

A Extra Main Figures

Figure S1: Country coverage of the survey.

(Back to Section [4](#).)

Figure S3: Percentage of support for an international wealth tax with 30% of revenue funding LICs, depending on the country coverage (Yes/No question). (Questions 41-43). (Back to Section 2.2.2.)

Figure S4: “Which group of people do you advocate for when you vote?”³⁴ (Question 62). (Back to Section 2.4.2.)

Figure S5: “How do you evaluate each of these channels to transfer resources to reduce poverty in LICs?” Percentage of *Right* or *Best way* (other options: *Wrong* or *Acceptable way*). (Question 48). (Back to Section 2.4.3.)

	All	Europe	France	Germany	Italy	Poland	Spain	United Kingdom	Switzerland	Japan	Russia	Saudi Arabia	USA
Targeted cash transfers (child allowances, disability & elderly pensions)	49	48	43	46	57	45	54	44	47	36	65	73	45
Development aid agencies	37	42	42	47	39	32	44	43	44	36	23	57	37
Government, conditional on financing poverty reduction	37	40	39	43	48	33	41	37	35	27	34	62	35
Unconditional cash transfers to each household	34	30	31	27	31	30	34	27	32	24	54	62	31
Local NGOs with democratic processes	29	33	39	33	34	33	33	29	32	22	17	53	29
Local authorities	22	23	25	22	22	30	23	19	19	18	19	47	22
Government, unconditional	18	18	21	14	18	22	21	16	14	14	18	50	18

B Raw Results

B.1 Figures

Figure S6: Average synthetic indicators of support for global redistribution. (Question 38). (Back to Section 2.4.1.)

	All	Europe	Saudi Arabia	Italy	Spain	Germany	United Kingdom	Russia	France	Poland	USA	Switzerland	Japan
Latent support for global redistribution (standardized)	0.00	0.11	0.49	0.39	0.23	0.08	0.05	0.04	0.02	-0.09	-0.10	-0.11	-0.21
Share of plausible global policies supported	0.51	0.56	0.64	0.65	0.58	0.55	0.55	0.50	0.55	0.49	0.48	0.53	0.38
Share of plausible global policies opposed	0.21	0.21	0.14	0.16	0.19	0.21	0.21	0.18	0.22	0.23	0.23	0.28	0.18
Difference between share of plausible policies supported and opposed	0.30	0.36	0.50	0.49	0.39	0.34	0.34	0.31	0.33	0.25	0.25	0.24	0.20
Ratio of share of plausible policies supported over supported or opposed	0.70	0.72	0.80	0.79	0.74	0.71	0.71	0.71	0.71	0.67	0.68	0.65	0.67

Figure S14: Effect by vote at the last election on the likelihood that a political program is preferred of containing the following policy (compared to no foreign policy in the program). (See Figure 4 for the simple figure). (Question 23). (Back to Section 2.1.1.)

Figure S15: Conjoint analysis in France (Average Marginal Component Effect). Cf. Figure S24 for French. (Question 23). (Back to Section 2.3.1.)

Figure S16: Conjoint analysis in Germany (Average Marginal Component Effect). Cf. Figure S25 for German. (Question 23). (Back to Section 2.3.1.)

Figure S17: Conjoint analysis in Italy (Average Marginal Component Effect). Cf. Figure S26 for Italian. (Question 23). (Back to Section 2.3.1.)

Climate policy:

Cancel the ban on new combustion-engine cars from 2035

Double the capacity of renewable energy by 2030

Economic issues:

Increase the birth grant to up to €3,600 for newborns

Use unspent EU funds to exempt hiring companies from taxes

Introduce a legal minimum wage at 10€ per hour

Reduce working hours without reducing salaries

Foreign policy:

International tax on millionaires with 30% financing healthcare and education in low-income countries

Cut development aid

Develop a common EU defense

Social issues:

Legal limit on migration and process asylum requests outside the EU

Recognize same-sex marriage

Introduce free and mandatory early education (until 3 years old)

Tax system:

Reduce the income tax on low-income households

Replace the income tax by a 15% flat tax

Figure S18: Conjoint analysis in Poland (Average Marginal Component Effect). Cf. Figure S27 for Polish. (Question 23). (Back to Section 2.3.1.)

Climate policy:

Phase out coal by 2035

Ban the sale of new combustion-engine cars by 2035

Economic issues:

Expansion of rail production and infrastructure investment

Allocate 5% of GDP to military expenditures by 2030

Foreign policy:

International tax on millionaires with 30% financing healthcare and education in low-income countries

Cut development aid

Detention of rejected asylum seekers until they can be deported

Social issues:

Restoring abortion rights

Relax restrictions on public assembly and protest

Extended parental leave, tax benefits for children, and remote work option

Tax system:

Reduce taxes on low-income households by increasing the tax-free income allowance

Taxes on the profits of large digital corporations and fossil fuel companies

Income tax exemption for seniors delaying retirement

Figure S19: Conjoint analysis in Spain (Average Marginal Component Effect). Cf. Figure S28 for Spanish. (Question 23). (Back to Section 2.3.1.)

Climate policy:

Extend the social electricity voucher

A national investment plan to enhance water management

Economic issues:

Set the minimum wage at 1350€/month

Reduce the workweek to 36 hours by 2030 without salary cut

Promote flexible working hours through a time bank

Foreign policies:

International tax on millionaires with 30% financing healthcare and education in low-income countries

Cut development aid

Increase support for Ukraine and maintain sanctions on Russia

Social issues:

Strengthen social media regulation for transparency, misinformation control, and verified identity

Free early education (from 0 to 3 years)

Create centers outside the EU to process asylum requests

Tax system:

Lower the income tax on the middle class and increase it on rich households

Abolish the wealth tax and lower corporate tax rates

Reduce taxation in rural areas through the Agricultural Taxation Act

Figure S20: Conjoint analysis in the UK (Average Marginal Component Effect). (Question 23).
(Back to Section 2.3.1.)

Climate policy:

Investment in renewables and nuclear to achieve zero-emissions electricity in 2030

A ban on domestic flights for trips under three hours by train

Economic issues:

30 hours of free childcare per week for working parents

Healthcare plan: more appointments by utilising overtime employment, recruitment in mental care and dentistry coverage

Raising the minimum wage to £15 per hour

A 4-day working week

Foreign policy:

International tax on millionaires with 30% financing healthcare and education in low-income countries

Cut development aid

Deepen Brexit by removing or reforming EU-inherited laws

Social issues:

Legal limit on migration and deportation to Rwanda

Enforce neighbourhood policing through recruitment and new equipment

Increase the Universal Credit for low-income households

Tax system:

Fight tax avoidance by abolishing the non-domiciled tax status

Abolish the inheritance tax for estates under £2 million

Abolish business rates

Figure S21: Conjoint analysis in Switzerland (Average Marginal Component Effect).
(Question 23). (Back to Section 2.3.1.)

Figure S22: Conjoint analysis in Japan (Average Marginal Component Effect). (Question 23). (Back to Section 2.3.1.)

Figure S23: Conjoint analysis in the U.S. (Average Marginal Component Effect). (Question 23). (Back to Section 2.3.1.)

Figure S24: Conjoint analysis in France (in French, cf. Figure S15 for English). (Question 23). (Back to Section 2.3.1.)

Figure S25: Conjoint analysis in Germany (in German, cf. Figure S16 for English). (Question 23). (Back to Section 2.3.1.)

Figure S26: Conjoint analysis in Italy (in Italian, cf. Figure S17 for English). (Question 23).
(Back to Section 2.3.1.)

Politica climatica:

Annullare il divieto di nuove auto con motore a combustione a partire dal 2035

Raddoppiare la capacità di energia rinnovabile entro il 2030

Politica economica:

Incrementare l'assegno di nascita fino a 3.600 euro per i neonati

Destinare i fondi UE non utilizzati all'esenzione fiscale per le aziende che assumono

Introdurre un salario minimo a norma di legge di 10€ all'ora

Riduzione dell'orario di lavoro senza ridurre gli stipendi

Politica estera:

Tassa internazionale sui milionari, il cui 30% finanzierebbe l'assistenza sanitaria e l'istruzione nei Paesi a basso reddito

Tagliare gli aiuti allo sviluppo

Sviluppare una difesa militare comune europea

Politica sociale:

Imporre un limite legale della migrazione in Italia e trattare le richieste di asilo al di fuori dell'UE

Riconoscere il matrimonio tra persone dello stesso sesso

Introdurre l'istruzione in età della prima infanzia gratuita e obbligatoria (fino ai 3 anni)

Politica fiscale:

Riduzione dell'imposta sul reddito per i nuclei familiari a basso reddito

Sostituire l'imposta sul reddito con una flat tax del 15%.

Figure S27: Conjoint analysis in Poland (in Polish, cf. Figure S18 for English). (Question 23). (Back to Section 2.3.1.)

Polityka klimatyczna:

Rezygnacja z węgla do 2035 r.

Zakaz sprzedaży nowych samochodów z silnikiem spalinowym do 2035 r.

Kwestie ekonomiczne:

Rozwój produkcji kolejowej i inwestycje w infrastrukturę

Przeznaczenie 5% PKB na wydatki wojskowe do 2030 r.

Polityka zagraniczna:

Międzynarodowy podatek od milionerów, z 30% finansowaniem opieki zdrowotnej i edukacji w krajach o niskich dochodach

Ograniczenie pomocy rozwojowej

Zatrzymanie osób, którym odmówiono azylu, do czasu ich deportacji

Kwestie społeczne:

Przywrócenie praw reprodukcyjnych, w tym prawa do aborcji

Złagodzenie restrykcji w zakresie zgromadzeń publicznych i protestów

Wydłużony urlop rodzicielski, ulgi podatkowe na dzieci i możliwość pracy zdalnej

System podatkowy:

Obniżenie podatków dla gospodarstw domowych o niskich dochodach poprzez zwiększenie kwoty wolnej od podatku

Zwiększenie podatków od zysków dużych korporacji cyfrowych oraz firm zajmujących się paliwami kopalnymi

Zwolnienie z podatku dochodowego dla seniorów opóźniających przejście na emeryturę

Figure S28: Conjoint analysis in Spain (in Spanish, cf. Figure S19 for English). (Question 23). (Back to Section 2.3.1.)

Figure S29: Conjoint analysis in Japan (in Japanese, cf. Figure S22 for English). (Question 23). (Back to Section 2.3.1.)

Figure S30: Average preferred revenue split for a global wealth tax (variant *few*). (Question 24).
(Back to Section 2.1.2.)

- Global: Education, Healthcare and Renewable energy in low-income countries
- Domestic: Reduction of the deficit
- Domestic: Reduction in the income tax
- Domestic: Social welfare programs
- Domestic: Education and Healthcare
- ◆ Share allocating at least 5% to Global

Figure S31: Decomposition of preferred shares for each spending item in the revenue split
(All countries together; variant *few*). (Question 24). (Back to Section 2.1.2.)

Figure S32: Decomposition of preferred shares for each spending item in the revenue split (All countries together; variant *many*). (Question 25). (Back to Section 2.1.2.)

Figure S33: Average preferred revenue split for a global wealth tax (variant *many*). (Question 25). (Back to Section 2.1.2.)

	All	Europe	France	Germany	Italy	Poland	Spain	United Kingdom	Switzerland	Japan	Saudi Arabia	USA

Figure S34: “By taking this survey, you will be automatically entered into a lottery to win up to [amount_lottery: \$100].

Should you be selected in the lottery, you will have the option to channel a part of this additional compensation to the charity *Just One Tree* to plant trees.

In case you win the lottery, what share of the [amount_lottery: \$100 prize] would you donate to plant trees?” (Question 27).

Figure S35: Support for the National, Global, and International Climate Schemes, and median belief regarding the support for the GCS. (Questions 26-35). (Back to Section 2.2.1.)

	All	Europe	France	Germany	Italy	Poland	Spain	United Kingdom	Switzerland	Japan	Russia	Saudi Arabia	USA
Supports the National Climate Scheme	68	66	63	63	74	56	69	70	58	68	74	88	64
Supports the Global Climate Scheme (GCS)	55	61	65	53	78	51	68	58	62	57	49	85	49
Belief about GCS support in own country	39	40	40	35	40	35	40	42	45	33	30	58	40
Belief about GCS support in the U.S. (except for the U.S.: support in the EU)	30	21	20	19	24	29	23	21	20	30	NA	46	40
Supports the GCS if its other members* cover 25–33% of world emissions *Low: Global South + EU	65	69	75	63	85	60	71	64	62	67	57	87	60
Supports the GCS if its other members* cover 56% of world emissions *Mid: Global South + China	67	73	76	72	83	54	78	67	64	67	63	87	59
Supports the GCS if its other members* cover 64–72% of world emissions *High: Global South + China + EU + various HICs (UK, Japan, South Korea, Canada...)	68	73	76	77	79	71	74	63	74	71	60	91	64
Supports the GCS if its other members* cover 64–72% of world emissions *High color: High + Distributive effects displayed using colors on world map	62	68	61	68	79	57	77	66	65	63	54	88	56
Inflation due to the GCS (in %)	2	1	1	2	1	2	1	1	1	2	2	3	2
Net monetary cost of the GCS (in \$/month)	52	27	17	48	18	39	13	24	14	48	30	101	88

Figure S36: “According to you, how likely is it that international policies involving significant transfers from high-income countries to low-income countries will be introduced in the next 15 years?” (Question 37).

Figure S37: Absolute support for plausible global redistribution policies (Percentage of *Somewhat* or *Strongly* support). See Figure 6 for the relative support. (Question 38).

	All	Europe	France	Germany	Italy	Poland	Spain	United Kingdom	Switzerland	Japan	Russia	Saudi Arabia	USA
Minimum tax of 2% on billionaires' wealth, in voluntary countries	63	70	75	71	73	63	66	70	64	54	57	67	61
Bridgetown initiative: MDBs expanding sustainable investments in LICs, and at lower interest rates	56	60	56	61	72	47	57	63	61	45	58	70	54
L&D: Developed countries financing a fund to help vulnerable countries cope with climate Loss and damage	55	58	55	55	68	55	61	56	52	44	61	75	52
Debt relief for vulnerable countries, suspending payments until they are more able to repay	49	52	48	44	64	53	55	54	52	38	52	70	48
At least 0.7% of developed countries' GDP in foreign aid	49	51	50	48	59	42	58	50	51	33	59	69	47
Raise global minimum tax on profit from 15% to 35%, allocating revenues to countries based on sales	49	58	58	57	70	47	50	58	51	42	35	53	46
NCQG: Developing countries providing \$300 bn a year in climate finance for developing countries	48	53	51	54	62	46	54	52	53	32	60	67	44
International levy on shipping carbon emissions, returned to countries based on population	47	54	59	49	62	45	54	53	56	30	46	60	46
Expand Security Council to new permanent members (e.g. India, Brazil, African Union), restrict veto use	46	56	54	54	64	50	55	55	54	35	35	63	44
International levy on aviation carbon emissions, raising prices by 30%, returned to countries based on population	37	43	47	42	45	39	42	41	42	26	34	53	36

Figure S38: Share of plausible global redistribution policies supported (*somewhat* or *strongly*). (Question 38). Section 2.4.1.

Figure S39: Share of plausible global redistribution policies opposed (*somewhat* or *strongly*). (Question 38). Section 2.4.1.

Figure S40: Preferred North-to-South climate grant funding in 2035, specified in qualitative terms or in terms of who advocates for that amount (NCQG, variant *Short*). (Question 40). (Back to Section 2.4.1.)

Figure S41: Preferred North-to-South climate grant funding in 2035, specified in money terms (NCQG, variant *Full*). (Question 39). (Back to Section 2.4.1.)

Figure S42: Support for an international wealth tax with 30% of revenue funding LICs, depending on the country coverage (*Yes/No* question). (Questions 41-43).

	All	Europe	France	Germany	Italy	Poland	Spain	United Kingdom	Switzerland	Japan	Russia	Saudi Arabia	USA
Global: implemented by all other countries	74	78	81	78	85	79	73	71	70	72	77	84	67
High-income: implemented by all other HICs and not by some MICs (such as China)	69	71	72	73	81	66	68	70	56	66	69	84	67
International: implemented by some (e.g. EU, UK, Brazil) and not by others (e.g. U.S., China)	68	72	73	70	82	57	77	68	61	61	74	83	64

Figure S43: Prefers a *sustainable* rather than a *business-as-usual* future. (Question 44).

Figure S44: Acceptance of a global progressive income tax on the richest households to finance global poverty reduction (Questions 45-46, Percentage of *Somewhat* or *Strongly* support among non-*Indifferent* responses), and features of the tax presented to the respondents (Section D.2). (Back to Section 2.4.2.)

	All	Europe	France	Germany	Italy	Poland	Spain	United Kingdom	Switzerland	Japan	Russia	Saudi Arabia	USA
Accepts tax on world top 1% to finance global poverty reduction (Additional 15% tax on income over [\$120k/year in PPP])	69	73	71	72	84	69	73	67	60	69	75	82	62

1120 B.2 Countries' slant in the open-ended fields

Reading and coding each field one by one took about 30 hours. It gives first-hand insight on the topics vary significantly across countries. Here are what I noted as each country's unique topics. Compared to other countries, the concepts overrepresented in each country are as follows:

- 1125 • France: insecurity, holidays or free time, the public deficit, equality, gender equality;
- Germany: old age poverty, immigration, the return of growth or the economic situation, free time, war (in Europe), bureaucracy;
- Italy: health, serenity or peace of mind, war, work stress and free time, world hunger, femicides;
- 1130 • Poland: war, inequality, holidays, honesty, disabled people;
- Spain: "health, money and love", housing, corruption, water access, global poverty, squatters;
- the UK: the cost of living, immigration, having a comfortable life, mental health, the Holocaust, roads dangerous for driving, being unjustly imprisoned, cut to the winter fuel allowance;
- 1135 • Switzerland: equality, immigration, gender equality;
- Japan: the level of pensions, a cut on the consumption tax, the price of rice, the declining birth rate, childcare support, reducing the number of parliament members, foreigners' preferential treatment, excessive social assistance or the lack of reward for hard work, stock prices;
- 1140 • Russia: metaphysical questions or profound interrogations, "lies", buying a house or a car, traveling, the desire to live;
- Saudi Arabia: hobbies such as sports or soccer, the willingness to become millionaire (or billionaire), one's business project,⁴⁷ buying a house, one's car, satisfaction with one's income, "self-injustice" or sin, raising children, Palestine, the oppression of orphans, travel;
- 1145 • the U.S.: the economy, Trump, breaches of the Constitution, abortion, gun control.

⁴⁷This can be linked to the high risk-taking disposition of Saudis (1).

C Questionnaire

The U.S. version of the questionnaire is presented. Features that vary across countries are placed in square brackets within the question text, as follows: [feature_name: U.S. value]. The features values for each country are provided in [anonymized for review]. Random branches or conditions for displaying the question are specified in square brackets before the question text (cf. Figure 9 for the survey flow). The question text is followed by square brackets that refer to Sections, Figures, and Tables presenting the question results, and the variable name(s) corresponding to the question. Finally, response options are displayed in italics. Unless otherwise specified, responses are compulsory and a single response much be chosen. (Back to Section 4.)

Welcome

1. Welcome to this survey!

This survey is **anonymous** and is conducted **for research** purposes on a representative sample of [sample_size: 3,000] [nationality: American people].

It takes around 20 min to complete.

The survey contains lotteries and awards for those who get the correct answer to some comprehension questions.

If you are attentive and lucky, **you can win up to [amount_lottery: \$100]**.

Please answer every question carefully.

By clicking on the button below, you consent to the terms and conditions.

Socio-demographics

2. What is your gender? [gender]

Woman; Man; Other

3. What is your country? [hidden_country]

4. What is your age? [age_exact, age]

Below 18; 18 to 20; 21 to 24; 25 to 29; 30 to 34; 35 to 39; 40 to 44; 45 to 49; 50 to 54; 55 to 59; 60 to 64; 65 to 69; 70 to 74; 75 to 79; 80 to 84; 85 to 89; 90 to 99; 100 or above

5. Were you or your parents born in a foreign country? [Figure S70; foreign]

Yes, I was born in a foreign country; Not me but both my parents were born in a foreign country; Not me but one of my parents was born in a foreign country; No, I was born in this country and my parents too

6. Do you live with your partner (if you have one)? [couple]

Yes; No

7. How many people are there in your household?

The household includes: **you**, your spouse, **your family members** who live with you, and your dependents (not flatmates). [hh_size]

1; 2; 3; 4; 5 or more

8. How many children under the age of 14 live with you? [Nb_children__14]

0; 1; 2; 3; 4 or more

9. [new page] [Only in: US] What race or ethnicity do you identify with? (Multiple answers are possible) [race]

White; Black or African American; Hispanic; Asian; American Indian or Alaskan Native; Native Hawaiian or Pacific Islander; Other; Prefer not to say

10. What is the [periodicity_text: monthly] [income_type: gross] income of your household, [income_type_long: after taxes and transfers]?

This includes all sources of income: wages, pensions, welfare payments, property income, dividends, self-employment earnings, Social Security benefits, and income from other sources. [income]

[All but RU, US: Custom thresholds, taking into account household composition Questions 6-8, and corresponding to the country's deciles and quartiles of standard of living, cf. the sheet "Income" in [anonymized for review];

RU, US: Items based on household total income deciles and quartiles, namely in US: *Less than \$17,000; between \$17,001 and \$30,000; between \$30,001 and \$36,000; between \$36,001 and \$43,000; between \$43,001 and \$56,000; between \$56,001 and \$72,000; between \$72,001 and \$91,000; between \$91,001 and \$115,000; between \$115,001 and \$130,000;*

between \$130,001 and \$150,000; between \$150,001 and \$213,000; More than \$213,000; I prefer not to answer]

11. What is your highest completed education level? [education]

1210

[Country-specific, usually: 0-1 Primary or less; 2 Medium school; 2 Some high school; 3 High school diploma; 3-4 Vocational training; 5 Short-cycle tertiary; 6 Bachelor's; 7-8 Master's or higher]

12. What is your employment status? [employment_status]

1215

Full-time employed; Part-time employed; Self-employed; Unemployed (searching for a job); Student; Retired; Inactive (not searching for a job)

13. [Only the first digits asked in RU, SA] What is your zipcode?

We ask for the zipcode to balance the sample in terms of degree of urbanization (rural, town or city). The survey will be terminated if your zipcode is not recognized. [zipcode]

1220

14. Are you a homeowner or a tenant? (Multiple answers are possible) [home_owner]

Tenant; Owner; Landlord renting out property; Hosted free of charge

15. [new page] How likely are you to become a millionaire at some point in your life?

[Figure S69; millionaire]

Very unlikely; Unlikely; Likely; Very likely; I am already a millionaire

1225

16. [Except in: RU, SA] Did you vote in the [election: 2024 presidential election]? [Figure S71; voted]

Yes; No; Prefer not to say; I didn't have the right to vote in [country_name: the United States].

Vote

1230

17. [Only in: SA] What is your nationality?

If you have both the Saudi and a foreign nationality, choose "Saudi". [nationality_SA]
Saudi; India; Bangladesh; Syria; Yemen; Egypt; Pakistan; Indonesia; Philippines; Sudan; Myanmar; Jordan; Sri Lanka; Nepal; Turkey; Somalia; Lebanon; Other

1235

18. [Except in: RU, SA] [If voted: Which candidate did you vote for in the [election: 2024 presidential election]?; Otherwise: Even if you did not vote in the [election: 2024

presidential election], please indicate the candidate that you were most likely to have voted for or who represents your views more closely.] [Figure S71; vote]
[Candidates/parties with at least 1% of votes, e.g. in US: Harris; Trump; Other; Prefer not to say. In FR, IT, PL, ES, election is the 2024 European election]

1240 **Open-ended field**

[Four random branches; Section 2.1.1; Figures S2, S7-S12; Random answers can be found on [anonymized for review]; field, variant_field]

- 19. [Branch: concerns] What are your main concerns these days? [Figure S10; concerns_field]
- 20. [Branch: wish] What are your needs or wishes? [Figure S11; wish_field]
- 1245 21. [Branch: injustice] What according to you is the greatest injustice of all? [Figure S12; injustice_field]
- 22. [Branch: issue] Can you name an issue that is important to you but is neglected in the public debate? [Figure S13; issue_field]

Conjoint analysis

- 1250 23. [Except in: RU, SA] Imagine if the two top candidates in your constituency in the next general election campaigned with the following policies in their party’s plat-forms.

Which of these candidates would you vote for?

1255

Candidate A	Candidate B	
[Random policy]	[Random policy]	[Policy field in random order]
[Random policy]	[Random policy]	[Policy field in random order]
[Random policy]	[Random policy]	[Policy field in random order]
[Random policy]	[Random policy]	[Policy field in random order]
[Random policy]	[Random policy]	[Policy field in random order]

[Section 2.3.1; Figures 4, S14-S28; conjoint]
Candidate A; Candidate B; Neither of them

Revenue split of global tax

[Two random branches; field, variant_split]

24. [Branch: Few] Imagine a wealth tax applied to households with a net worth above [tax_threshold: \$5 million], implemented in every country around the world.

[tax_country_name: In the U.S.], the tax revenues collected would be [tax_revenue: \$514 billion] per year (that is, [tax_revenue_gdp: 2]% of [tax_country_gdp: U.S. GDP]), while it would be [LIC_revenue: \$1 billion] in all low-income countries combined (700 million people live in a low-income country, most of them in Africa). Each country would retain part of the revenues it collects and use it for different domestic purposes. The remaining part would be pooled globally to finance sustainable development in low-income countries.

What percentage of the global wealth tax revenue should be allocated to each category?

The total allocation must sum to 100%.

[Section 2.1.2; Figures 1, S30-S31; revenue_split_few]

Domestic: Education and Healthcare; Domestic: Social welfare programs; Domestic: Reduction in the federal income tax; Domestic: Reduction of the deficit; Global: Education, Healthcare and Renewable energy in low-income countries

25. [Branch: Many] Imagine a wealth tax applied to households with net worth above [tax_threshold: \$5 million], implemented in all countries around the world.

[tax_country_name: In the U.S.], the tax revenues collected would be [tax_revenue: \$514 billion] per year (that is, [tax_revenue_gdp: 2]% of [tax_country_gdp: U.S. GDP]), while it would be [LIC_revenue: \$1 billion] in all low-income countries combined (700 million people live in a low-income country, most of them in Africa). Each country would retain part of the revenues it collects and use it for different domestic purposes. The remaining part would be pooled globally to finance sustainable development.

What percentage of the global wealth tax revenue should be allocated to each

category?

The total allocation must sum to 100%.

1295

[Section 2.1.2; Figures 1, S32-S33; revenue_split_many]

1300

[Five items are chosen at random among the 13 possible ones: *Domestic: Education and Research; Domestic: Healthcare; Domestic: Defense; Domestic: Deficit reduction; Domestic: Justice and Police; Domestic: Retirement pensions; Domestic: Social welfare programs; Domestic: Infrastructure (public transport, water systems...); Domestic: Income tax reduction; Global: Education and Healthcare in low-income countries; Global: Renewable energy and infrastructure to cope with climate change; Global: Loss and Damage Fund (to rebuild after climate disasters); Global: Forestation and biodiversity projects*]

Warm glow – moral substitute

1305

[Three random branches: NCS; Donation; control group; variant_warm_glow]

26. [Branch: NCS] Do you agree with the following policy?

Climate Scheme:

1310

To meet the national climate target, a limited number of permits to emit greenhouse gases would be issued nationally. Polluting firms would be required to buy permits to cover their greenhouse gas emissions. Such a policy would make fossil fuel companies pay for their emissions and gradually raise the price of fossil fuels. Higher prices would encourage people and companies to use less fossil fuels, reducing greenhouse gas emissions.

1315

The revenues generated by the sale of permits would finance an equal cash transfer. Each [country_adjective: American] would receive [amount_expenses: \$115] per month, thereby offsetting price increases for the average [country_adjective: American].

Do you support the Climate Scheme? [Section 2.2.1; Figures 3, S35; ncs_support]

1320

Yes; No

27. [Branch: Donation] By taking this survey, you will be automatically entered into a lottery to win up to [amount_lottery: \$100].

Should you be selected in the lottery, you will have the option to channel a part of this additional compensation to the charity *Just One Tree* to plant trees.

1325

In case you win the lottery, what share of the [amount_lottery: \$100 prize] would you donate to plant trees? [Section 2.3.2; Figures 5a, S34 ; donation]

Share to plant trees

Cap & Share

1330

28. Do you support the following policy?

To ensure that you have attentively read the description, we will ask some comprehension questions later in the survey: those who get correct answers can win [amount_lottery: \$100].

Global Climate Scheme:

1335

In 2015, all countries agreed to contain global warming "well below +2 °C". To achieve this, there is a maximum amount of greenhouse gases we can emit globally.

1340

To meet the climate target, a limited number of permits to emit greenhouse gases would be issued globally. Polluting firms would be required to buy permits to cover their greenhouse gas emissions. Such a policy would make fossil fuel companies pay for their emissions and gradually raise the price of fossil fuels. Higher prices would encourage people and companies to use less fossil fuels, reducing greenhouse gas emissions.

1345

In accordance with the principle that each human has an equal right to pollute, the revenues generated by the sale of permits could finance a global basic income. Every adult would receive [amount_bi: \$35]per month, thereby lifting 600 million people who earn less than \$2 a day out of extreme poverty.

1350

The typical [national: American] would lose out financially [amount_lost: \$90]per month (as he or she would face around [price_increase: 2]% in price increases, which is higher than the [amount_bi: \$35]per month they would receive).

1355

The policy could be implemented as soon as 100 countries agree to it. Countries that would refuse to take part in the policy could face sanctions (like tariffs) from the rest of the world and would be excluded from the basic income program.

Do you support the Global Climate Scheme? [Section 2.2.1; Figures 3, 5a, S35;

gcs_support]

Yes; No

[new page] [Two random branches: own; US; Figure S35; gcs_belief, variant_belief]

29. [Branch: US] According to you, **what percentage of [belief_nationality: All but US: Americans; US: Europeans] would answer Yes to the previous question** (considering that typical [belief_nationality] would lose [belief_loss: \$140] per month from the Global Climate Scheme)?

The respondent who is closest to the correct value will get [amount_lottery: \$100].

Percentage of [belief_nationality] in favor of Global Climate Scheme

30. [Branch: own] According to you, **what percentage of [nationality: fellow citizens] would answer Yes to the previous question?**

The respondent who is closest to the correct value will get [amount_lottery: \$100].

Percentage of [nationality: fellow citizens] in favor of Global Climate Scheme

Cap & Share non-universal

[Four random branches: low; mid; high; high_color; Section 2.2.1; Figures 3, S35; ics_support]

31. [Branch: low] Below is a map showing a possible set of countries that would participate in the Global Climate Scheme previously described.

These countries include India, the European Union, as well as all Africa, Latin America, South-Asia and South-East Asia.

Collectively, these [nb_countries_low: 145] countries account for [emissions_low_without: 40]% of global emissions (if [ics_country: the U.S.] joined them, [emissions_low_with: 40]% of global emissions would be covered).

32. [Branch: mid] Below is a map showing a possible set of countries that would participate in the Global Climate Scheme previously described.

These countries include China, India, as well as all Africa, Latin America, South-Asia and South-East Asia.

Collectively, these 119 countries account for 56% of global emissions (if [ics_country: the U.S.] joined them, [emissions_mid_with: 70]% of global emissions would be covered).

33. [Branch: high] Below is a map showing a possible set of countries that would participate in the Global Climate Scheme previously described.

These countries include China, India, [text_countries_high: the European Union, Japan, the United Kingdom], Canada, South Korea, as well as all Africa, Latin America, South-Asia and South-East Asia.

Collectively, these [nb_countries_high: 153] countries account for [emissions_high_without: 71]% of global emissions (if [ics_country: the U.S.] joined them, [emissions_high_with: 86]% of global emissions would be covered).

34. [Branch: high_color] Below is a map showing a possible set of countries that would participate in the Global Climate Scheme previously described.

These countries include China, India, [text_countries_high: the European Union, Japan, the United Kingdom], Canada, South Korea, as well as all Africa, Latin America, South-Asia and South-East Asia.

Collectively, these [nb_countries_high: 153] countries account for [emissions_high_without: 72]% of global emissions (if [ics_country: the U.S.] joined them, [emissions_high_with: 86]% of global emissions would be covered).

Note that a provision would prevent the Global Climate Scheme from harming low- and middle-income countries: this is why countries like China, Mexico, or Egypt are in white on the map (they would neither win nor lose financially).

35. Do you support [ics_country: the U.S.] joining the Global Climate Scheme, in case it

is adopted by the above countries? [Section 2.2.1; Figures 3, S35; ics_support]
Yes; No

Warm glow – realism

1425 36. [Two random branches: with or without this informational text.] To ensure that you have attentively read the description below, we will ask some comprehension questions later in the survey: those who get correct answers can win \$100.

1430 In several international organizations, **countries have agreed to demonstrate some degree of solidarity in addressing global challenges.**
Negotiations are ongoing to implement specific mechanisms for sustainable development.

1435 Here are a few examples:

 In 2025, to reduce carbon emissions from shipping, **the International Maritime Organization adopted an international levy on excess emissions from maritime fuel, that should partly finance low-income countries.**

 Since 1970, **developed countries have agreed to contribute 0.7% of their GDP in foreign aid** and development assistance.

1440  In international climate negotiations, **developed countries have committed to finance climate action in developing countries.** In 2009, they committed to provide \$100 billion per year by 2020. In 2023, all countries agreed to set up a fund to help vulnerable countries cope with loss and damage from climate change. In 2024, the \$100 billion goal was increased to \$300 billion per year by 2035.

1445  In 2021, 136 countries adopted a minimum tax rate of 15% on multinational profits.

 In 2024, under the leadership of Brazil, **the G20 considered the introduction of a global tax of 2% on the wealth of billionaires.**

1450  In 2024, the UN General Assembly adopted the Pact for the Future, which foresees a reform of the UN Security Council to limit the power of its five permanent member and expand it to new members.

 Led by the Prime Minister of Barbados and supported by the UN Secretary Gen-

1455 eral, the Bridgetown initiative seeks a new financial system that would drive financial resources towards climate action and sustainable development. [Section 2.3.2; Figure 5b; info_solidarity]

37. According to you, how likely is it that international policies involving significant transfers from high-income countries to low-income countries will be introduced in the next 15 years? [Section 2.3.2; Figures 5b, S36; likely_solidarity]

1460 *Very unlikely; Unlikely; Likely; Very likely*

38. Do you support or oppose the following policies?

[Only in PL, SA: (As some items refer to “developed countries”, note that we consider [Saudi Arabia] to be a developed country in this question.)) [Section 2.4.1; Figures 6, S37-S39; solidarity_support]

1465 [Item order is randomized]

- Institutions like the World Bank investing in many more sustainable projects in lower-income countries, and offering lower interest rates (the Bridgetown initiative)
- 1470 • Developed countries financing a fund to help vulnerable countries cope with loss and damage from climate change
- Expanding the UN Security Council (in charge of peacekeeping) to new permanent members such as India, Brazil, and the African Union, and restricting the use of the veto⁴⁸
- 1475 • Raising the globally agreed minimum tax rate on profits of multinational firms from 15% to 35%, closing loopholes and allocating revenues to countries where sales are made
- Debt relief for vulnerable countries by suspending repayments until they are better able to repay, promoting their development
- 1480 • An international levy on carbon emissions from shipping, funding national budgets in proportion to population
- An international levy on carbon emissions from aviation, raising ticket prices by 30% and funding national budgets in proportion to population

⁴⁸In Russia, due to a mistake in the questionnaire, this item was not asked to the control group. Therefore, results are based on the treated group for this item in Russia.

1485

- Developed countries providing \$300 billion a year (0.4% of their GDP) to finance climate action in developing countries
- Developed countries contributing at least 0.7% of their GDP in foreign aid and development assistance
- A minimum tax of 2% on the wealth of billionaires, in voluntary countries

Strongly oppose; Somewhat oppose; Indifferent; Somewhat support; Strongly support

1490

NCQG

[Two random branches: Full; Short; ncqg_fusion, variant_ncqg]

1495

39. [Branch: Full] **At international climate negotiations, developing countries call for larger provision of "climate finance": the financing of climate action from developed countries in developing countries.** [developed_note: (Note that we consider Saudi Arabia to be a developed country in this question.)]

There are two kinds of climate finance: grants (that is, donations) and loans. In 2022, \$26 billion was provided as grants and the rest as loans, for a total of \$116 billion.

1500

In 2009, developed countries agreed to mobilize \$100 billion per year in climate finance by 2020. In 2024, they committed to raise this goal to \$300 billion by 2035. None of the goals specify which share should be provided as grants.

1505

Below are different positions on the amount of climate finance that should be provided in 2035, all expressed in grant-equivalent terms (that is, not counting loans):

1510

- \$0: There should be no contributions from developed countries to climate action in developing countries.
- \$26 billion (0.04% of developed countries' GDP): The current amount, consistent with the old (2020) goal.
- \$100 billion (0.14% of GDP): The old (2020) goal, if all climate finance were provided as grants.
- \$300 billion (0.43% of GDP): The new (2035) goal, if all climate finance were provided as grants.

1515

- \$600 billion (0.86% of GDP): The goal called for by India, a position shared by most developing countries.

- \$1,000 billion (1.43% of GDP): The goal called for by Climate Action Network (a network of NGOs including Greenpeace, Oxfam, and WWF).

1520

- \$5,000 billion (7.14% of GDP): The goal called for by Demand Climate Justice (a network of NGOs including 350.org and the World Council of Churches)

If you could choose the amount of climate finance provided by developed countries to developing countries in 2035, what amount would you choose (in grant-equivalent terms)?

1525

[Section 2.4.1; Figure S41; ncqg_full]

[Item order is randomly reversed or not]

\$0; \$26 billion; \$100 billion; \$300 billion; \$600 billion; \$1,000 billion; \$5,000 billion

40. [Branch: Short] **"Climate finance" designates the financing of climate action from developed countries in developing countries.** [developed_note: (Note that we consider Saudi Arabia to be a developed country in this question.)]

1530

There are two kinds of climate finance: grants (that is, donations) and loans. The large majority is currently provided as loans.

1535

In 2009, developed countries agreed to mobilize \$100 billion per year in climate finance. In 2024, they committed to triple this goal by 2035. None of the goals specify which share should be provided as grants.

At international climate negotiations, developing countries call for larger provision of climate finance, particularly in the form of grants.

1540

If you could choose the level of climate finance provided by developed countries to developing countries in 2035, what would you choose?

[Section 2.4.1; Figure S40; ncqg]

[Item order is randomly flipped or not]

1545

Stop all provision of climate finance.;

Reduce the provision of climate finance.;

Maintain current contributions (\$26 billion per year in grants, that is 0.04% of developed countries' GDP, and \$80 billion in loans, or 0.1% of GDP).;

1550 *Meet the newly agreed goal by tripling grants and loans (\$100 billion in grants, or 0.15% of GDP).;*

Increase climate finance to a level between what developed countries have agreed and what developing countries are asking for (\$300 billion in grants, or 0.45% of GDP).;

Increase climate finance to match what developing countries are asking for (\$600 billion in grants, or 0.9% of GDP).;

1555 *Increase climate finance to match what NGOs are asking for (at least \$1,000 billion per year in grants, that is 1.4% of GDP, is what Greenpeace, Oxfam, WWF, and the World Council of Churches ask for).*

Wealth tax depending on sets of countries

[Three random branches: Global; HIC; Int'l; Section 2.2.2; Figures S3, S42; wealth_tax_support]

- 1560 41. [Branch: Global] **Imagine an international tax on individuals with net worth above [wealth_threshold: \$1 million].**

Only wealth above [wealth_threshold: \$1 million] would be taxed, at a rate of 2%. Each country would retain 70% of the revenues it collects, while 30% would be pooled at the global level to finance public services in low-income countries (in particular, access to drinking water, healthcare, and education in Africa).

1565

Say we are in 2030. **Imagine that all other countries in the world adopt this policy. Do you support [country_name: the United States] adopting this international tax on millionaires?**

1570 *Yes; No*

42. [Branch: HIC] **Imagine an international tax on individuals with net worth above [wealth_threshold: \$1 million].**

Only wealth above [wealth_threshold: \$1 million] would be taxed, at a rate of 2%. Each country would retain 70% of the revenues it collects, while 30% would be pooled at the global level to finance public services in low-income countries (in particular, access to drinking water, healthcare, and education in Africa).

1575

Say we are in 2030. [hic_tax: **Imagine that all other high-income countries (such as the European Union, Japan, and Canada) adopt this policy and some middle-income countries (such as China) do not.**]

1580

Do you support [country_name: the United States] adopting this international tax on millionaires?

Yes; No

43. [Branch: Int'l] **Imagine an international tax on individuals with net worth above [wealth_threshold: \$1 million].**

Only wealth above [wealth_threshold: \$1 million] would be taxed, at a rate of 2%. Each country would retain 70% of the revenues it collects, while 30% would be pooled at the global level to finance public services in low-income countries (in particular, access to drinking water, healthcare, and education in Africa).

Say we are in 2030. [intl_tax:⁴⁹ **Imagine that some countries (such as the European Union) adopt this policy and others (such as Japan, Canada, and China) do not.**]

Do you support [country_name: the United States] adopting this international tax on millionaires?

Yes; No

Scenarios & radical tax

[Scenario A & B are randomly interverted.]

44. **Consider two possible scenarios for the world for the next 20 years.**

Scenario A:

Most countries implement coordinated policies to limit global warming to +2°C and reduce inequality. The world greatly reduces greenhouse gas emissions and is on track to meet its climate target. Taxes on millionaires fund the installation of heat pumps, the thermal insulation of buildings, and improved public transportation. Yachts and private jets are phased out worldwide. Cars are all electric by 2045, and they are about the same price as internal combustion cars nowadays. By 2045, environmental regulations gradually double the price heating fuel or gas, air travel, and beef. As a result, people fly half as much, eat half as much meat, and use more pub-

⁴⁹Excluded countries are *China, Japan, and Canada*. As for included countries, on top of *Brazil*, they are: *the EU and the UK* for Switzerland, Saudi Arabia, and the U.S.; *the EU* for Russia and the UK; and *France, Germany, Spain, and the UK (except one's own country)* for EU countries.

1610 lic transportation in 2045 than they did in 2025. Despite higher prices for polluting goods, the overall purchasing power is preserved, thanks to a decrease in sales tax that reduces the prices of non-polluting goods.

Scenario B:

1615 Since 2025, no additional policies are implemented to address climate change or inequality. People maintain the same lifestyles as in 2025. For example, most people continue to drive cars with internal combustion engines. Greenhouse gas emissions are stable. Global warming is expected to reach +3°C by 2100 and higher levels beyond that date. A warmer climate will cause more frequent and more severe
1620 droughts, heatwaves, wildfires, and floodings.

Apart from the elements described, the two scenarios are the same (for example, in terms of unemployment or crime).

1625 **Which scenario do you prefer for the future?** [Section 2.4.2; Figures 7, S43; sustainable_future] Scenario A; Scenario B

[new page] [Two random branches: top1; top3; Section 2.4.2; Figures 7, S44-S45; top_tax_support, variant_top_tax]

1630 45. [Branch: top1] Currently, 2 billion people live in acute poverty, with less than [lcu_250: \$250][periodicity: per month].

The Sustainable Development Goals, adopted by all countries in 2015, aim to alleviate poverty and give access to healthcare, education, drinking water, and sanitation for all by 2030. Due to lack of funding, the world is not on track to meet these
1635 poverty reduction goals.

Poverty reduction could be funded by a global tax on individual income above [lcu_120k: \$120,000][periodicity_tax: per year].

The tax rate would be 15% for every [currency: dollar] over [lcu_120k: \$120,000] of income after existing taxes.

1640 For example, a single person earning [lcu_130k: \$130,000][periodicity_tax: per year] after taxes would pay [lcu_1500: \$1,500] in additional taxes, or 15% of [lcu_10k: \$10,000] = [lcu_130k: \$130,000] – [lcu_120k: \$120,000]. Meanwhile, a married couple

1645 earning [lcu_200k: \$200,000][periodicity_tax: per year], [lcu_100k: \$100,000] for each of them, would go untaxed.

This tax would apply to the richest 1% of the world's population. [tax_country_name: In the United States], it would affect the richest [affected_top1: 8]% and redistribute [transfer_top1: 3]% of GDP to lower-income countries.

1650 **Do you support or oppose such a global tax on the richest people to finance global poverty reduction?**

Strongly oppose; Somewhat support; Strongly support; Somewhat oppose; Indifferent

1655 46. [Branch: top3] Currently, 3 billion people live in deep poverty, with less than [lcu_400: \$400][periodicity: per month].

The Sustainable Development Goals, adopted by all countries in 2015, aim to alleviate poverty and achieve access to healthcare, education, drinking water, and sanitation for all by 2030. Due to lack of funding, the world is not on track to meet these poverty reduction goals.

1660 **Poverty reduction could be funded by a global tax on individual income above [lcu_80k: \$80,000][periodicity_tax: per year].**

1665 **The tax rate would be 15% for every [currency: dollar] over [lcu_80k: \$80,000] of income after existing taxes, 30% over [lcu_120k: \$120,000], and 45% over [lcu_1M: \$1 million].**

1670 For example, a single person earning [lcu_90k: \$90,000][periodicity_tax: per year] after taxes would pay [lcu_1500_top3: \$1,500] in additional taxes, or 15% of [lcu_10k_top3: \$10,000] = [lcu_90k: \$90,000] – [lcu_80k: \$80,000]. Meanwhile, a married couple earning [lcu_150k: \$150,000][periodicity_tax: per year], [lcu_75k: \$75,000] for each of them, would go untaxed.

This tax would apply to the richest 3% of the world's population. [tax_country_name: In the United States], it would affect the richest [affected_top3: 18]% and redistribute [transfer_top3: 8]% of GDP to lower-income countries.

1675 **Do you support or oppose such a global tax on the richest people to finance global poverty reduction?**

[Section 2.4.2; Figures 7, S44-S45; top3_tax_support]

Strongly oppose; Somewhat support; Strongly support; Somewhat oppose; Indifferent

47. To show that you are attentive, please select "A little" in the following list: [attention_test]

1680

Not at all; A little; A lot; A great deal

Preferred transfer means to LICs

48. Below are different ways to transfer resources to help reduce poverty in a low-income country.

How do you evaluate each of these options?

1685

[Section 2.4.3; Figures S5, S47-S48; transfer_how] [Item order is randomly flipped or not]

- Transfers to public development aid agencies which then finance suitable projects
- Transfers to the national government conditioned on the use of funds for poverty reduction programs
- Unconditional transfers to the national government
- Unconditional transfers to local authorities (municipality, village chief...)
- Transfers to local NGOs with democratic decision-making processes
- Cash transfers to parents (child allowances), to the disabled and to the elderly
- Unconditional cash transfers to each household

1690

1695

A wrong way; An acceptable way; A right way; The best way

Radical redistribution

49. Should governments actively cooperate to have all countries converge in terms of GDP per capita by the end of the century? [Section 2.4.2; Figures 7, S49; convergence_support]
Yes; No; I prefer not to answer

1700

50. If there was a worldwide movement in favor of a global program to tackle climate change, implement taxes on millionaires and fund poverty reduction in low-income countries, to what extent would you be willing to be part of that movement? (Multiple answers possible) [Section 2.4.2; Figures 7, S50; global_movement]

I would not support such a movement.; I could sign a petition and spread ideas.; I could

1705 *attend a demonstration.; I could go on strike.; I could donate [amount_lottery: \$100] to a strike fund.*

51. [Except in: RU, SA] Let us call "your political party" the party you voted for in the last election, or the party that represents your views most closely.

1710 **Imagine there was a worldwide coalition of political parties in favor of a common program to tackle climate change, implement taxes on millionaires and fund poverty reduction in low-income countries.**

Would you be more likely to vote for your party if it were part of that coalition?

1715 [Section 2.4.2; Figures 7, S51; vote_intl_coalition] [Item order is randomly flipped or not]

*Yes, I would be **more likely** to vote for my party if it joined that coalition (or to vote for another party if only that other party joined the coalition).;*

*My choice would **not depend** on which parties are part of that coalition.;*

*No, I would be **less likely** to vote for my party if it joined that coalition.*

- 1720 52. Some people think that high-income countries should support low-income countries.

Among the different reasons given, which ones do you agree with? (Multiple answers possible) [Section 2.4.2; Figure S52; why_hic_help_lic] [Order of the first three items is randomized]

1725 *High-income countries have a historical responsibility for the current situation in low-income countries.;*

In the long run, it is in the interest of high-income countries to help low-income countries.;

Helping those in need is the right thing to do. This is also true at the international level.;

None of the above.

- 1730 53. [Only in: FR, DE, IT, ES, GB, US] Some people argue that Western countries owe reparations for colonization and slavery to former colonies and descendants of slaves. Reparations could take the form of funding education and facilitating technology transfers, to address unequal opportunities passed down from the past.

1735 **Do you support or oppose reparations of this kind for colonization and slavery?**

[Section 2.4.2; Figures 7, S53; reparations_support]

Strongly oppose; Somewhat oppose; Indifferent; Somewhat support; Strongly support

[Except in: RU] Custom redistribution

54. What is the [*periodicity_text*: yearly] income of your household **after taxes and social benefits**?

This includes all sources of income: salaries, pensions, allowances, welfare benefits, property income, etc.

My household earns ... [text_unit: \$ per year] (answer with no comma, no space, no period):

[income_exact]

55. [new page] If you could redistribute income at the global level, what would you do? In this question, we let you choose your preferred parameters for a redistribution of income at the world level.

If you prefer to skip this question, check the corresponding box at the bottom of the page.

The worldwide redistribution of income would take the form of additional policies, taxes, and transfers, on top of existing ones.

These policies would lower the income of the richest (the losers from the redistribution) and increase the income of the poorest (the winners).

Below you will find a graph of the world distribution of after-tax income and three sliders that vary it. The current distribution is in red, and your custom one is in green.

The first two sliders control the proportion of winners and the proportion of losers, among all humans. The third slider controls the degree of redistribution from the richest to the poorest.

If you do not want new policies to reduce global inequality, you can set the third slider to zero.

You need to move the sliders (by holding the mouse down on the little squares and moving to the side) to make the green curve evolve: the idea is to move the sliders **until you get a green curve you are satisfied with**.

Examples of income changes after your proposed redistribution:

Now	After
0 [text_unit: \$ per year]	[after_0] [text_unit: \$ per year]
[now_10k] [text_unit]	[after_10k] [text_unit]
[now_60k] [text_unit]	[after_60k] [text_unit]
[now_100k] [text_unit]	[after_100k] [text_unit]
Your <i>individual</i> income	
[own] [text_unit]	[after_own] [text_unit]

[Section 2.4.4; Figures 8, S55-S62] I am satisfied with my custom redistribution.;
I want to skip this question.

Well-being (for another project)

[Four random branches: *gallup_0*; *gallup_1*; *wvs_0*; *wvs_1*; *well_being*, *variant_well_being*]

56. [Branch: *gallup_0*] Please imagine a ladder, with steps numbered from 0 at the bottom to 10 at the top. The top of the ladder represents the best possible life for you and the bottom of the ladder represents the worst possible life for you.

On which step of the ladder would you say you personally feel you stand at this time? [*well_being_gallup_0*]

Worst possible 0; 1; 2; 3; 4; 5; 6; 7; 8; 9; Best possible 10

57. [Branch: *gallup_1*] Please imagine a ladder, with steps numbered from 1 at the bottom to 10 at the top. The top of the ladder represents the best possible life for you and the bottom of the ladder represents the worst possible life for you.

On which step of the ladder would you say you personally feel you stand at this time? [*well_being_gallup_1*]

Worst possible 1; 2; 3; 4; 5; 6; 7; 8; 9; Best possible 10

58. [Branch: *wvs_0*] All things considered, how satisfied are you with your life as a whole these days? [*well_being_wvs_0*]

Completely dissatisfied 0; 1; 2; 3; 4; 5; 6; 7; 8; 9; Completely satisfied 10

59. [Branch: wvs_1] All things considered, how satisfied are you with your life as a whole these days? [well_being_wvs_1]
Completely dissatisfied 1; 2; 3; 4; 5; 6; 7; 8; 9; Completely satisfied 10

Comprehension

- 1800 60. *Comprehension question: one respondent with the expected answer will get [amount_lottery: \$100].*

How would gasoline prices change as a result of the Global Climate Scheme?
Gasoline prices would... [Figure S63; gcs_comprehension] [Item order is randomly
1805 flipped or not]
increase; not be affected; decrease

Synthetic questions

61. To what extent do you agree or disagree with the following statement? "My taxes should go towards solving global problems." [Section 2.4.2; Figures 7, S64-S65; my_tax_global_nat.
1810 *Strongly agree; Agree; Neither agree nor disagree; Disagree; Strongly disagree*
62. Which group of people do you advocate for when you vote?⁵⁰ [Section 2.4.2; Figures S4, S66; group_defended]
Sentient beings (humans and animals); Humans; [country_adjective_plural: Americans]; People from my community (for example my region, my religion, my gender...); My family and myself
1815

Feedback

63. Do you feel that this survey was politically biased? [Figure S67; survey_biased]
Yes, left-wing biased; Yes, right-wing biased; No, I do not feel it was biased
64. The survey is nearing completion. You can now enter any comments, thoughts, or
1820 suggestions in the field below. [Figure S68; Random answers can be found on [anonymized for review]; comment_field] (Back to Section par:flow.)

⁵⁰In Russia and Saudi Arabia, the question was worded as follows: "Which group do you advocate for? For example, if you were the richest person on Earth, which group would you predominantly help with your money?". In Russia, the item *Russians* had to be replaced with *My compatriots*.

D Survey Sources and Features

D.1 Sources Regarding Plausible Global Policies

Table S1 provides references showing that the “plausible global policies” I test (Section 2.4.1) are (similar to proposals) debated in international negotiations.

Table S1: Proposals similar to the “plausible global policies” in international negotiations.

Proposal	Appearance in international negotiations and source
A minimum tax of 2% on the wealth of billionaires, in voluntary countries	Proposal by (2) in a report commissioned by the Brazilian presidency of the G20.
Raising the globally agreed minimum tax rate on profits of multinational firms from 15% to 35%, closing loopholes and allocating revenues to countries where sales are made	In the context of OECD/G20 discussions to address Base Erosion and Profit Shifting (BEPS), a similar proposal has been proposed by the Independent Commission for the Reform of International Corporate Taxation (3): taxing corporate income through formulary apportionment at a 25% rate.
Expanding the UN Security Council (in charge of peacekeeping) to new permanent members such as India, Brazil, and the African Union, and restricting the use of the veto	The Pact for the Future was adopted by the UN General Assembly. It includes “Action 39. We will reform the Security Council, recognizing the urgent need to make it more representative, inclusive, transparent, efficient, effective, democratic and accountable (...) we agree on the following guiding (...) Enlarge the Security Council (...) increase representation of developing countries (...) The question of the veto is a key element of Security Council reform. We will intensify efforts to reach an agreement on the future of the veto, including discussions on limiting its scope and use” (4).
Developed countries contributing at least 0.7% of their GDP in foreign aid and development assistance	This commitment has been made at the UN in 1971 and renewed ever since, e.g. in the SDG 17.2 (5, 6). In 2024, developed countries contributed 0.33% of their GNI in Official Development Assistance (7).

(continued)

Debt relief for vulnerable countries by suspending repayments until they are better able to repay, promoting their development

Institutions like the World Bank investing in many more sustainable projects in lower-income countries, and offering lower interest rates (the Bridgetown initiative)

Developed countries financing a fund to help vulnerable countries cope with loss and damage from climate change

Developed countries providing \$300 billion a year (0.4% of their GDP) to finance climate action in developing countries

An international levy on carbon emissions from shipping, funding national budgets in proportion to population

An international levy on carbon emissions from aviation, raising ticket prices by 30% and funding national budgets in proportion to population

At the Financing for Development conference, all countries (except the U.S.) have “recognize[d] the need to assist developing countries in attaining long-term debt sustainability through coordinated policies aimed at fostering debt financing, debt relief, debt restructuring and sound debt management” (8).

The (9) has been initiated by the government of Barbados and endorsed by the UN Secretary-General (10). It includes different proposals, including the rechanneling and new issuance of Special Drawing Rights to recapitalize Multilateral Development Banks.

The COP27 “decide[d] (...) to establish a fund for responding to loss and damage” (11), to which \$768 million have been pledged as of April 7, 2025.

COP29 adopted the NCQG and “decide[d] to set a goal, (...) with developed country Parties taking the lead, of at least USD 300 billion per year by 2035 for developing country Parties for climate action” (12).

The International Maritime Organization recently adopted a draft standard and feebate on carbon emissions from shipping (13). While countries still have to agree on the allocation of the revenue, a group of countries including China and Brazil proposed to allocate 30% for developing countries; Norway proposed to let the Green Climate Fund manage the revenue; and Germany that the revenue be used to “strengthen the green transition, in particular in the SIDS and LDCs.”

While more narrow in scope, in 2025, a “new aviation solidarity coalition on premium flyers (first- and business-class tickets, and private jets) has been launched by France, Kenya, Barbados, Spain, Somalia, Benin, Sierra Leone and Antigua & Barbuda. It will be supported by the European Commission, and the Global Solidarity Levies Task Force (...) The coalition aims to improve domestic revenue mobilization of developing countries and support international solidarity.”

D.2 Country-specific Features and Policies' Costs

In the survey, various features are tailored to country-specific characteristics. The workbook at [anonymized for review] contains all such features as well as their sources. In particular, it includes the following spreadsheets:

- Quotas: targets for each category based on frequencies among the adult population, as well as their sources (namely official statistical agencies) and the definition of regions. The coding of regions and urbanicity is done in Qualtrics based on zip codes; with the zipcode correspondences exported in the repository folder [anonymized for review] using code in [anonymized for review].
- Income, income_raw: brackets used in the income question (10), and associated sources and computations. I use household-level income Russia and the U.S.; equal-split income for Saudi Arabia; and equivalised income (i.e. standard of living, accounting for family composition) for other countries. Data sources are Eurostat for EU countries, Rosstat for Russia, WID for Saudi Arabia, Census Bureau for the U.S., and LIS for the other countries.
- Policies, policies_sources, policies_leaning, policies_party, policies_leaning_party: respectively the policies used in the conjoint experiment (Question 23), the source of each policy (i.e. the political program from which they come), their political leaning (classified manually as 0 if the policy is consistent only with a left-wing program, 2 for a right-wing one, and 1 otherwise), the party that proposed each policy, and their political leaning based on the party that proposed each policy.
- Elections: results at the last election (used in Questions 16-18) including abstention share among citizens, as well as classifications of the parties: whether they are major (i.e. obtained more than 5% of votes), and their political leaning (Left, Center-right or Right, Far right).
- Figures, features: country-specific figures used in the questionnaire, as detailed below.

Table S2 reports the figures used for each country for the National or Global Climate Scheme; the top income tax; and the revenue allocation of a wealth tax. Below, I detail the methodologies used for these and other questions.

Table S2: Country-specific features of the questionnaire.

Question; Feature	FR	DE	IT	PL	ES	GB	CH	JP	RU	SA	US
26 NCS amount_expenses (LCU/m.)	35	65	35	235	35	35	35	10k	5500	510	125

Climate Scheme. In the Climate Schemes, I assume a carbon price of \$95/tCO₂, corresponding to the price in 2025 for an emissions trajectory compatible with a global warming peaking at +1.8°C before 2100.⁵¹ After 2025, the decline in emissions is estimated to almost balance out the carbon price increase, in the sense that the GDP share of carbon pricing revenue would be roughly constant over the thirty years following the initial phase-in, before plummeting as net-zero approaches (14). In other words, the cost of climate schemes provided to the respondents reflects the direct monetary costs expected from a carbon price aligned with the Paris Agreement.

In the National Climate Scheme, the average increase in expenditures is equal to the carbon price multiplied by the country’s emissions per capita,⁵² and corresponds to the equal cash transfer each person would receive (Question 26). Relative to the country’s GDP per capita, this translates into the price increase reported in the Global Climate Scheme (GCS). To compute the amount lost, i.e. the net cost of the GCS for the average person in the country (Question 28), I subtract the equal cash transfer from the increase in expenditures.

In case of a strictly equal per adult allocation of carbon price revenue, the global ba-

⁵¹More precisely, I use the price trajectory of the integrated assessment model IMAGE in the scenario SSP2-2.6, as given by the IIASA.

⁵²I use territorial CO₂ emissions from non-LULUCF by country from (15). I use the same source to estimate the emissions covered by the different scenarios in the International Climate Scheme.

1875 sic income would amount to \$45 per month, corresponding to the world average emis-
sions multiplied by the carbon price. However, to prevent highly emitting middle-income
countries from losing financially, the GCS departs from the egalitarian allocation by of-
fering them a waiver from the mutualization of revenue, thereby lowering cash transfers
1880 in other countries (16). When the country coverage is *global*, as is implicitly the case in
questionnaires for Russia, Saudi Arabia, and the U.S., this results in a global basic income
of \$36 per month. In European countries and Japan, the cash transfer is even lower, at \$22
per month, since I implicitly assume a *high* country coverage (cf. Figure 2) that excludes
countries with the greatest emissions per capita. As I conservatively use low figures for
the cash transfer, the GCS question could somewhat underestimate acceptance of a global,
egalitarian cap-and-trade in high-income countries.

Global Income Distribution. To estimate the global income distribution, I use the dis-
tributions of disposable income by country in 2019 constructed by (17) (FPG).⁵³ I inflate
1885 all generalized percentiles by real GDP growth observed between 2019 and 2024 (using
IMF data), factor in country-specific inflation until 2022 and convert values from LCU to
2022 PPP dollars (using FPG), and finally assume that all countries experienced the same
inflation as in the U.S. in 2023 and 2024 (using IMF data).

To aggregate country distributions, I compute the global cumulative distribution func-
1890 tion and interpolate it at each thousandile. I obtain the global distribution of disposable
income at purchasing power parity (PPP) in 2024.

I use this distribution for the custom redistribution task, after converting back to LCU
(Section 2.4.4, Question 55). I also use it to calibrate the top income tax schedules so that
they raise an amount equivalent to the poverty gap (Section 2.4.2, Questions 45-46). Then,
1895 I use country-level data to estimate the share of GDP collected as well as the share of the
population affected by each tax in each country. Finally, I compute the poverty gaps and
the tax revenue in every country in proportion to GDP, and aggregate them at the global
level after converting national disposable income back to market exchange rates (using
World Bank's PPP conversion factors for 2022). I find that the top 1% tax collects 1.8%
1900 of global nominal income, while the top 3% tax collects 4.8% of global nominal income.
These amounts are higher than the respective poverty gaps: 1.3% of global nominal in-
come for a \$250 per month poverty line, and 3.2% for a \$400 per month poverty line.
While the cost of poverty reduction declines relative to tax revenue once one accounts

⁵³The data is available on Amory Gethin's [website](#).

for market exchange rates, closing the poverty gap actually requires extra revenue due to imperfect targeting and administrative costs (18). Therefore, the tax schedule calibrations are consistent with the poverty reduction objectives.

Wealth Tax Revenue. To estimate the revenue from a global tax on wealth above \$5 million at a rate of 2% (Section 2.1.2, Questions 24-25), I use the distribution of net wealth by country in current dollar for 2022 from the World Inequality Database. I assume that the taxable base is reduced by 30% due to tax avoidance and asset depreciation. I report expected tax revenue as a share of countries' 2023 GNI (from the World Bank). I also report the absolute revenue after converting them into LCU.

Sustainable future; aviation levy. I assume a carbon price of \$300/tCO₂. Given natural gas footprint at .1807 tCO₂/MWh, this carbon price would double a gas price of \$54/MWh, which is a midpoint between U.S. and European prices. Similarly, the prices of beef and flights would double, assuming that beef costs \$10/kg and emits 33 kgCO₂e/kg, and aviation emits 3 kgCO₂e per dollar of flight. A 30% increase in flight prices corresponds to a carbon price of \$100/tCO₂, or to a \$300/t levy which does not account for the warming effect of contrails (19).

NCQG. The sources used for the New Collective Quantified goal of climate finance for 2035 (Section 2.4.1, Questions 39-40) are the following: (12) states the goal itself, (20) provides figures on past achievements, (21) reports the positions of India and other countries, and (22, 23) those of NGOs. Note that the question wordings do not mention the gap between climate finance needs and the official goal identified in official reports (24, 25), nor that existing plans by Multilateral Development Banks (MDBs) to ramp up climate finance would achieve most of the new goal (26).⁵⁴

To express the NCQG as a share of developed countries' GDP, I use 2024 data from the World Bank on nominal GDP in high-income countries. This figure —of \$70 trillion— is

⁵⁴According to the (20), MDBs contributed \$81 billion to climate finance in 2022 (both directly through finance provision and indirectly through mobilization of the private sector), with 71% (or \$58 billion) attributable to developed countries. Before the NCQG was agreed at COP29, they jointly stated that they will contribute an estimated \$185 billion in 2030 (including \$65 billion from the private sector). Assuming that this increase of \$104 billion is replicated in the period 2030-2035, MDBs would contribute \$289 billion in 2035, including \$205 attributable to developed countries, that is \$147 billion more than in 2022. As (multilateral plus unilateral) developed countries' climate finance totaled \$116 billion in 2024, adding the \$147 billion expected in their multilateral finance would achieve three-quarter of the required increase, at \$263 billion.

conservative, since it does not account for growth or inflation until 2035.

D.3 Definition of Keywords

Below are the keywords used to classify the open-ended fields on top-of-mind considerations (Figure S7, Section 2.1.1, Questions 19-22). The keyword search uses the R function `grep1` and ignores case. The special character `^` indicates the start of the string and `$` the end. (Back to Section 2.1.1.)

- **Money; own income; cost of living; inflation:** money|inflation|price|wage|wealth|income|salar|finance|cost|financial|afford|millionaire|expensive;
- **Relationships; love; emotions:** relationship|husband|wife|love|partner|emotion;
- **Work; (un)employment; business:** business|work|employ|job;
- **Poverty; inequality:** poverty|inequalit|poor|social justice;
- **Global poverty; hunger; global inequality:** global poverty|global inequal|hunger|drinking water|starv;
- **Health; healthcare system:** health|sick|disease|NHS|medica;
- **Criticism of immigration; national preference:** migration|migrant|asylum|refugee|alien;
- **Corruption; criticism of the government:** corruption;
- **Environment; climate change:** environment|climat|pollution|warming|drought;
- **Security; violence; crime; judicial system:** safe|murder|crime|criminal|fraud|rape|terrorism;
- **Discrimination; gender inequality; racism; LGBT:** gender|raci|scrimination|women|xenophob|LGB|machism|antisemit;

- **Youth:** young|youth .

(Back to Section [2.1.1.](#))

D.4 Exploratory Factor Analysis

2000 To construct a latent variable of support for global redistribution, I proceed in three steps. First, I standardize each variable of support by converting them into z-scores, by subtracting the sample average and then dividing the result by the standard error. Both

the mean and the standard error are computed using survey weights on the global sample. Second, I run an exploratory factor analysis (EFA) with one factor, to obtain the *loadings*, i.e. the weight of each variable in the latent factor (reported in Table S3). Third, I average all z-scores, weighted by the loadings.

Table S3: Loadings from the Exploratory Factor Analysis

Variable name	Loading		
share_solidarity_diff	0.991	convergence_support	0.456
share_solidarity_ratio	0.926	reparations_support	0.431
share_pl_supported	0.901	how_agencies	0.428
share_solidarity_opposed	-0.852	how_govt_conditional	0.402
pl_support_loss_damage	0.800	sustainable_future	0.395
pl_support_ncqg_300bn	0.792	how_ngo	0.388
pl_support_foreign_aid	0.767	ncqg	0.385
pl_support_shipping_levy	0.759	global_movement_spread	0.357
pl_support_bridgetown	0.736	how_social_protection	0.323
pl_support_debt_relief	0.724	universalist	0.306
pl_support_un_reform	0.684	help_lic_duty	0.298
pl_support_aviation_levy	0.675	ncs_support	0.268
pl_support_billionaire_tax	0.670	help_lic_responsibility	0.267
pl_support_corporate_tax	0.669	global_movement_donate	0.258
top_tax_support	0.564	help_lic_interest	0.257
my_tax_global_nation	0.536	ncqg_fusion	0.249
vote_intl_coalition	0.533	global_movement_demonstrate	0.239
ics_support	0.522	how_local_authorities	0.230
global_movement_no	-0.522	how_govt_unconditional	0.226
wealth_tax_support	0.489	how_cash_unconditional	0.224
gcs_support	0.483	nationalist	-0.219
help_lic_none	-0.464	revenue_split_few_global	0.200
		global_movement_strike	0.158
		individualist	-0.153
		humanist	0.140

Note: Some variable names have been shortened: I shortened occurrences of help_lic into why_hic_help_lic, solidarity_support into pl_support, and expanding_security_council into un_reform.

The loading of a variable is similar to the average absolute correlation with the other support variables. Interestingly, the average absolute correlation of the latent indicator,

at .54, is only marginally greater than that of `share_solidarity_diff` (the difference between the shares of plausible policies supported and opposed), at .49, or that of the share of plausible policies supported, at .45. In other words, simple indicators based on the support or opposition to plausible policies capture attitudes towards global redistribution almost as well as a sophisticated latent variable.

I constructed another latent variable of support, using a full-information item factor analysis, based on multidimensional item response theory (MIRT). Unlike the EFA, MIRT does not assume that levels in a Likert-scale are spaced one unit apart; instead, it estimates parameters encoding the Likert scale that best account for latent support. The correlation between the two latent variables is extremely high (0.98). Therefore, although MIRT is a more accurate method, I use EFA because its results are more transparent to describe. (Back to Section [2.4.1](#).)

E Representativeness of the Surveys

Table S4: Sample representativeness overall, in Europe, and in the European Union.

(Back to Section 4.)

G The Determination of a Custom Redistribution

In Question 55, respondents are asked for their preferred redistribution of the world's post-tax income. This custom redistribution is determined by modifying the current distribution using the respondent's three input parameters.⁵⁵

- The *proportion of winners*, i.e. the share of people (at the bottom of the distribution) advantaged by the custom redistribution;
- The *proportion of losers*, i.e. the share of people (at the top) disadvantaged by the redistribution;
- The *degree of redistribution*, ranging from 0/10 (no redistribution) to 10/10 (maximal redistribution).

The determination of the custom distribution given these parameters relies on the algorithm *Dis/adv* introduced by (27). In that paper, (27) surveyed two representative samples of French respondents. The first survey uncovered the median preferred parameters for a national income redistribution.⁵⁶ The second survey showed that 52% supported the income redistribution defined using these parameters while only 26% opposed it. Furthermore, a majority among the French respondents who expressed an opinion agreed that it is a good idea to “determine the citizens’ preferred tax schedule from a survey and then submit the proposal that would emerge from the survey to a referendum.” Therefore, the algorithm *Dis/adv* applied to median preferred parameters has been validated both through the support for the resulting redistribution and through the support for such democratic method of preference aggregation to determine an income redistribution. Nonetheless, the algorithm *Dis/adv* is just a first attempt to adjust the tax schedule by aggregating citizens’ preferences, and more appropriate methods may be proposed. Although (27) finds that the algorithm *Dis/adv* fares better than another algorithm tested, the method still suffers from some limitations. In particular, the current method is difficult to understand for the users, and it only allows for redistribution from the rich to the

⁵⁵Overall, 35% of the respondents did not move the sliders from their original position. Excluding the 39% of them who still state that they are satisfied with the redistribution does not change the results qualitatively. Indeed, the average responses are similar between satisfied respondents who moved the sliders and all satisfied respondents: the shares of winners or losers, the implied minimum income or transfer all differ by less than 8%. Therefore, I keep all satisfied respondents in the analysis.

⁵⁶The median preferred proportions of winners and losers were 50% and 10%, respectively. The median preferred degree of redistribution was defined indirectly, using the median preferred demogrant: €800/month. The resulting redistribution entailed 12% of GDP redistributed from the top 10% to the bottom 50%.

poor (it would thus be inappropriate if the level of inequality were considered too low). Below, I describe the algorithm *Dis/adv*, available for use at [anonymized for review], and implemented in the R function `algo_dis_av` at [anonymized for review].

Algorithm Dis/Adv It is worth recalling that over a range of income (concerning people who are neither winner nor loser from the reform), both the current and custom distributions coincide. The algorithm proceeds as follows:

1. Define the *extreme distribution* as the current distribution bounded by the income thresholds of winners and losers. In other words, draw two horizontal lines at each end of the distribution, by setting the incomes of winners to the income of the richest winner, and those of losers to the income of the poorest loser.
2. Compute what can be redistributed on either side as the area between the extreme and current distributions: what can be given to winners on the left side (L) or taken on the right side (R). If and only if what can be given is lower than what can be taken ($L < R$, as in Figure S73), the left side is binding, and it determines the *amount transferred* from the rich to the poor: $\min\{L; R\} \cdot \text{degree}$.
3. On the binding side, define the custom distribution as a linear mixture between the current and extreme distributions, with the mixture parameter set by the *degree of redistribution*. In other words, starting from the current distribution, narrow the gap with the extreme distribution by a factor *degree*.

Figure S73: Algorithm for the custom redistribution, with parameters *winners*: 60%, *losers*: 20%, *degree*: 4/10.

4. Adjust the non-binding side by narrowing the gap with the extreme distribution, using the unique mixture parameter that preserves aggregate income (so that the amount transferred is the same on both sides).⁵⁷

2075 5. [Optional step, used in the survey.] To increase the demogrant (i.e. the lowest income) and make the reform more progressive on the left side, try to replace the left side with a straight line. In other words, find the demogrant and the straight line between the demogrant and the threshold of winners that respects the amount transferred. If this straight line crosses the current distribution or if it implies a
2080 regressive redistribution (in that some incomes would increase less than higher incomes), abandon the straight line and keep the custom redistribution as is.

Once the custom redistribution has been determined, it is straightforward to compute the additional tax schedule required to attain it.⁵⁸ Figure S74 presents the tax schedule required to attain the average custom redistribution (weighted over all respondents). Figure
2085 S74 shows that (on the losers' side) this redistribution can be approximated by additional marginal tax rates of 7% above \$25,000 per year, and 16% above \$40,000. Figure S74 also compares this tax schedule with those associated with the radical income redistribution tested in Questions 45-46: While the average custom redistribution features a much larger tax base than the radical tax targeting the top 3% (as it taxes the top 28%), its top tax rate
2090 is three times lower, so that the two redistributions entail similar transfers from the rich to the poor, at around 5% of the world's income. (Back to Section 2.4.4.)

⁵⁷While we do not account for behavioral responses, one can adjust the algorithm to account for them. It suffices to define a post-reform aggregate income, which can be lower than the pre-reform one if the reform disincentivizes economic activity.

⁵⁸For a sophisticated calculation of the required tax schedule, which allows for behavioral responses and a gradual implementation, see Appendix IX of (27).

Figure S74: Additional tax schedule associated with the radical and custom redistributions. (Questions [45-46](#), [55](#)).

Observations	11,839	11,000	11,000	12,001	11,993	11,993
R ²	0.001	0.00004	0.00001	0.0001	0.001	0.001

Note:

*p<0.1; **p<0.05; ***p<0.01

Table S14 shows that in two cases (out of thirteen), treatments are significantly correlated with unrelated outcomes later in the survey, with an effect size up to 3 p.p. While these framing effects are undesirable, their magnitude is limited. Indeed, the average value of affected outcomes always remain within ± 2 p.p. of the value it is estimated to have had if any treatment had been generalized. (Back to Section 4.)

K Main Results on Selected Demographics, Including Vote

Figures S75–S77 show that polarization between left- and right-wing voters is comparably high in Europe and the U.S. but almost non-existent in Japan, with Japanese support comparable to the support among non-voters in Western countries. Interestingly, although (28) exhibited much higher polarization in the U.S. compared to Western Europe on similar questions (about the GCS, the globally redistributive millionaire tax, and universalism), in the current survey polarization has converged in the two regions. More specifically, compared to early 2023, in Western Europe (France, Germany, Spain and the UK), support has declined across the political spectrum, but more so among right-wing voters. Meanwhile, in the U.S., support has increased among Republican voters and decreased among Democrat voters.

Figure S75: [On selected vote or nationality] Support for global redistribution action/policies.

	All	Europe Non-voters	Europe Left	Europe Center/Right	Europe Far right	Japan Non-voters	Japan Left	Japan Center/Right	Saudi Arabia	Saudi citizens	U.S. Non-voters	U.S. Harris	U.S. Trump
Supports the National Climate Scheme	68	65	80	64	47	69	69	70	88	91	64	79	50
Global climate scheme (GCS)	55	61	77	60	46	48	61	57	85	85	54	58	35
Supports Int'l Climate Scheme (any variant)	66	67	85	71	55	61	75	69	88	91	63	75	43
Supports int'l tax on millionaires with 30% funding LICs (any variant)	70	72	89	68	59	60	74	68	83	83	69	79	50
Supports tax on world top 1% to finance global poverty reduction (Additional 15% tax on income over [\$120k/year in PPP])	56	58	81	50	48	36	51	45	68	74	50	64	37
Supports tax on world top 3% to finance global poverty reduction (Additional 15% tax over [\$80k], 30% over [\$120k], 45% over [\$1M])	50	51	72	50	44	34	46	31	67	74	46	57	34
Prefers sustainable future	68	68	83	70	54	74	81	76	72	70	67	78	43
"Governments should actively cooperate to have all countries converge in terms of GDP per capita by the end of the century"	70	79	88	75	66	73	73	69	93	94	69	69	44
Would support a global movement to tackle CC, tax millionaires, and fund LICs (either petition, demonstrate, strike, or donate)	68	71	89	64	58	43	70	58	73	74	64	83	47
More likely to vote for party if part of worldwide coalition for climate action and global redistribution	36	35	61	33	27	16	31	22	NA	NA	28	52	27
Supports reparations for colonization and slavery in the form of funding education and technology transfers	35	39	54	30	24	NA	NA	NA	NA	NA	31	45	17
"My taxes should go towards solving global problems"	41	38	61	40	30	28	38	33	67	70	36	54	27

(Back to Section 4.)

Figures S79-S82 show that support for global redistribution is higher among younger, poorer, or more urban people, though the differences are not as large as those between voters of different political orientations. Note that in the following figures, the bottom or top income shares are defined at the national level.

Figure S79: [On selected demographics] Support for global redistribution action/policies.

	All	Bottom 50% income	Top 50% income	Top 20% income	Millionaire	Self/parent born abroad	Non-tertiary diploma	Tertiary diploma	Cities urbanicity	Age < 35	Age 35-49	Age > 50	Man
Supports the National Climate Scheme	68	69	67	66	58	73	67	69	68	76	69	63	65
Global climate scheme (GCS)	55	57	54	54	45	62	54	57	56	67	55	49	56
Supports int'l climate scheme (any variant)	66	66	65	65	58	72	64	68	67	74	64	62	66
Supports int'l tax on millionaires with 30% funding LICs (any variant)	70	74	67	62	43	74	72	68	69	77	70	67	69
Supports tax on world top 1% to finance global poverty reduction (Additional 15% tax on income over [\$120k/year in PPP])	56	60	52	47	39	60	56	56	53	61	55	54	55
Supports tax on world top 3% to finance global poverty reduction (Additional 15% tax over [\$80k], 30% over [\$120k], 45% over [\$1M])	50	55	46	43	32	56	52	49	47	56	50	48	49
Prefers sustainable future	68	68	68	68	62	71	67	70	68	71	67	67	65
"Governments should actively cooperate to have all countries converge in terms of GDP per capita by the end of the century"	70	74	67	63	50	71	73	67	66	76	71	68	68
Would support a global movement to tackle CC, tax millionaires, and fund LICs (either petition, demonstrate, strike, or donate)	68	71	64	62	52	72	67	68	67	78	68	62	67
More likely to vote for party if part of worldwide coalition for climate action and global redistribution	36	37	36	36	30	41	34	40	36	46	35	32	38
Supports reparations for colonization and slavery in the form of funding education and technology transfers	35	37	33	34	26	40	33	37	36	41	34	31	36
"My taxes should go towards solving global problems"	41	40	42	44	39	49	38	45	42	54	42	34	42

(Back to Section 4.)

Figure S80: [On selected demographics] Acceptance of plausible global redistribution policies (Percentage of *Somewhat* or *Strongly* support among non-*Indifferent* responses).

	All	Bottom 50% income	Top 50% income	Top 20% income	Millionaire	Self/parent born abroad	Non-tertiary diploma	Tertiary diploma	Cities urbanicity	Age < 35	Age 35–49	Age > 50	Man
Minimum tax of 2% on billionaires' wealth, in voluntary countries	81	83	79	75	64	85	81	81	80	81	81	81	79
Bridgetown initiative: MDBs expanding sustainable investments in LICs, and at lower interest rates	79	80	79	77	74	84	77	81	79	80	79	79	79
L&D: Developed countries financing a fund to help vulnerable countries cope with climate Loss and damage	75	77	73	71	64	80	74	76	73	77	75	74	73
International levy on shipping carbon emissions, returned to countries based on population	70	70	70	67	60	75	69	71	70	75	69	68	67
At least 0.7% of developed countries' GDP in foreign aid	70	73	67	65	63	76	70	70	68	72	70	69	69
Debt relief for vulnerable countries, suspending payments until they are more able to repay	70	74	66	63	55	75	69	71	70	76	70	66	69
Expand Security Council to new permanent members (e.g. India, Brazil, African Union), restrict veto use	69	70	69	68	62	76	68	71	71	71	68	70	69
NCQG: Developing countries providing \$300 bn a year in climate finance for developing countries	68	70	66	65	55	75	68	68	65	73	68	66	68
Raise global minimum tax on profit from 15% to 35%, allocating revenues to countries based on sales	68	70	67	63	61	72	66	71	70	66	68	69	68
International levy on aviation carbon emissions, raising prices by 30%, returned to countries based on population	53	54	51	50	46	58	51	54	53	57	52	51	52

Figure S81: [On selected demographics] Average synthetic indicators of support for global redistribution. (Question 38).

	All	Bottom 50% income	Top 50% income	Top 20% income	Millionaire	Self/parent born abroad	Non-tertiary diploma	Tertiary diploma	Cities urbanicity	Age < 35	Age 35–49	Age > 50	Man
Latent support for global redistribution (standardized)	0.00	0.05	-0.05	-0.07	-0.32	0.15	-0.04	0.05	-0.02	0.17	0.01	-0.09	-0.01
Share of plausible global policies supported	0.51	0.50	0.52	0.52	0.51	0.57	0.48	0.55	0.50	0.51	0.50	0.51	0.52
Share of plausible global policies opposed	0.21	0.19	0.23	0.23	0.32	0.19	0.21	0.21	0.21	0.19	0.20	0.22	0.22
Difference between share of plausible policies supported and opposed	0.30	0.31	0.29	0.29	0.19	0.37	0.27	0.34	0.29	0.32	0.30	0.29	0.29
Ratio of share of plausible policies supported over supported or opposed	0.70	0.72	0.69	0.68	0.61	0.73	0.69	0.72	0.70	0.72	0.70	0.69	0.69
