a foreign country?" (Question 5).

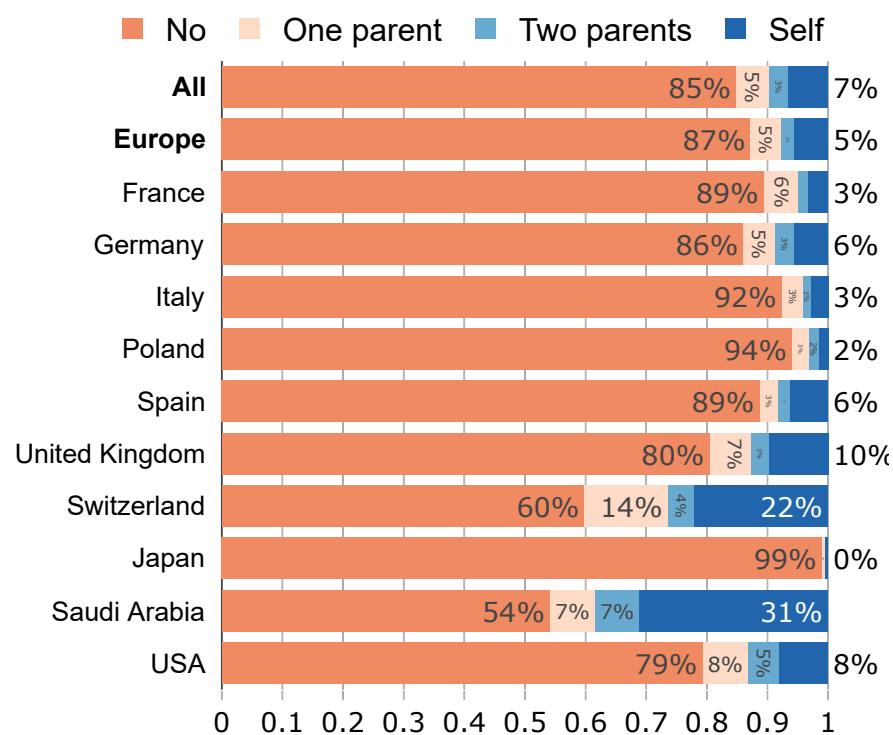

Figure S57: Vote in the last election, compared to actual results among voters. (Questions 16, 18).

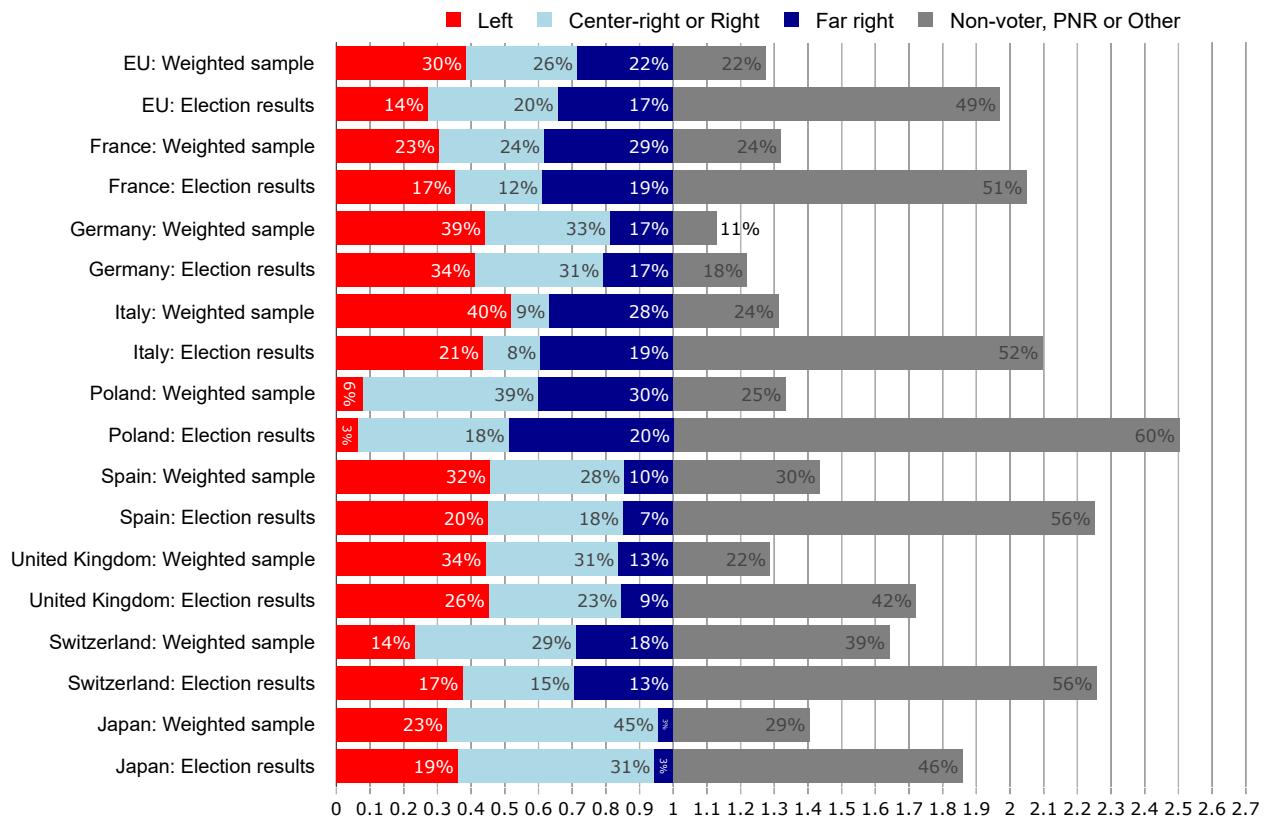

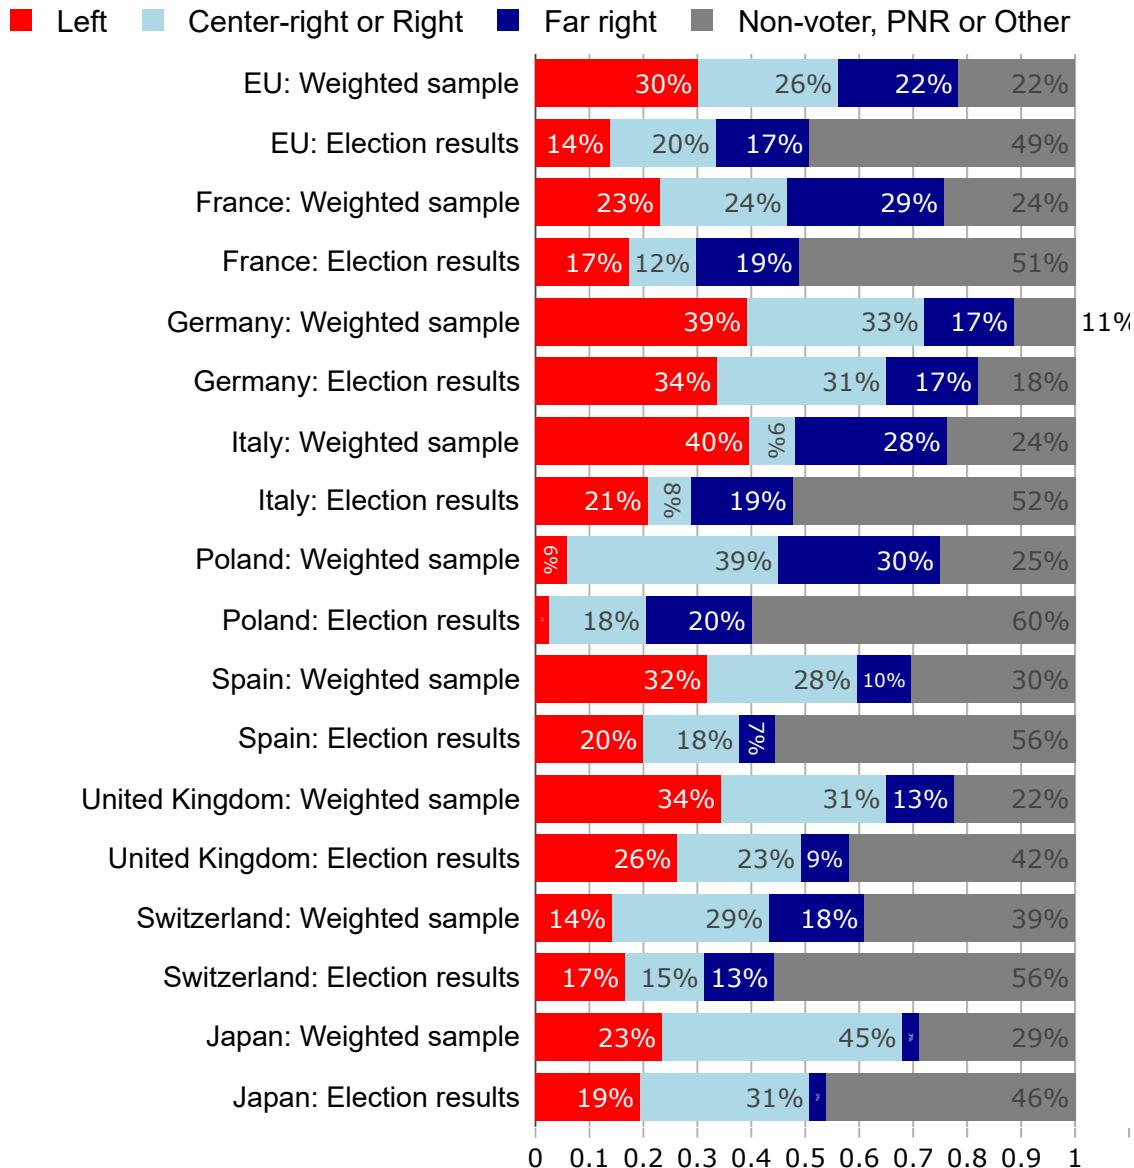

Figure S58: Vote in the last election, compared to actual results on the entire population. (Questions 16, 18).

B Questionnaire

The U.S. version of the questionnaire is presented. Features that vary across countries are put in square brackets within the question text, as follows: [feature_name: U.S. value]. Feature values for each country are given in [this spreadsheet](#). Random branches or conditions for displaying the question are specified in square brackets before the question text (cf. Figure 2 for the survey flow). The question text is followed by square brackets that refer to Figures and Tables presenting the question results, and the variable name(s) corresponding to the question. Finally, response options are displayed in italics. Unless otherwise specified, response is compulsory and a single response must be chosen.

Welcome

1. Welcome to this survey!

This survey is **anonymous** and is conducted **for research** purposes on a representative sample of [sample_size: 3,000] [nationality: American people].

It takes around 20 min to complete.

The survey contains lotteries and awards for those who get the correct answer to some comprehension questions.

If you are attentive and lucky, **you can win up to [amount_lottery: \$100]**.

Please answer every question carefully.

By clicking on the button below, you consent to the terms and conditions.

Socio-demographics

2. What is your gender? [gender]

Woman; Man; Other

3. What is your country? [hidden_country]

4. What is your age? [age_exact, age]

Below 18; 18 to 20; 21 to 24; 25 to 29; 30 to 34; 35 to 39; 40 to 44; 45 to 49; 50 to 54; 55 to

59; 60 to 64; 65 to 69; 70 to 74; 75 to 79; 80 to 84; 85 to 89; 90 to 99; 100 or above

5. Were you or your parents born in a foreign country? [Figure S56; foreign]

Yes, I was born in a foreign country; Not me but both my parents were born in a foreign country; Not me but one of my parents was born in a foreign country; No, I was born in this country and my parents too

6. Do you live with your partner (if you have one)? [couple]

Yes; No

7. How many people are there in your household?

The household includes: **you**, your spouse, **your family members** who live with you, and your dependents (not flatmates). [hh_size]

1; 2; 3; 4; 5 or more

8. How many children under the age of 14 live with you? [Nb_children__14]

0; 1; 2; 3; 4 or more

9. [new page] [Only in: US] What race or ethnicity do you identify with? (Multiple answers are possible) [race]

White; Black or African American; Hispanic; Asian; American Indian or Alaskan Native; Native Hawaiian or Pacific Islander; Other; Prefer not to say

10. What is the [periodicity_text: monthly] [income_type: gross] income of your household, [income_type_long: after taxes and transfers]?

This includes all sources of income: wages, pensions, welfare payments, property income, dividends, self-employment earnings, Social Security benefits, and income from other sources. [income]

[All but RU, US: Custom thresholds, taking into account household composition Questions 6-8, and corresponding to the country's deciles and quartiles of standard of living, cf. the sheet "Income" in this spreadsheet;

RU, US: Items based on household total income deciles and quartiles, namely in US: Less than \$17,000; between \$17,001 and \$30,000; between \$30,001 and \$36,000; between \$36,001 and \$43,000; between \$43,001 and \$56,000; between \$56,001 and \$72,000; between \$72,001 and \$91,000; between \$91,001 and \$115,000; between \$115,001 and \$130,000; between \$130,001 and \$150,000; between \$150,001 and \$213,000; More than \$213,000; I prefer not to answer]

11. What is your highest completed education level? [education]
[Country-specific, usually: 0-1 Primary or less; 2 Medium school; 2 Some high school; 3 High school diploma; 3-4 Vocational training; 5 Short-cycle tertiary; 6 Bachelor's; 7-8 Master's or higher]
12. What is your employment status? [employment_status]
Full-time employed; Part-time employed; Self-employed; Unemployed (searching for a job); Student; Retired; Inactive (not searching for a job)
13. [Only the first digits asked in RU, SA] What is your zipcode?
We ask for the zipcode to balance the sample in terms of degree of urbanization (rural, town or city). The survey will be terminated if your zipcode is not recognized.
[zipcode]
14. Are you a homeowner or a tenant? (Multiple answers are possible) [home_owner]
Tenant; Owner; Landlord renting out property; Hosted free of charge
15. [new page] How likely are you to become a millionaire at some point in your life?
[Figure S55; millionaire]
Very unlikely; Unlikely; Likely; Very likely; I am already a millionaire
16. [Except in: RU, SA] Did you vote in the [election: 2024 presidential election]? [Figures S58-S57; voted]
Yes; No; Prefer not to say; I didn't have the right to vote in [country_name: the United States].

Vote

17. [Only in: SA] What is your nationality?
If you have both the Saudi and a foreign nationality, choose "Saudi". [nationality_SA]
Saudi; India; Bangladesh; Syria; Yemen; Egypt; Pakistan; Indonesia; Philippines; Sudan; Myanmar; Jordan; Sri Lanka; Nepal; Turkey; Somalia; Lebanon; Other
18. [Except in: RU, SA] [If voted: Which candidate did you vote for in the [election: 2024 presidential election]?; Otherwise: Even if you did not vote in the [election: 2024 presidential election], please indicate the candidate that you were most likely to have voted for or who represents your views more closely.] [Figures S58-S57; vote]

[Candidates/parties with at least 1% of votes, e.g. in US: *Harris; Trump; Other; Prefer not to say*. In FR, IT, PL, ES, election is the 2024 European election]

Open-ended field

Revenue split of global tax

[*Two random branches; field, variant_split*]

24. [Branch: Few] Imagine a wealth tax applied to households with a net worth above [tax_threshold: \$5 million], implemented in every country around the world.

[tax_country_name: In the U.S.], the tax revenues collected would be [tax_revenue: \$514 billion] per year (that is, [tax_revenue_gdp: 2]% of [tax_country_gdp: U.S. GDP]), while it would be [LIC_revenue: \$1 billion] in all low-income countries combined (700 million people live in a low-income country, most of them in Africa). Each country would retain part of the revenues it collects and use it for different domestic purposes. The remaining part would be pooled globally to finance sustainable development in low-income countries.

What percentage of the global wealth tax revenue should be allocated to each category?

The total allocation must sum to 100%.

[*Figures 4, S24-S25; revenue_split_few*]

Domestic: Education and Healthcare; Domestic: Social welfare programs; Domestic: Reduction in the federal income tax; Domestic: Reduction of the deficit; Global: Education, Healthcare and Renewable energy in low-income countries

25. [Branch: Many] Imagine a wealth tax applied to households with net worth above [tax_threshold: \$5 million], implemented in all countries around the world.

[tax_country_name: In the U.S.], the tax revenues collected would be [tax_revenue: \$514 billion] per year (that is, [tax_revenue_gdp: 2]% of [tax_country_gdp: U.S. GDP]), while it would be [LIC_revenue: \$1 billion] in all low-income countries combined (700 million people live in a low-income country, most of them in Africa). Each country would retain part of the revenues it collects and use it for different domestic purposes. The remaining part would be pooled globally to finance sustainable development.

What percentage of the global wealth tax revenue should be allocated to each

category?

The total allocation must sum to 100%.

[*Figures 4, S26-S27; revenue_split_many*]

[Five items are chosen at random among the 13 possible ones: *Domestic: Education and Research; Domestic: Healthcare; Domestic: Defense; Domestic: Deficit reduction; Domestic: Justice and Police; Domestic: Retirement pensions; Domestic: Social welfare programs; Domestic: Infrastructure (public transport, water systems...); Domestic: Income tax reduction; Global: Education and Healthcare in low-income countries; Global: Renewable energy and infrastructure to cope with climate change; Global: Loss and Damage Fund (to rebuild after climate disasters); Global: Forestation and biodiversity projects*]

Warm glow – moral substitute

[*Three random branches: NCS; Donation; control group; variant_warm_glow*]

26. [Branch: NCS] Do you agree with the following policy?

Climate Scheme:

To meet the national climate target, a limited number of permits to emit greenhouse gases would be issued nationally. Polluting firms would be required to buy permits to cover their greenhouse gas emissions. Such a policy would make fossil fuel companies pay for their emissions and gradually raise the price of fossil fuels. Higher prices would encourage people and companies to use less fossil fuels, reducing greenhouse gas emissions.

The revenues generated by the sale of permits would finance an equal cash transfer. Each [country_adjective: American] would receive [amount_expenses: \$115][periodicity: per month], thereby offsetting price increases for the average [country_adjective: American].

Do you support the Climate Scheme? [*Figures 6, S29; ncs_support*]

Yes; No

27. [Branch: Donation] By taking this survey, you will be automatically entered into a lottery to win up to [amount_lottery: \$100].

Should you be selected in the lottery, you will have the option to channel a part of this additional compensation to the charity *Just One Tree* to plant trees.

In case you win the lottery, what share of the [amount_lottery: \$100 prize] would you donate to plant trees? [Figures 9a, S28 ; donation]

Share to plant trees

Cap & Share

28. Do you support the following policy?

To ensure that you have attentively read the description, we will ask some comprehension questions later in the survey: those who get correct answers can win [amount_lottery: \$100].

Global Climate Scheme:

In 2015, all countries agreed to contain global warming "well below +2 °C". To achieve this, there is a maximum amount of greenhouse gases we can emit globally.

To meet the climate target, a limited number of permits to emit greenhouse gases would be issued globally. Polluting firms would be required to buy permits to cover their greenhouse gas emissions. Such a policy would make fossil fuel companies pay for their emissions and gradually raise the price of fossil fuels. Higher prices would encourage people and companies to use less fossil fuels, reducing greenhouse gas emissions.

In accordance with the principle that each human has an equal right to pollute, the revenues generated by the sale of permits could finance a global basic income. Every adult would receive [amount.bi: \$20][periodicity: per month], thereby lifting 600 million people who earn less than \$2 a day out of extreme poverty.

The typical [national: American] would lose out financially [amount.lost: \$105][periodicity: per month] (as he or she would face around [price_increase: 2]% in price increases, which is higher than the [amount.bi: \$20][periodicity: per month] they would receive).

The policy could be implemented as soon as 100 countries agree to it. Countries that would refuse to take part in the policy could face sanctions (like tariffs) from the rest of the world and would be excluded from the basic income program.

Do you support the Global Climate Scheme? [Figures 6, 9a, S29; gcs_support]

Yes; No

[new page] [Two random branches: *own*; *US*; Figure S29; *gcs_belief*, *variant_belief*]

29. [Branch: *US*] According to you, **what percentage of [belief_nationality: All but US: Americans; US: Europeans] would answer Yes to the previous question** (considering that typical [belief_nationality] would lose [belief_loss: \$140] per month from the Global Climate Scheme)?

The respondent who is closest to the correct value will get [amount_lottery: \$100].

Percentage of [belief_nationality] in favor of Global Climate Scheme

30. [Branch: *own*] According to you, **what percentage of [nationality: fellow citizens] would answer Yes to the previous question?**

The respondent who is closest to the correct value will get [amount_lottery: \$100].

Percentage of [nationality: fellow citizens] in favor of Global Climate Scheme

Cap & Share non-universal

[Four random branches: *low*; *mid*; *high*; *high_color*; Figures 6, S29; *ics_support*]

31. [Branch: *low*] Below is a map showing a possible set of countries that would participate in the Global Climate Scheme previously described.

These countries include India, the European Union, as well as all Africa, Latin America, South-Asia and South-East Asia.

Collectively, these [nb_countries_low: 145] countries account for [emissions_low_without: 40]% of global emissions (if [*ics_country*: the U.S.] joined them, [emissions_low_with: 40]% of global emissions would be covered).

32. [Branch: *mid*] Below is a map showing a possible set of countries that would participate in the Global Climate Scheme previously described.

These countries include China, India, as well as all Africa, Latin America, South-Asia and South-East Asia.

Collectively, these 119 countries account for 56% of global emissions (if [ics_country: the U.S.] joined them, [emissions_mid_with: 70]% of global emissions would be covered).

33. [Branch: high] Below is a map showing a possible set of countries that would participate in the Global Climate Scheme previously described.

These countries include China, India, [text_countries_high: the European Union, Japan, the United Kingdom], Canada, South Korea, as well as all Africa, Latin America, South-Asia and South-East Asia.

Collectively, these [nb_countries_high: 153] countries account for [emissions_high_without: 71]% of global emissions (if [ics_country: the U.S.] joined them, [emissions_high_with: 86]% of global emissions would be covered).

34. [Branch: high_color] Below is a map showing a possible set of countries that would participate in the Global Climate Scheme previously described.

These countries include China, India, [text_countries_high: the European Union, Japan, the United Kingdom], Canada, South Korea, as well as all Africa, Latin America, South-Asia and South-East Asia.

Collectively, these [nb_countries_high: 153] countries account for [emissions_high_without: 72]% of global emissions (if [ics_country: the U.S.] joined them, [emissions_high_with: 86]% of global emissions would be covered).

Note that a provision would prevent the Global Climate Scheme from harming low- and middle-income countries: this is why countries like China, Mexico, or Egypt are in white on the map (they would neither win nor lose financially).

35. Do you support [ics_country: the U.S.] joining the Global Climate Scheme, in case it

is adopted by the above countries? [Figures 6, S29; ics_support]

Yes; No

Warm glow – realism

36. [Two random branches: with or without this informational text.] To ensure that you have attentively read the description below, we will ask some comprehension questions later in the survey: those who get correct answers can win \$100.

In several international organizations, **countries have agreed to demonstrate some degree of solidarity in addressing global challenges.**

Negotiations are ongoing to implement specific mechanisms for sustainable development.

Here are a few examples:

🚢 In 2025, to reduce carbon emissions from shipping, **the International Maritime Organization adopted an international levy on excess emissions from maritime fuel, that should partly finance low-income countries.**

♦ Since 1970, **developed countries have agreed to contribute 0.7% of their GDP in foreign aid and development assistance.**

➤ In international climate negotiations, **developed countries have committed to finance climate action in developing countries.** In 2009, they committed to provide \$100 billion per year by 2020. In 2023, all countries agreed to set up a fund to help vulnerable countries cope with loss and damage from climate change. In 2024, the \$100 billion goal was increased to \$300 billion per year by 2035.

☒ In 2021, 136 countries adopted a minimum tax rate of 15% on multinational profits.

♥ In 2024, under the leadership of Brazil, **the G20 considered the introduction of a global tax of 2% on the wealth of billionaires.**

🌐 In 2024, the UN General Assembly adopted the Pact for the Future, which foresees a reform of the UN Security Council to limit the power of its five permanent member and expand it to new members.

🕒 Led by the Prime Minister of Barbados and supported by the UN Secretary Gen-

eral, the Bridgetown initiative seeks a new financial system that would drive financial resources towards climate action and sustainable development. [Figure 9b; info_solidarity]

37. According to you, how likely is it that international policies involving significant transfers from high-income countries to low-income countries will be introduced in the next 15 years? [Figure 9b; likely_solidarity]

Very unlikely; Unlikely; Likely; Very likely

38. Do you support or oppose the following policies?

[Only in PL, SA: (As some items refer to “developed countries”, note that we consider [Saudi Arabia] to be a developed country in this question.)] [Figures 10, S30-S32; solidarity_support]

[Item order is randomized]

- Institutions like the World Bank investing in many more sustainable projects in lower-income countries, and offering lower interest rates (the Bridgetown initiative)
- Developed countries financing a fund to help vulnerable countries cope with loss and damage from climate change
- Expanding the UN Security Council (in charge of peacekeeping) to new permanent members such as India, Brazil, and the African Union, and restricting the use of the veto
- Raising the globally agreed minimum tax rate on profits of multinational firms from 15% to 35%, closing loopholes and allocating revenues to countries where sales are made
- Debt relief for vulnerable countries by suspending repayments until they are better able to repay, promoting their development
- An international levy on carbon emissions from shipping, funding national budgets in proportion to population
- An international levy on carbon emissions from aviation, raising ticket prices by 30% and funding national budgets in proportion to population
- Developed countries providing \$300 billion a year (0.4% of their GDP) to finance climate action in developing countries

- Developed countries contributing at least 0.7% of their GDP in foreign aid and development assistance
- A minimum tax of 2% on the wealth of billionaires, in voluntary countries

Strongly oppose; Somewhat oppose; Indifferent; Somewhat support; Strongly support

NCQG

[Two random branches: Full; Short; ncqg_fusion, variant_ncqg]

39. [Branch: Full] **At international climate negotiations, developing countries call for larger provision of "climate finance": the financing of climate action from developed countries in developing countries.** [developed_note: (Note that we consider Saudi Arabia to be a developed country in this question.)]

There are two kinds of climate finance: grants (that is, donations) and loans. In 2022, \$26 billion was provided as grants and the rest as loans, for a total of \$116 billion.

In 2009, developed countries agreed to mobilize \$100 billion per year in climate finance by 2020. In 2024, they committed to raise this goal to \$300 billion by 2035. None of the goals specify which share should be provided as grants.

Below are different positions on the amount of climate finance that should be provided in 2035, all expressed in grant-equivalent terms (that is, not counting loans):

- \$0: There should be no contributions from developed countries to climate action in developing countries.
- \$26 billion (0.04% of developed countries' GDP): The current amount, consistent with the old (2020) goal.
- \$100 billion (0.14% of GDP): The old (2020) goal, if all climate finance were provided as grants.
- \$300 billion (0.43% of GDP): The new (2035) goal, if all climate finance were provided as grants.
- \$600 billion (0.86% of GDP): The goal called for by India, a position shared by most developing countries.
- \$1,000 billion (1.43% of GDP): The goal called for by Climate Action Network (a

network of NGOs including Greenpeace, Oxfam, and WWF).

- \$5,000 billion (7.14% of GDP): The goal called for by Demand Climate Justice (a network of NGOs including 350.org and the World Council of Churches)

If you could choose the amount of climate finance provided by developed countries to developing countries in 2035, what amount would you choose (in grant-equivalent terms)?

[Figure S34; ncqg_full]

[Item order is randomly reversed or not]

\$0; \$300 billion; \$600 billion; \$26 billion; \$100 billion; \$1,000 billion; \$5,000 billion

40. [Branch: Short] **"Climate finance" designates the financing of climate action from developed countries in developing countries.** [developed_note: (Note that we consider Saudi Arabia to be a developed country in this question.)]

There are two kinds of climate finance: grants (that is, donations) and loans. The large majority is currently provided as loans.

In 2009, developed countries agreed to mobilize \$100 billion per year in climate finance. In 2024, they committed to triple this goal by 2035. None of the goals specify which share should be provided as grants.

At international climate negotiations, developing countries call for larger provision of climate finance, particularly in the form of grants.

If you could choose the level of climate finance provided by developed countries to developing countries in 2035, what would you choose?

[Figure S33; ncqg]

[Item order is randomly flipped or not]

Stop all provision of climate finance.;

Reduce the provision of climate finance.;

Maintain current contributions (\$26 billion per year in grants, that is 0.04% of developed countries' GDP, and \$80 billion in loans, or 0.1% of GDP).;

Meet the newly agreed goal by tripling grants and loans (\$100 billion in grants, or 0.15% of GDP).;

Increase climate finance to a level between what developed countries have agreed and what

*developing countries are asking for (\$300 billion in grants, or 0.45% of GDP).;
Increase climate finance to match what developing countries are asking for (\$600 billion in grants, or 0.9% of GDP).;
Increase climate finance to match what NGOs are asking for (at least \$1,000 billion per year in grants, that is 1.4% of GDP, is what Greenpeace, Oxfam, WWF, and the World Council of Churches ask for).*

Wealth tax depending on sets of countries

[Three random branches: Global; HIC; Int'l; Figures 7, S35; wealth_tax_support, variant_wealth_tax]

41. [Branch: Global] **Imagine an international tax on individuals with net worth above [wealth_threshold: \$1 million].**

Only wealth above [wealth_threshold: \$1 million] would be taxed, at a rate of 2%. Each country would retain 70% of the revenues it collects, while 30% would be pooled at the global level to finance public services in low-income countries (in particular, access to drinking water, healthcare, and education in Africa).

Say we are in 2030. **Imagine that all other countries in the world adopt this policy. Do you support [country_name: the United States] adopting this international tax on millionaires?**

Yes; No

42. [Branch: HIC] **Imagine an international tax on individuals with net worth above [wealth_threshold: \$1 million].**

Only wealth above [wealth_threshold: \$1 million] would be taxed, at a rate of 2%. Each country would retain 70% of the revenues it collects, while 30% would be pooled at the global level to finance public services in low-income countries (in particular, access to drinking water, healthcare, and education in Africa).

Say we are in 2030. **[hic_tax: Imagine that all other high-income countries (such as the European Union, Japan, and Canada) adopt this policy and some middle-income countries (such as China) do not.]**

Do you support [country_name: the United States] adopting this international tax on millionaires?

Yes; No

43. [Branch: Int'l] **Imagine an international tax on individuals with net worth above [wealth_threshold: \$1 million].**

Only wealth above [wealth_threshold: \$1 million] would be taxed, at a rate of 2%. Each country would retain 70% of the revenues it collects, while 30% would be pooled at the global level to finance public services in low-income countries (in particular, access to drinking water, healthcare, and education in Africa).

Say we are in 2030. **[intl_tax: Imagine that some countries (such as the European Union) adopt this policy and others (such as Japan, Canada, and China) do not.] Do you support [country_name: the United States] adopting this international tax on millionaires?**

Yes; No

Scenarios & radical tax

[Scenario A & B are randomly interverted.]

44. Consider two possible scenarios for the world for the next 20 years.

Scenario A:

Most countries implement coordinated policies to limit global warming to +2°C and reduce inequality. The world greatly reduces greenhouse gas emissions and is on track to meet its climate target. Taxes on millionaires fund the installation of heat pumps, the thermal insulation of buildings, and improved public transportation. Yachts and private jets are phased out worldwide. Cars are all electric by 2045, and they are about the same price as internal combustion cars nowadays. By 2045, environmental regulations gradually double the price of heating fuel or gas, air travel, and beef. As a result, people fly half as much, eat half as much meat, and use more public transportation in 2045 than they did in 2025. Despite higher prices for polluting goods, the overall purchasing power is preserved, thanks to a decrease in sales tax that reduces the prices of non-polluting goods.

Scenario B:

Since 2025, no additional policies are implemented to address climate change or inequality. People maintain the same lifestyles as in 2025. For example, most people

continue to drive cars with internal combustion engines. Greenhouse gas emissions are stable. Global warming is expected to reach +3°C by 2100 and higher levels beyond that date. A warmer climate will cause more frequent and more severe droughts, heatwaves, wildfires, and floodings.

Apart from the elements described, the two scenarios are the same (for example, in terms of unemployment or crime).

Which scenario do you prefer for the future? [Figures 11, S36; sustainable_future]
Scenario A; Scenario B

[new page] [Two random branches: top1; top3; Figures 11, S37-S38; top_tax_support, variant_top_tax]

45. [Branch: top1] Currently, 2 billion people live in acute poverty, with less than [lcu_250: \$250][periodicity: per month].

The Sustainable Development Goals, adopted by all countries in 2015, aim to alleviate poverty and give access to healthcare, education, drinking water, and sanitation for all by 2030. Due to lack of funding, the world is not on track to meet these poverty reduction goals.

Poverty reduction could be funded by a global tax on individual income above [lcu_120k: \$120,000][periodicity_tax: per year].

The tax rate would be 15% for every [currency: dollar] over [lcu_120k: \$120,000] of income after existing taxes.

For example, a single person earning [lcu_130k: \$130,000][periodicity_tax: per year] after taxes would pay [lcu_1500: \$1,500] in additional taxes, or 15% of [lcu_10k: \$10,000] = [lcu_130k: \$130,000] – [lcu_120k: \$120,000]. Meanwhile, a married couple earning [lcu_200k: \$200,000][periodicity_tax: per year], [lcu_100k: \$100,000] for each of them, would go untaxed.

This tax would apply to the richest 1% of the world's population. [tax_country_name: In the United States], it would affect the richest [affected_top1: 8]% and redistribute [transfer_top1: 3]% of GDP to lower-income countries.

Do you support or oppose such a global tax on the richest people to finance global

poverty reduction?

Strongly oppose; Somewhat support; Strongly support; Somewhat oppose; Indifferent

46. [Branch: top3] Currently, 3 billion people live in deep poverty, with less than [lcu_400: \$400][periodicity: per month].

The Sustainable Development Goals, adopted by all countries in 2015, aim to alleviate poverty and achieve access to healthcare, education, drinking water, and sanitation for all by 2030. Due to lack of funding, the world is not on track to meet these poverty reduction goals.

Poverty reduction could be funded by a global tax on individual income above [lcu_80k: \$80,000][periodicity_tax: per year].

The tax rate would be 15% for every [currency: dollar] over [lcu_80k: \$80,000] of income after existing taxes, 30% over [lcu_120k: \$120,000], and 45% over [lcu_1M: \$1 million].

For example, a single person earning [lcu_90k: \$90,000][periodicity_tax: per year] after taxes would pay [lcu_1500_top3: \$1,500] in additional taxes, or 15% of [lcu_10k_top3: \$10,000] = [lcu_90k: \$90,000] – [lcu_80k: \$80,000]. Meanwhile, a married couple earning [lcu_150k: \$150,000][periodicity_tax: per year], [lcu_75k: \$75,000] for each of them, would go untaxed.

This tax would apply to the richest 3% of the world's population. [tax_country_name: In the United States], it would affect the richest [affected_top3: 18] and redistribute [transfer_top3: 8] of GDP to lower-income countries.

Do you support or oppose such a global tax on the richest people to finance global poverty reduction?

[Figures 11, S37-S38; top3_tax_support]

Strongly oppose; Somewhat support; Strongly support; Somewhat oppose; Indifferent

47. To show that you are attentive, please select "A little" in the following list: [attention_test]
Not at all; A little; A lot; A great deal

Preferred transfer means to LICs

48. Below are different ways to transfer resources to help reduce poverty in a low-income country.

How do you evaluate each of these options?

[Figures 13, S39-S41; transfer_how] [Item order is randomly flipped or not]

- Transfers to public development aid agencies which then finance suitable projects
- Transfers to the national government conditioned on the use of funds for poverty reduction programs
- Unconditional transfers to the national government
- Unconditional transfers to local authorities (municipality, village chief...)
- Transfers to local NGOs with democratic decision-making processes
- Cash transfers to parents (child allowances), to the disabled and to the elderly
- Unconditional cash transfers to each household

A wrong way; An acceptable way; A right way; The best way

Radical redistribution

49. Should governments actively cooperate to have all countries converge in terms of GDP per capita by the end of the century? [Figures 11, S42; convergence_support]

Yes; No; I prefer not to answer

50. If there was a worldwide movement in favor of a global program to tackle climate change, implement taxes on millionaires and fund poverty reduction in low-income countries, to what extent would you be willing to be part of that movement? (Multiple answers possible) [Figures 11, S43; global_movement]

I would not support such a movement.; I could sign a petition and spread ideas.; I could attend a demonstration.; I could go on strike.; I could donate [amount_lottery: \$100] to a strike fund.

51. [Except in: RU, SA] Let us call "your political party" the party you voted for in the last election, or the party that represents your views most closely.

Imagine there was a **worldwide coalition** of political parties in favor of a common program **to tackle climate change, implement taxes on millionaires and fund**

poverty reduction in low-income countries.

Would you be more likely to vote for your party if it were part of that coalition?

[Figures 11, S44; vote_intl_coalition] [Item order is randomly flipped or not]

*Yes, I would be **more likely** to vote for my party if it joined that coalition (or to vote for another party if only that other party joined the coalition).;*

*My choice would **not depend** on which parties are part of that coalition.;*

*No, I would be **less likely** to vote for my party if it joined that coalition.*

52. Some people think that high-income countries should support low-income countries.

Among the different reasons given, which ones do you agree with? (Multiple answers possible) [Figure S45; why_hic_help_lic] [Order of the first three items is randomized]

High-income countries have a historical responsibility for the current situation in low-income countries.;

In the long run, it is in the interest of high-income countries to help low-income countries.;

Helping those in need is the right thing to do. This is also true at the international level.;

None of the above.

53. [Only in: FR, DE, IT, ES, GB, US] Some people argue that Western countries owe reparations for colonization and slavery to former colonies and descendants of slaves. Reparations could take the form of funding education and facilitating technology transfers, to address unequal opportunities passed down from the past.

Do you support or oppose reparations of this kind for colonization and slavery?

[Figures 11, S46; reparations_support]

Strongly oppose; Somewhat oppose; Indifferent; Somewhat support; Strongly support

[Except in: RU] Custom redistribution

54. What is the [periodicity_text: yearly] income of your household **after taxes and social benefits?**

This includes all sources of income: salaries, pensions, allowances, welfare benefits, property income, etc.

My household earns ... [text_unit: \$ per year] (answer with no comma, no space, no

period):

[income_exact]

55. [new page] If you could redistribute income at the global level, what would you do? In this question, we let you choose your preferred parameters for a redistribution of income at the world level.

If you prefer to skip this question, check the corresponding box at the bottom of the page.

The worldwide redistribution of income would take the form of additional policies, taxes, and transfers, on top of existing ones.

These policies would lower the income of the richest (the losers from the redistribution) and increase the income of the poorest (the winners).

Below you will find a graph of the world distribution of after-tax income and three sliders that vary it. The current distribution is in red, and your custom one is in green.

The first two sliders control the proportion of winners and the proportion of losers, among all humans. The third slider controls the degree of redistribution from the richest to the poorest.

If you do not want new policies to reduce global inequality, you can set the third slider to zero.

You need to move the sliders (by holding the mouse down on the little squares and moving to the side) to make the green curve evolve: the idea is to move the sliders **until you get a green curve you are satisfied with**.

Examples of income changes after your proposed redistribution:

Now	After
0 [text_unit: \$ per year] [now_10k] [text_unit]	[after_0] [text_unit: \$ per year] [after_10k] [text_unit]
[now_60k] [text_unit]	[after_60k] [text_unit]
[now_100k] [text_unit]	[after_100k] [text_unit]
Your <i>individual</i> income	
[own] [text_unit]	[after_own] [text_unit]

[Figures 14, S47-S49] I am satisfied with my custom redistribution.;
I want to skip this question.

Well-being (for another project)

[Four random branches: gallup_0; gallup_1; wvs_0; wvs_1; well_being, variant_well_being]

56. [Branch: gallup_0] Please imagine a ladder, with steps numbered from 0 at the bottom to 10 at the top. The top of the ladder represents the best possible life for you and the bottom of the ladder represents the worst possible life for you.

On which step of the ladder would you say you personally feel you stand at this time? [well_being_gallup_0]

Worst possible 0; 1; 2; 3; 4; 5; 6; 7; 8; 9; Best possible 10

57. [Branch: gallup_1] Please imagine a ladder, with steps numbered from 1 at the bottom to 10 at the top. The top of the ladder represents the best possible life for you and the bottom of the ladder represents the worst possible life for you.

On which step of the ladder would you say you personally feel you stand at this time? [well_being_gallup_1]

Worst possible 1; 2; 3; 4; 5; 6; 7; 8; 9; Best possible 10

58. [Branch: wvs_0] All things considered, how satisfied are you with your life as a whole these days? [well_being_wvs_0]

Completely dissatisfied 0; 1; 2; 3; 4; 5; 6; 7; 8; 9; Completely satisfied 10

59. [Branch: wvs_1] All things considered, how satisfied are you with your life as a whole these days? [well_being_wvs_1]

Completely dissatisfied 1; 2; 3; 4; 5; 6; 7; 8; 9; Completely satisfied 10

Comprehension

60. *Comprehension question: one respondent with the expected answer will get [amount_lottery: \$100].*

How would gasoline prices change as a result of the Global Climate Scheme?
Gasoline prices would... [Figure S50; gcs_comprehension] [Item order is randomly flipped or not]
increase; not be affected; decrease

Synthetic questions

61. To what extent do you agree or disagree with the following statement? "My taxes should go towards solving global problems." [Figures 11, S51-S52; my_tax_global_nation]
Strongly agree; Agree; Neither agree nor disagree; Disagree; Strongly disagree
62. Which group of people do you advocate for when you vote? [Figures 12, S53; group_defended]
Sentient beings (humans and animals); Humans; [country_adjective_plural: Americans]; People from my community (for example my region, my religion, my gender...); My family and myself

Feedback

63. Do you feel that this survey was politically biased? [Figure S54; survey_biased]
Yes, left-wing biased; Yes, right-wing biased; No, I do not feel it was biased
64. The survey is nearing completion. You can now enter any comments, thoughts, or suggestions in the field below. [Random answers can be found on bit.ly/fields2025; comment_field]

C Representativeness of the surveys

Table S1: Sample representativeness overall, in Europe, and in the European Union.

	All			Eu			EU		
	Pop.	Sample	Weighted sample	Pop.	Sample	Weighted sample	Pop.	Sample	Weighted sample

E The determination of a custom redistribution

In Question 55, respondents are asked for their preferred redistribution of the world's post-tax income. This custom redistribution is determined by modifying the current distribution using the respondent's three input parameters:

- The *proportion of winners*, i.e. the share of people (at the bottom of the distribution) advantaged by the custom redistribution;
- The *proportion of losers*, i.e. the share of people (at the top) disadvantaged by the redistribution;
- The *degree of redistribution*, ranging from 0/10 (no redistribution) to 10/10 (maximal redistribution).

The determination of the custom distribution given these parameters relies on the algorithm *Dis/adv* introduced by [Fabre \(2022\)](#). In that paper, [Fabre \(2022\)](#) surveyed two representative samples of French respondents. The first survey uncovered the median preferred parameters for a national income redistribution.¹³ The second survey showed that 52% supported the income redistribution defined using these parameters while only 26% opposed it. Furthermore, a majority among the French respondents who expressed an opinion agreed that it is a good idea to "determine the citizens' preferred tax schedule from a survey and then submit the proposal that would emerge from the survey to a referendum." Therefore, the algorithm *Dis/adv* applied to median preferred parameters has been validated both through the support for the resulting redistribution and through the support for such democratic method of preference aggregation to determine an income redistribution. Nonetheless, the algorithm *Dis/adv* is just a first attempt to adjust the tax schedule by aggregating citizens' preferences, and more appropriate methods may be proposed. Although [Fabre \(2022\)](#) finds that the algorithm *Dis/adv* fares better than another algorithm tested, the method still suffers from some limitations. In particular, the current method is difficult to understand for the users, and it only allows for redistribution from the rich to the poor (it would thus be inappropriate if the level of inequality were considered too low). Below, I describe the algorithm *Dis/adv*, available for use at

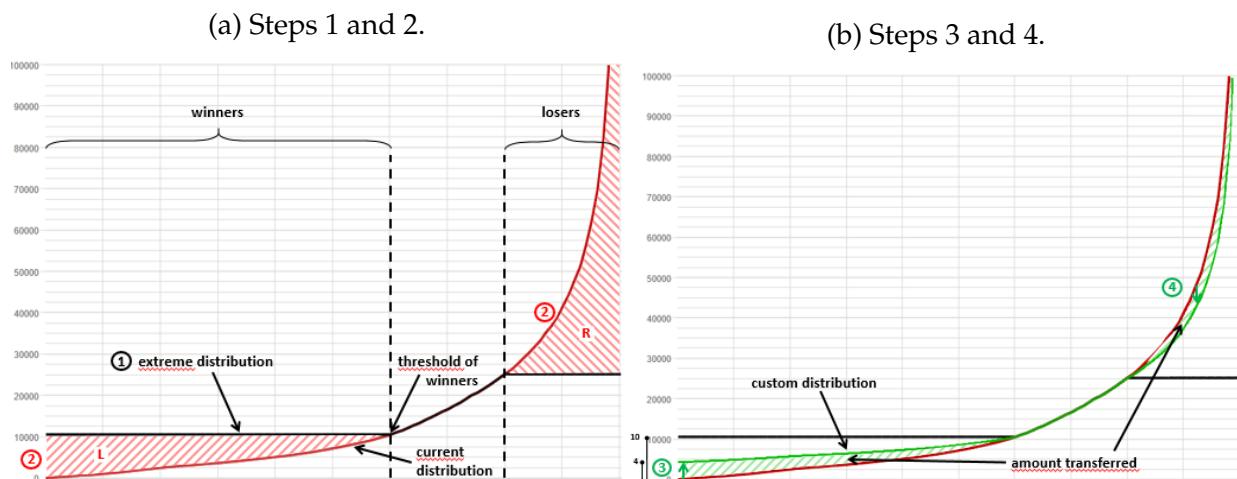

¹³The median preferred proportions of winners and losers were 50% and 10%, respectively. The median preferred degree of redistribution was defined indirectly, using the median preferred demogrant: €800/month. The resulting redistribution entailed 12% of GDP redistributed from the top 10% to the bottom 50%.

bit.ly/custom_redistr, and implemented in the R function `compute_custom_redistr` on github.com/bixiou/robustness_global_redistr/raw/main/code_robustness/2_prepare.R.

Algorithm Dis/Adv It is worth reminding that on a range of income (concerning people that are neither winner nor loser from the reform), both current and custom distributions coincide. The algorithm proceeds as follows:

1. Define the *extreme distribution* as the current distribution bounded by the income thresholds of winners and losers. In other words, draw two horizontal lines at each end of the distribution, by setting the incomes of winners to the income of the richest winner, and those of losers to income of the poorest loser.
2. Compute what can be redistributed on either side as the area between the extreme and current distributions: what can be given to winners on the left side (L) or taken on the right side (R). If and only if what can be given is lower than what can be taken ($L < R$, as in Figure S60), the left side is binding, and it determines the *amount transferred* from the rich to the poor: $\min\{L; R\} \cdot \text{degree}$.
3. On the binding side, define the custom distribution as a linear mixture between the current and extreme distributions, with the mixture parameter set by the *degree of redistribution*. In other words, starting from the current distribution, narrow the gap with the extreme distribution by a factor *degree*.

Figure S60: Algorithm for the custom redistribution, with parameters *winners*: 60%, *losers*: 20%, *degree*: 4/10.

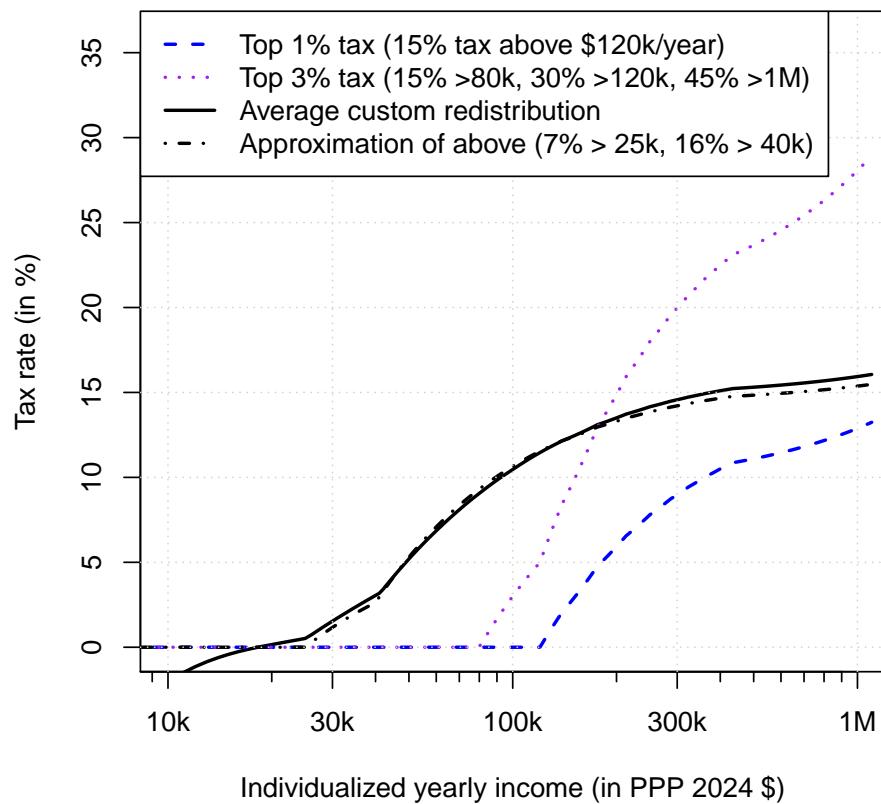

4. Adjust the non-binding side by narrowing the gap with the extreme distribution, using the unique mixture parameter that preserves aggregate income (so that the amount transferred is the same on both sides).¹⁴
5. [Optional step, used in the survey.] To increase the demigrant (i.e. the lowest income) and make the reform more progressive on the left side, try to replace the left side by a straight line. In other words, find the demigrant and the straight line between the demigrant and the threshold of winners that respects the amount transferred. If this straight line crosses the current distribution or if it implies a regressive redistribution (in that some income would increase less than a higher income), abandon the straight line and keep the custom redistribution as is.

Once the custom redistribution has been determined, it is straightforward to compute the additional tax schedule required to attain it.¹⁵ Figure S61 presents the tax schedule required to attain the average custom redistribution (weighted over all respondents). Figure S61 shows that (on the losers' side) this redistribution can be approximated by additional marginal tax rates of 7% above \$25,000 per year, and 16% above \$40,000. Figure S61 also compares this tax schedule with those associated with the radical income redistribution tested in Questions 45-46: While the average custom redistribution features a much larger tax base than the radical tax targeting the top 3% (as it taxes the top 28%), its top tax rate is three times lower, so that the two redistributions entail similar transfers from the rich to the poor, at 5.1% of the world's income.

¹⁴While we do not account for behavioral responses, one can adjust the algorithm to account for them. It suffices to define a post-reform aggregate income, which can be lower than the pre-reform one if the reform disincentivizes economic activity.

¹⁵For a sophisticated calculation of the required tax schedule, which allows for behavioral responses and a gradual implementation, see Appendix IX of [Fabre \(2022\)](#).

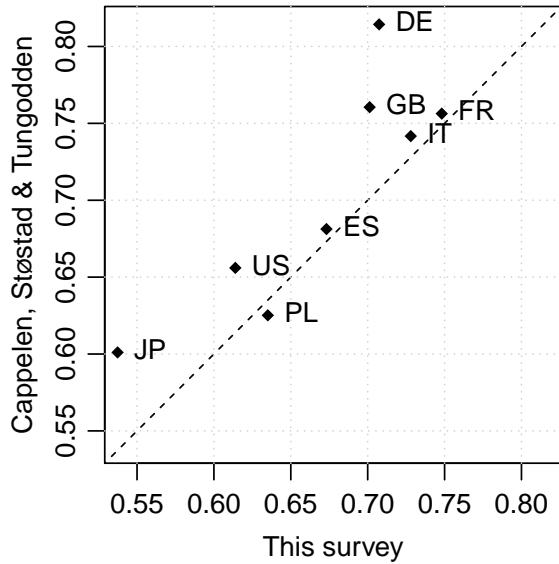

Figure S61: Additional tax schedule associated with the radical and custom redistributions. Questions 45-46, 55.

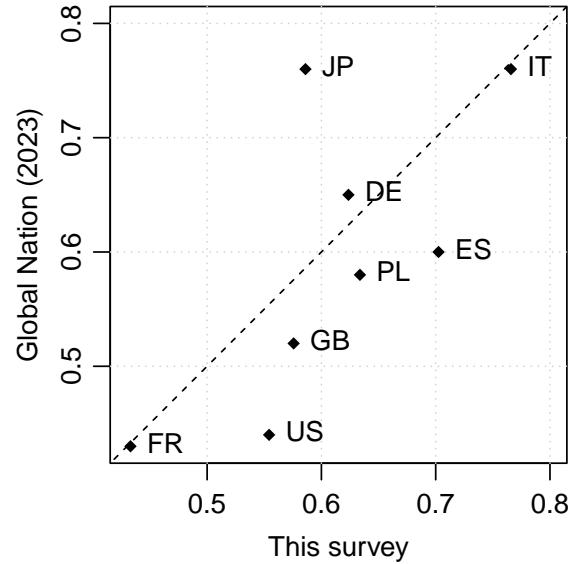

F Comparison with other surveys

Figure S62: Comparison with similar questions in other surveys.

(a) Absolute support for an international 2% tax on billionaire wealth (cross-country correlation between this survey and [Cappelen et al. \(2025\)](#): .86). (Question 38)

(b) Relative agreement that “My taxes should go towards solving global problems” (cross-country correlation with [Global Nation \(2023\)](#): .70). (Question 61)

S54 Feeling that the survey was politically biased	63
S55 Likelihood of becoming a millionaire	63
S56 Foreign origin	64
S57 Vote in the last election compared to actual results (among voters)	65
S58 Vote in the last election compared to actual results (entire population) . . .	66
S59 Variance decomposition	93
S60 Algorithm for the custom redistribution	97
S61 Tax schedule of radical and custom redistributions	99
S62 Comparison with other surveys	100
S63 [On selected demographics] Support for broad or radical global redistribution	104
S64 [On selected demographics] Relative support for plausible global policies .	104

S65	[Weighted by vote] Support for the NCS, GCS, ICS	105
S66	[Weighted by vote] Support for an int'l wealth tax depending on coverage .	105
S67	[Weighted by vote] Conjoint analysis	106
S68	[Weighted by vote] Testing warm glow	106
S69	[Weighted by vote] Relative support for plausible global policies	107
S70	[Weighted by vote] Support for broad or radical global redistribution . . .	107
S71	[Extended sample] Support for the NCS, GCS, ICS	108
S72	[Extended sample] Support for an int'l wealth tax depending on coverage .	108
S73	[Extended sample] Conjoint analysis	109
S74	[Extended sample] Testing warm glow	109
S75	[Extended sample] Relative support for plausible global policies	110
S76	[Extended sample] Support for broad or radical global redistribution . . .	110
